Magnus RFID – next generation

The application of Magnus RFID sensors can be extremely wide thanks to the compact and versatile design.

The different design and technology options as well as the complete mechanical compatibility with the Magnus MG magnetic sensors series, make this product extremely valuable for users.

The RFID technology enables Magnus RFID sensors to be individually coded in three different ways to allow the appropriate tampering protection in all applications. The highest configurations allow each sensor to be paired with one only assigned actuator.

The RFID technology used allows to reach safety levels up to PL e/SIL 3 also when connecting the sensors in series.

As a result, Magnus RFID sensors can be simply integrated in existing safety scenarios, offering a cost-effective solution for modifying and upgrading machines.

Typical applications

Magnus RFID is the ideal choice for many industrial applications, including ...

... food & beverage, packaging, pharmaceuticals, printing, paper, logistics, renewable energies, chemicals, injection moulding and many more ...

Quality, reliability and an extensive range to fit all applications

Cost-effective and reliable solutions

Multiple options of actuation technology

Individual coding

The actuator is programmed via teach-in and permanently assigned to the sensor during set-up (the process can be repeated if necessary).

Unique coding

The actuator is permanently assigned to the sensor during manufacturing (it cannot be replaced with another actuator).

Actuator coded

The actuator is free and not specifically assigned to the sensor (one actuator can work with multiple sensors).
