Sensors

VISOR®

*SensoPart sets new standards for industrial sensors with the optoelectronic sensors of the **F 10, F 25** and **F 55** series: all three housing sizes share excellent optical performance data, very precisely adjustable background suppression, intuitive and comfortable operation, and excellent quality – made in Germany. And our application-specific pre-configured – and thus immediately usable – all-in-one solutions in the **VISOR®** series show what is now possible in the vision segment.*

SENSOPART

Product news

VISOR® object sensor V20 Advanced

from Page 64

Vision sensors for object detection and classification

- *Highly accurate evaluation via 1.3 megapixel chip*

- *255 inspection tasks available, 255 evaluations can be used for each inspection task*

VISOR® Color

from Page 80

Improved object detection through additional colour information

- *Highly accurate evaluation via 1.3 megapixel colour chip*

- *Powerful colour detection, even with the smallest of colour nuances or self-illuminating components*

- *255 inspection tasks available, 255 evaluations can be used for each inspection task*

Eyesight vision system V20 Advanced

from Page 108

Complete image-processing package with robust and flexible smart camera

- *Highly accurate evaluation via 1.3 megapixel (colour) chip*

- *No limitation of inspection tasks (40 MB)*

F 10 – sub-miniature sensors as LED variant

from Page 226

For installation in the smallest of spaces and in moving machine parts

- *High performance – small dimensions*

- *Special variant for detection of dark blue objects*

Determing coil thickness – FT 55 Time-of-flight sensors

Correctly positioned? – VISOR® vision sensors

Fits into a robot arm – F 10 sub-miniature sensors

Reliable colour detection in a miniature housing– FT 25-C

All LEDs in the right place? – VISOR® Color

Dancer roll regulation – FT 25-RA

FT 25-RA – sub-mininiature distance sensor
from Page 148

For control tasks such as dancer roll regulation on automatic winding machines thanks to high repeatability

- *Operating range (scanning distance) from 20 mm to 200 mm*
- *Simple integration thanks to small housings*
- *Analogue output 0 … 10 V*

FT 25 C – miniature RGB colour sensor
from Page 190

Smallest RGB colour sensor with a high switching frequency of ≤10 kHz for rapid applications

- *Reliable detection of "non-colours", e. g. black, white and grey*
- *Very small and precise light spot for the detection of the smallest of marks*

FR 25/55-RLO – autocollimation photoelectric sensors
from Page 266/300

The specialists for small-part and front-edge detection

- *Detection possible from range zero*
- *High switching accuracy and positioning accuracy on lateral object approach*
F 55 – time-of-flight sensors
from Page 166

*Compact sensors for distance measurement and object detection*

- *For measurement, regulatory and detection tasks on all object surfaces at large distances*
- *Reliable object detection even with bright, highly reflective or shiny backgrounds*

made in Germany

Vision with foresight

At SensoPart we already anticipate the future of automation

"Our standard is not what is possible today, but the vision of what will be achievable in future" – this has been our credo since the founding of SensoPart in 1994. Our aim is to remain one step ahead and be able to offer our customers the most innovative products on the market.

When we have identified a path as correct we follow it consistently. As a family-run German company we can act independently and as we see fit – a major prerequisite for the extremely successful development that SensoPart has achieved since its start.

Successful products, now considered indispensable for modern factory automation, have been created from the many future-oriented ideas of earlier days. But we do not simply rest on our laurels – because we still have many ideas for the future.

Milestones in the company's history

1994 Founding of SensoPart Industriesensorik GmbH in Wieden, in the Black Forest

1999 Founding of SensoPart France SARL

2002 Special prize for young companies, awarded by state of Baden-Württemberg

2nd place: German Sensor Application Prize **2003**

1997 Founding of SensoPart UK Ltd

2001 Opening of second site in Gottenheim near Freiburg-im-Breisgau

2001 Baden-Württemberg Innovation Prize

"Dependability, responsibility and trust"

SensoPart is a family-run German company and this also influences our attitude towards work: we believe that dependability is important, we take responsibility for our activities, and we value close and trusting relations within the company as well as with our customers and business partners.

Dr. Theodor Wanner,
Founder and Managing Director of SensoPart

2004	1st place: German Sensor Application Prize	2006	Baden-Württemberg Innovation Prize				20 years of SensoPart	2014
2004	Founding of SensoPart Inc., USA			2009	Freiburg Innovation Prize	2012	Founding of SensoPart China	
		2005	Expansion of new building in Gottenheim	2008	"Top 100" Innovation Prize			
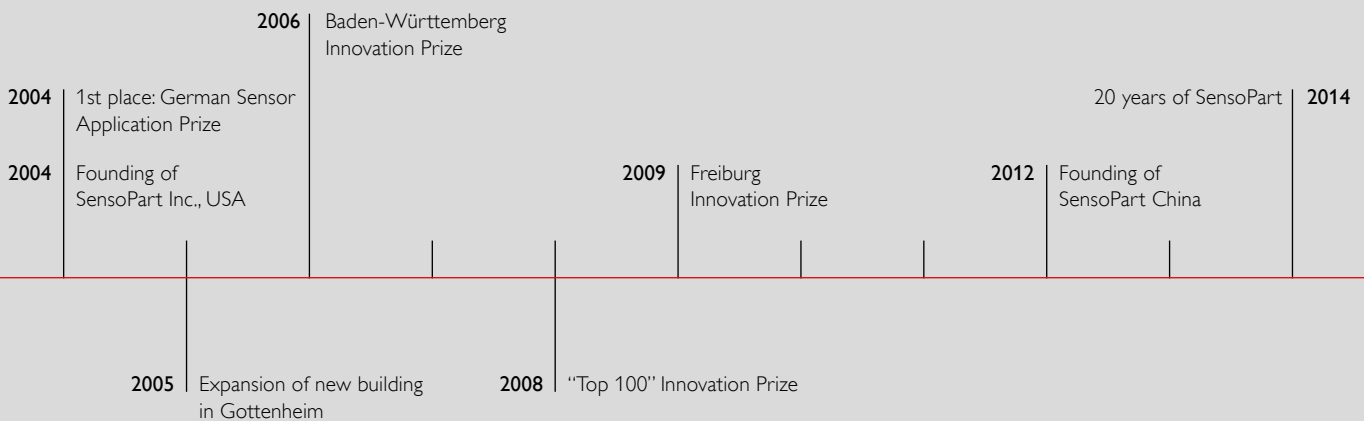

Innovations made in Germany

Future-oriented solutions are created at SensoPart – and developed and produced at our Gottenheim and Wieden sites

Those entering the new SensoPart buildings in Gottenheim near Freiburg immediately notice that this is an innovative, open company. This first impression of order and transparency is confirmed by a glance at our production facilities: everything is in the right place here and everyone knows what they are doing. The result is the famous quality "made in Germany", of which we at SensoPart are particularly proud.

Less obvious, but nevertheless decisive for the whole, is our development department. We do everything to give new ideas and innovations space here. Regardless of whether the optimisation of a product's functional detail is involved or whether it is necessary to come up with a completely new product family, our development engineers are committed with a lot of energy and great expertise. Numerous Innovation Prizes in recent years document this: with success!

Milestones of product development

1994
FMH 18: the first proximity sensor in a cylindrical housing with very precisely adjustable background suppression, achieved via a 12-step potentiometer

1995
FT 50: scanner with adjustable background suppression and analogue switching point indicator, with rotatable plug

1996/1997
FT 20: smallest photoelectric proximity sensor with LED or laser light, adjustable background suppression and teach-in

1998
FT 50 C: the world's smallest colour sensor with white light LED and spectral colour separation with innovative tube prism system

1999
F 90: laser distance sensor with long range, light time-of-flight measurement and an adjustment laser that can be switched off

2003
FT 50 RLA: laser distance sensor (triangulation process) with excellent measurement properties and many supplementary functions

At SensoPart we follow the principle of lean production – characterised by maximum flexibility and efficiency, as well as the economical use of resources.

2006/2008
FA 45/46: vision sensors in compact industry-oriented housings (IP 67) with built-in lens and integrated illumination

2009
FT 55: family with laser photoelectric proximity sensors with highly precise, adjustable background suppression, in plastic or stainless steel housings (IP 69K)

2010
FT 10: the world's smallest laser proximity sensor with highly precise, adjustable background suppression, and suppression of interference

2011
F 25: variant-rich series of powerful and robust miniature sensors with highly precise, adjustable background suppression

2011
VISOR®: user-friendly vision sensor with particularly powerful image processing and expanded functionality

From practical experience, for practical use

We are near our customers – all over the world

Innovative, flexible and practical – this is SensoPart. We have already brought many innovative solutions to fruition in collaboration with our customers in Germany and abroad. Our sensor specialists know exactly what industry needs and maintain close personal exchanges with users. This allows the creation of consistently practical products and solutions that compete successfully on the market.

It is indeed true that selection of the right sensor, the optimum illumination and the appropriate configuration can sometimes be a science in itself. So it is all the more important that our customers can rely on our expertise and active support. Because only practical use shows the value of a good and partnership-based collaboration.

Sectors and applications

Automotive and supplier industries

Machine and plant construction

Food and beverages industries

Pharmaceutical and cosmetics industries

More than sensors

Customer service is a matter of
course at SensoPart

SensoPart not only sells sensors, but is also available for its customers before and after delivery of the product. We listen and are pleased to offer our comprehensive specialist knowledge and experience in industrial automation. For every customer requirement, however specialised, we find an effective and practical solution together.

Another advantage for our customers is that, at SensoPart, one hand knows what the other is doing. As a medium-sized company, we are sufficiently large to be able to achieve a lot but also flexible enough to react quickly. Thus our customers can always find a contact who knows exactly what is going on and can deal with their enquiry – as a matter of course.

Range of services for our customers

| Technical feasibility analyses | Product and application consulting |
| Application support | Development support | After-sales support |

Technology is important, but people are what matter for creating a successful business partnership. This is why we place great value on a personal, trusting relationship with our customers. Our personnel always have a sympathetic ear for questions and problems, and are delighted to be able to help with words and deeds.

We are the future

Sustainable corporate development is a top priority at SensoPart

Forward-looking thinking and action are self-evident at SensoPart because they are the prerequisites for success – not just today, but also in the future. On the one hand, this involves environmentally friendly manufacturing techniques in line with the principle of lean production: all our processes are characterised by maximum efficiency, the responsible use of resources, and the consistent recycling of production waste.

Sustainability, on the other hand, means that we do everything possible to maintain our innovative capability. This is why we invest double the sector average on research and development. And we ensure that we will also have good personnel in future: about one-tenth of our workforce are trainees and students from the Baden-Württemberg Cooperative State University (DHBW). Some of them will, we are certain, make a lasting impression on the future of industrial sensors.

We take environmental protection seriously: solar collectors on the roof of our buildings in Gottenheim generate, on average, more electricity than is required by our production plants.

It's set up!

VISOR®. The vision sensor for fast implementation.

Unpack, set up and run – never before have vision sensors been so powerful and so easily and intuitively operated. The VISOR® is ready for operation in just ten minutes with a few mouse clicks. With VISOR® technology from SensoPart there is now a simple and effective solution for even the most difficult of automation tasks. Whether objects with complex shapes, colour detection, data matrix codes, self-illuminating display elements, or edge breakouts on solar cells – our application-specific vision sensors reliably detect all relevant object features.

Housings
Integrated evaluation unit with powerful signal processor, IP 67 enclosure rating, vibration-proof

Mounting
Simple and flexible mounting thanks to dovetail

Illumination
Integrated LED illumination (white, red, infrared, UV)

Interfaces
Integrated communication interfaces (Ethernet, serial interfaces, digital I/O)

Lens
Integrated lens or C-mount variants for long distances

Unmasked!

Regardless of if black, white or brightly coloured – our sensors miss nothing.

Who can see the tiger? Distinguishing object from background can sometimes be a real art. Photoelectric proximity sensors from SensoPart master this art with ultimate perfection. Thanks to their excellent background suppression they see precisely what matters: the object itself – and nothing else!

Reliable object detection
• Independent of the target object's size, shape, colour, material and surface properties
• Detection according to the principle of distance measurement: precise and reliable

High process stability
• Reliable suppression of unwanted reflections and ambient light
• Suppression of moving parts in the background (e.g. the transport belt, machine parts, persons)
• Reliable detection of target objects even at low distances to the background

The economical solution
• Applicable for all task areas
• Rapid commissioning via simple teach-in
• Long machine running times thanks to quality sensors from SensoPart, made in Germany

Tough

Our sensors are industry-oriented down to the last detail

ECOLAB

Ecolab is an established industry standard in the disinfection and detergent industry, providing a standardised test process.

Robust in any location
Thanks to their well thought-out designs and excellent workmanship, products from SensoPart are ideally equipped for harsh industrial conditions. Stable, tightly sealed housings and tough metal plugs make our sensors particularly reliable and long-lived. They withstand vibrations and daily cleaning with steam or water jets.

Well thought-out down to the last detail
The mounting holes of our sub-miniature sensors in the F 10 series are reinforced with metal eyelets. This prevents the housing from being damaged during installation through the use of screws that are too large or too great a torque.

An intelligent solution
The stainless steel sensors of the F 55 series are operated via a flush piezo-metal button which, in contrast to conventional moving operating buttons, is integrated in the sensor housing with a perfect seal – an intelligent solution for hygienically sensitive areas.

Industrial environments are not exactly gentle: dust and dirt, vibrations and tightly gripping hands belong to the harsh everyday experiences undergone by every sensor. All components, from the housing with its plug connections, through the mounting technology, to the optical and electronic assemblies must therefore be designed in such a way that damage is largely ruled out even under poor ambient conditions.

At SensoPart we place the highest value on the robustness and long service-lives of our products: the sensor housings are made of resistant materials (glass-fibre reinforced plastic, die-cast aluminium, or stainless steel) and tightly sealed (IP 67 or IP 69K) so that even cleaning with a jet of steam cannot harm them. Indestructible metal plugs do not give in even when faced with

strong tensile loading, and a special injection process protects the sensors' electronic inner life from impacts and vibrations. Special mounting brackets offer additional protection when things get really hard.

Reliable function under all conditions

The industrial appropriateness of a sensor is not only a result of mechanical strength but also sensoric robustness. Thanks to their excellent background suppression our proximity sensors, for example, are immune to interfering effects such as incidental sunlight or reflections from bright metal parts. Varying target object colours also have no effect on their reliable function. Our sensors do exactly what one expects of them even under adverse conditions.

The IP 69K enclosure rating permits high-pressure cleaning at high temperatures. A jet of steam or water at a pressure of 100 bar and a temperature of 80°C, hitting the sensor from any direction, must not cause damage.

Firmly anchored
SensoPart offers suitable mounting solutions for the most varied of installation situations. Our retaining and fixing brackets are extremely stable and unshakeably hold the sensor in its place. Special designs with additional sensor protection are also available.

The greater the accuracy, the better

Our sensors are the best in their class regarding precision and reliability
To the point. Precisely
*The sensors of the F 10 and F 25 series
are experts in small-part detection. Even
objects of only a few tenths of a milli-
metre are reliably detected. The precise
background suppression is adjustable
via potentiometer or teach-in, and en-
sures trouble-free operation.*

With a reliable view
*Sensors from SensoPart are the first
choice for all applications in which preci-
sion, reliability and reproducibility matter.
They detect objects of differing shapes,
colours and sizes – even against bright
backgrounds and with highly reflective
machine parts.*

The performance of average sensors is quite sufficient for many standard tasks in factory automation. But the wheat is separated from the chaff as soon as demands for accuracy and reliable function increase: in such cases one is well advised to choose a sensor from SensoPart. Because our sensors are always among the best in their class and thus offer, when it matters, the decisive advantage regarding performance or accuracy.

Process reliability. Background suppression from SensoPart

Above all our laser sensors: they reliably detect even tiny parts thanks to their precise, clearly contoured light spots. Sub-miniature photoelectric proximity sensors with background suppression in our F 10 series can thus easily detect a wire with a diameter of just 0.5 mm at a distance of 60 mm. And the quality of our sensors' background suppression is absolutely top class.

VISOR® – in a class of its own

Our vision sensors are also very popular among users: our new VISOR® series – with their rapid image processing, bright integrated LED illumination, and sophisticated evaluation algorithms – are absolutely first class. Whether for object detection in pick & place applications, the evaluation of 1D and 2D codes, or the detection of damaged edges on solar cells – in every specific application the sensors of the VISOR® platform show just how much technological expertise they contain.

Rapid but nevertheless accurate
High throughput rates are important in solar cell production. But this must not be achieved at the cost of accuracy. A case for the VISOR® Solar sensor from SensoPart!

Simply clever!

Our sensors make life easy for users

Simple mounting

The bracket, rotatable around two axes, considerably simplifies the alignment of vision sensors. Whereby it is extremely robust and does not become misaligned even with impacts and vibrations.

± 10°
Comfortable fine alignment

Sensors can be precisely aligned after mounting thanks to the integrated dovetail guide (left). Mounting on a bar bracket is similarly easy (right).
Uniform operation

SensoPart uses a uniform teach-in operating concept for all its photoelectric sensors and proximity sensors, simplifying the operation of new products for users. The Teach-in button can be locked after setup to prevent any unintentional readjustment. Logically arranged LEDs show the switching state.

Flexible cabling

The rotatable cable attachment or plug simplifies cabling, particularly when installation space is limited.

Interfaces as required

Our sensors have all the common interfaces and thus permit simple integration in higher-ranking control systems. Switching sensors are optionally available with the IO-Link interface, while vision sensors can be equipped with the fieldbus interfaces EtherNet/IP or PROFIBUS via an adapter.

Automation tasks can be very complex. But this by no means requires a complicated solution for users. At SensoPart we place great worth on developing technically convincing but nevertheless user-friendly solutions.

This already starts during installation: a large choice of well thought-out mounting elements permits installation in every conceivable location. Dovetail mounting, possible with many of our sensors, is particularly flexible, considerably simplifying retroactive fine alignment. We have also ensured that cabling is flexible – by means of rotatable cable and plug connections.

The setup of our sensors optionally takes place via potentiometer, teach-in, control line or – particularly user-friendly – via IO Link. The Auto-detect function for automatic PNP/NPN switchover of the switching output is also a clever idea.

VISOR® – image processing for everyman

The vision sensors of the VISOR® series are good examples of SensoPart's user-friendly philosophy: we have made quite complex image processing so easy that handling and operation are not much more complicated than that of switching sensors – so that machine operators also have no problem.
Setup in just a few steps
The user interface of the VISOR® configuration program offers a simple and comprehensible design.
One need not be an image-processing expert!

Sectors and applications

The best solution for you

Object detection
from Page 34

- Correct feed positions
- Inspection of completeness and presence
- Counting of parts
- Inspecting assembly processes
- Part detection and differentiation
Position/ orientation detection
from Page 38

- Highly precise front-edge detection, e.g. on transport belts
- Pick & place (2D position)
- Localisation of parts
- Assembly inspections
Measurement
from Page 40

- Measurement of components
- Distance measurement in the µm range
- Monitoring sag & dancer rolls
- Technologies: triangulation, time-of-flight, ultrasonic, 2D camera
Colour, contrast & luminescence
from Page 42

- Detection and differentiation of coloured parts
- Detection of colour marks
- Inspection of self-lighting components such as LEDs or displays
- Printed mark detection
There is nobody in sight, everything is moving as if by magic: transport belts rattle; robot arms whirl; workpieces are individualised, picked up and set down again, further transported on belts, put together to create assemblies. Sensors from SensoPart ensure that all these processes run smoothly and without human intervention – we offer the appropriate sensor type for every task in the process.

In the area of optoelectronics alone there is an enormous and comprehensive variety of sensors: whether through-beam photoelectric sensors, proximity sensors with background suppression, colour sensors, code readers, fibre-optic sensors, fork sensors, sub-miniature sensors, glass photoelectric sensors or ultraviolet sensors, with laser light or LED, in cuboid or metric housings – every housing and every technology has its specific strengths and areas of application.

Our switching sensors cover numerous standard industrial applications such as monitoring presence and completeness, distance and position determination, colour and mark detection, as well as customer-specific requirements in a great variety of sectors. Our vision sensors and systems detect complex objects or fluorescent colours, decipher data matrix codes, and detect crooked bottle tops or the broken edges of solar cells.

On the following pages we present a small selection of what our sensors can do for you. Contact us if your application is not included: we are certain that we will find the right solution for your process, too!

Identification

from Page 44

- *Product labelling*
- *Product identification*
- *Automated product tracking*
- *Product picking*
- *Quality assurance, determination of quality parameters*

Applications for the solar sector

from Page 45

- *Position and edge damage inspection*
- *Wafer dimensions*
- *Code reading on solar cells*
- *Checking projections on wafer boxes*

Transparent objects

from Page 46

- *Detection of transparent objects of all types: glass, foils, PET*
- *Detection of objects of all shapes: flat glass, bottles*
- *Presence of objects*
- *Precise front-edge detection*
From practical experience, for practical use.
As versatile and varied as our sensors are, they have this in common: they are all extremely reliable. Because during development of our products we not only aim for the maximum that is feasibly possible, but also for innovative and solid solutions that can cope with the demands of daily practice.

3

VISOR® Solar sensor for position and edge-break detection.

Small-part detection with the world's smallest laser scanner: FT 10.

Object detection

Checking presence, inspecting completeness, counting and sorting

Is the object present? How is it lying on the belt? Is a detail missing or is it wrongly mounted? These and other applications can be reliably automated with sensors from SensoPart. For object detection tasks we recommend, for example, the use of photoelectric sensors or proximity sensors of the **F 10**, **F 25** or **F 55** series, or one of the fibre-optic cable sensors from the **FL 70** series. And our vision sensors in the **VISOR®** series are a good choice for checking the completeness of complex objects.
Feeding of small parts in correct alignment
Page 62

On the basis of a pattern comparison, a **VISOR® object sensor** detects whether the parts have been supplied in the correct orientation.
- Highly precise determination of orientation (X-/Y-position and orientation)
- Comprehensible configuration software with user guidance and context help
- Viewer software with hierarchical user rights
- Image recorder for simulation of the application without a sensor
Inspecting completeness of a mobile phone keyboard
Page 62

A **VISOR® object sensor** inspects whether all the keys are present on a mobile phone and mounted in the correct positions.
- Powerful part finding and tracking (five detectors plus position tracking)
- Simultaneous inspection of several object features
- Comprehensive logic functions
- 6 configurable result outputs
- Comprehensible, multi-lingual configuration software with user guidance and context help

Checking filling levels and the correct sit of bottle tops
Page 106

In a single pass, the **Eyesight vision system** checks whether the bottles have been filled to the correct level and whether the caps are sitting straight
- Universally applicable stand-alone image processing system
- Rapid graphic parameterisation via drag & drop
- Comprehensive functions library with numerous image-processing tools
- Complex, iterative linkage of individual inspections
- Free definition of output data
- Easy and rapid commissioning

Detection of food before packaging
Page 292

With its tightly sealed stainless steel housing, the **FT 55-RHM laser scanner with background suppression** is suitable for applications in hygienically sensitive areas.
- Object detection almost completely colour-independent due to distance principle
- Reliable detection with differing backgrounds
- Bright light spot, also visible in daylight
- Robust, tightly sealed housing (IP 69K) with Ecolab approval
- Resistant towards chemicals and high temperatures
- Smooth housing surface for easy cleaning
Checking the presence of small parts on a vibrating feeder
Page 438

An **FL 70 fibre-optic sensor** registers the presence of workpieces at the end of the feed section.
- Extremely precise switching behaviour
- Simple teach-in with support from display
- Very good small-part detection through the use of focused fibre-optic cable
- Wide, individual range of fibre-optic cables for differing tasks
- Flexible fibre-optic cable arrangement
Object detection

Checking presence, inspecting completeness, counting and sorting
Counting parts on a vibrating feeder
Page 530

An **FGL fork sensor** monitors whether the feed section is completely occupied with workpieces and, if necessary, stops the transport belt.

- Small-part detection down to 0.2 mm
- High switching frequency for rapid conveyor processes
- Vibration-proof plastic housings
- Wide variety of mounting possibilities for economical, easy mounting
- Status LEDs with all-round visibility on fork ends
- Sensitivity adjustment via teach-in
Counting plug pins
Page 302

The precise **FR 55-RL laser retroreflective photoelectric sensor** detects pins even with very small diameters.

- Reliable small-part detection thanks to fine laser beam
- Laser Class 1, no risk for the human eye
- Sensitivity adjustment via teach-in or control line
- Dovetail designs and rotatable plug/cable connection for simple and flexible mounting
Detection of IC pins
Page 436

Even the smallest of objects, such as IC pins, can be reliably detected with the **FL 20 R fibre-optic sensor** as a result of its small light spot diameter.

- Amplifier easily integrated due to small housing
- Wide range of fibre-optic cables, covering numerous applications

Checking lids
Page 250

Lids lying the wrong way round are reliably detected with the
FT 25-RLH laser photoelectric proximity sensor thanks to
background suppression that works on the distance principle.
- Minimum height differences are detected
- Largely independent of object surfaces and colours
- Easy teach-in
- No impairment from highly reflective or moving backgrounds
- Most accurate small-part detection thanks to innovative laser
  technology (Laser Class 1)
- Versatile mounting possibilities
Diverting out uncoated parts
Page 260

Brightness differences can be reliably detected with the **FT 25-R
diffuse photoelectric proximity sensor**.
- Detection of even the slightest of grey differences
- Long operating distances possible
- Simple teach-in
Baggage distribution
Page 362

The **FR 50 R retroreflective photoelectric sensor** detects the
arrival of a piece of luggage at the end of the belt.
- Reliable detection of objects regardless of their surfaces
- Long ranges and operating distances possible
Detection of orientation/position

Front-edge detection, pick & place, quality inspections

In order to be able to pick up a workpiece or component from a belt with a targeted robot gripper one has to know the exact position in advance. Our photoelectric proximity sensors with background suppression in the **FT 10** and **FT 25** series are ideally suited for such tasks. If, in a pick & place application, the X-/Y-position and orientation are also required, or if complex assemblies must be inspected for correct and complete assembly, we recommend our vision sensors in the **VISOR®** series, which can detect several features in a single pass.
Precise circuit board front-edge detection
Page 228

The front edges of circuit boards are registered with the
FT 10-RLH sub-miniature sensor with background suppression.
- Flexible mounting thanks to adjustable background suppression
- Reliable detection even with reflective metallic parts in the background
- Very low space requirement (dimensions only 21 × 14 × 8 mm^3)
- Precise switching behaviour due to small laser light spot (Laser Class 1)
Object front-edge detection
Page 254

One **FT 25-RHD photoelectric proximity sensor** with background suppression detects the front edges of individualised chocolate bars.
- No impairment by highly reflective or moving backgrounds and transport belts
- High scanning distance with all common materials and surfaces
- Adjustable, precise background suppression (distance measurement principle)
- Simple scanning distance adjustment via teach-in
- Very easily visible light spot for simple alignment
- Wide range of different types and designs
- Also available as a laser version for highly precise detection tasks
Monitoring IC pins
Page 250

The fine light beam of the **FT 25-RLH laser sensor** permits precise detection of even small objects
- Reliable even with highly reflective metal parts
- High scanning rate possible with high switching frequency
- Independent of object colour and surface
- Backgrounds located very close to the object are reliably suppressed

Measurement

Measuring parts, monitoring sag, measuring thickness and distance

In many processes, similar values such as the distance or thickness of an object must be determined. In such applications, the laser distance sensors of the **FT 50 RLA** series (which operate using the triangulation principle), and the particularly far-sighted **FR 92** retroreflective photoelectric sensor (which measures distances of up to 250 m with an accuracy in the μm range by means of light time-of-flight technology), have proved useful. And our **Eyesight vision system**, with a function library of over 100 functions, is available for detailed inspections of dimensional accuracy.
Measurement of turned parts on a rotary table
Page 106

Turned parts can be inspected for dimensional accuracy with the **Eyesight vision system**.
- Compact smart camera with C-mount lens and dirt protection tube
- Appropriate illumination (surface light) for a reliable solution
- Intuitive graphic user interface
- Comprehensive functions library with numerous image-processing tools
- Images and results visualised for users via Ethernet
Monitoring the sag of carpets
Page 548

The **UT 20 ultrasonic sensor** checks the sag of textile floor coverings in order to ensure even winding.
- Highly accurate distance measurement
- Reliable operation on all surfaces: textiles, paper, foils (also transparent)
- Product range with analogue and switching outputs
- Very small housing for simple installation even when space is limited

Crane positioning with light time-of-flight distance sensors
Page 178

The **FR 92 distance sensor** measures the horizontal position of the jib on a gantry crane and thus improves collision prevention.
- Non-contact and robust light time-of-flight measurement instead of wear-prone mechanical distance determination
- Operating range of up to 250 m
- Various interfaces including SSI and RS 422
- High repeatability accuracy and high measurement rates
Dancer roll regulation and sag monitoring
Page 154

An **FT 50 RLA laser distance sensor** determines the position of the dancer roll and thus ensures even winding of the coil.
- Precise determination of dancer roll position for active traction force regulation of the web being wound
- Reliable detection regardless of the target object's surface properties
- Short response time for rapid processes
- Variety of measurement ranges for numerous tasks
- RS-485 interface and analogue output
Determining coil thickness on a packaging machine
Page 154

An **FT 50 RLA laser distance sensor** measures the distance to the coil surface in order to activate roll changes.
- Small housing for easy integration
- High accuracy regardless of target object's surface properties
- Short response time
- Programmable switching outputs
Colour, contrast and luminescence

Checking presence of coloured objects, printed mark detection, inspecting LEDs

Most sensors are colour-blind, but not all: with the **FT 25**, **FT 50 C** and **FT 50 UV** series, SensoPart offers special sensors for detecting colours, grey values and even invisible luminescent marks. Whereby either the colour or grey values of the target object or attached colour marks or labels can be evaluated. The **VISOR® Color**, which can even detect self-lighting objects such as LEDs, is particularly versatile.
Detection of coloured bottle tops in a filling plant
Page 194

An **FT 50 C white-light colour sensor** checks whether the bottle tops are correct on the basis of their colour.
- High colour selectivity, independent of scanning distance fluctuations
- Reliable colour detection with tops made of metal or plastic
- Very reliable, even with wobbling or vibrating bottles and objects
- Teach-in of individual colours or scanning-in of colour ranges
- Available with three different light-spot geometries
Inspecting LEDs in car production
Page 80

A **VISOR® Color** inspects the correct colour of LEDs installed in dashboards.
- Application-specific pre-configured vision sensor
- Detection of active (i.e. self-lighting) colours as well as "non-colours" (white, grey, black)
- High detection accuracy, even with very slight colour nuances
- Simple alignment with user-friendly configuration software
- Image recorder for offline simulation without sensor
Printed mark detection on endless packaging
Page 208

The cutting position is determined on the basis of printed marks detected using an **FT 25-RGB contrast scanner**.

- Resolution of 30 contrast levels
- Reflective foils are also reliably detected
- Unaffected by vibrations or flapping material
- High switching frequency for maximum positioning accuracy
- Comfortable teach-in operation, with feedback of signal/contrast quality
- Very small housing
- Automatic selection of the ideal transmission colour for the taught-in contrast
Checking the presence of package inserts
Page 216

An **FT 50 C-UV luminescence sensor** detects the package inserts in the medical package. Whereby it uses the luminescent properties of the paper for reliable detection.

- Extremely reliable detection at varying distances between sensor and target object using a patented sensor concept
- Also suitable for narrow packages thanks to small light spot
- Small, compact housing (dimensions just $50 \times 50 \times 17$ mm^3)
- Reliable suppression of luminescence in the background of the target object

Identification
Reading of bar codes and data matrix codes, OCR, tracking of components

The unbroken tracking of parts and products plays an increasingly important role in industrial processes. This is why parts are provided with one- or two-dimensional codes that are either attached using labels or directly placed on the part by means of dot peening or laser (direct marking). Our code readers in the VISOR® series read bar codes and data matrix codes of numerous types. Even extremely small printing or marked codes on difficult substrates (wrinkled, reflective, rough) can be reliably detected using a variety of optical and illumination variants.
Evaluation of printed and directly marked codes
Page 118

A **VISOR® Code Reader** checks both the dot-peened data matrix code on a die-cast part and the code printed on the corresponding packaging.
- For all conventional 2D data matrix codes and 1D bar codes
- Optimum cost-effectiveness due to the combination of code reading and object detection in a single device
- High operational reliability thanks to reliable detection of even poorly legible codes
- Flexible and simple integration in PC and PLC environments
- Very high flexibility, e.g. reading of several similar or differing codes types in a single read process
- Reading of optical characters with OCR
Dot-peened code on rough substrate
This is made readable by means of powerful algorithms. The dot-peened imprint in optical characters can be checked for presence using object detection.

Code with low contrast
This is made readable by the high tolerance to weakly contrasting codes.

Reading optical characters
Dotted fonts can also be read with OCR.
Code with small "quiet zone"
Even codes with a small quiet zone or damaged finder pattern can be read.
Code reading on solar cells
Even extremely small codes, such as those on silicon solar cells, or highly reflective codes, e.g. on thin-layer solar cells, can be read.

Printed codes on pharmaceutical packaging
It is possible to search for both ECC200 or bar codes (e.g. EAN 13) simultaneously. In addition to code reading, the presence of optical characters can be inspected using object detection.

Applications in the solar sector

Positioning, detecting edge breaks, front-edge detection and checking for projections, double layers detection

SensoPart has developed customised automation solutions for the photovoltaic industry. These include, for example, monitoring the positions and broken edges of solar wafers and cells in handling areas, as well as the unbroken tracking of crystalline and thin-layer solar cells via directly marked data matrix codes. In addition to switching sensors, application-specific solar sensors from the VISOR® series are used for these applications.
Monitoring the positions and broken edges of solar wafers
Page 98

VISOR® Solar sensors check the correct position of the wafer and detect any broken edges during various phases of solar cell production.
- Precise detection of position and orientation of wafers and cells
- Breakage detection regardless of type of wafer or cell
- Edges monitored with sub-pixel accuracy
- Simple integration in just a few steps
- No background suppression necessary
- Measurement of wafers
- Position and orientation of busbars
Checking presence of wafers
Page 228 / Page 154

An **FT 10-RLH** sub-miniature scanner with background suppression detects the lowest wafer in the cassette. At the same time, an **FT 50-RLA** analogue laser distance sensor checks slot occupation from above.
- Bright, precise light spot for accurate switching behaviour and easy alignment
- Sub-miniature housing for installation in the smallest of spaces (dimensions only 21 x 14 x 8 mm³)
- Reliable and precise height detection and determination with the **FT 50-RLA distance sensor**

Transparent objects

Checking presence of bottles, foils and small transparent parts

Transparent objects pose special challenges for sensors because their low absorption rates require very high switching sensitivity and accuracy. SensoPart offers special retroreflective photoelectric sensors **(FR 25-RGO)** as well as ultrasonic sensors (**UT 20**, **UT 20 Soundpipe**, **UMT 30** and cylindrical housings) for the reliable detection of such objects. This permits the reliable detection of transparent objects of any shape, and made of any material.
Checking the presence of bottles in a filling plant
Page 262

The **FR 25-RGO retroreflective photoelectric sensor** detects transparent bottles in a filling plant.
- Reliable detection of glass and transparent plastic using the autocollimation principle
- Reliable detection of any bottle diameters and objects, e.g. small ampoules in the pharmaceutical industry
- Trouble-free flat glass and foil detection
- Operating range of up to 2 m, reliable detection from range of 0 mm
- DELTA function: automatic adaptation of the sensor to changing ambient conditions

More applications:
Page 544

UT 20 Soundpipe ultrasonic sensors in cuboid housings and the **UMT 30 ultrasonic sensor** reliably detect transparent objects in various industrial sectors.
- Reliable detection of ampoules in the pharmaceutical industry
- Dependable monitoring of blister packages for tablets
- Reliable detection of transparent foils in the print industry
- Control of pallet packaging plants with transparent stretch foil

SensoPart covers the entire range of industrial image processing with its portfolio of vision solutions – from VISOR® plug & play solutions for standard applications to the freely configurable Eyesight vision system for particularly complex automation tasks.

Camera + Software = Vision!

A powerful smart camera in compact tightly sealed sensor housings with uniform dovetail mounting forms the basis of our VISOR® vision sensor and Eyesight vision systems. Among other features, it has integrated signal processing, LED illumination (white, red, infrared, UV), data interfaces and digital I/Os, integrated optics or C-mount, as well as user-friendly configuration software.

Most of the inspection tasks that are required in practice can be solved with one of our VISOR® vision sensors that are ready for use in just a few steps. With up to 50 evaluations per second, our VISOR® vision sensors are also the right choice for rapid processes.

And for particularly complex cases we offer the Eyesight, a flexible vision system with which you can also implement your most sophisticated automation requirements.

C-mount variants:
- *C-mount for many variants; can be combined with C-mount protective casings*
- *VISOR® V20 variants with megapixel resolution for high precision*

🟥🟨 made in Germany

Object detection and classification:
The VISOR® object sensor monitors the sorting of parts and regulates ejection.

Detection of coloured objects:
The VISOR® Color sensor detects not only colours and colour intensities, but also "non-colours", i.e. white, black and grey.
Positioning and inspecting solar cells:
The VISOR® Solar sensor detects the position and orientation of wafers and cells, as well as any damage.

Code reading:
The VISOR® Code Reader detects all common printed and directly marked data matrix and bar codes.

Ready, steady, go!

VISOR® vision sensors – complexities made easy

Unpack, adjust and off you go – vision sensors have never before been so powerful and so easily and intuitively operated. The VISOR® is ready for operation in only ten minutes with just a few mouse clicks. Thanks to VISOR® technology from SensoPart, there is now also a simple and effective solution for the most difficult automation tasks. Whether objects with complex shapes, colour detection, data matrix codes, self-illuminating display elements, or edge breakouts on solar cells, our application-specific vision sensors reliably detect all relevant object features.

It's all there.

Housing:
Integrated evaluation unit with powerful signal processor
Vibration-proof with an enclosure rating of IP 67

Mounting:
Simple and flexible mounting thanks to dovetail design

Illumination:
Integrated LED illumination (white, red, infrared, UV)

Interfaces:
Integrated communication interfaces (Ethernet, serial interfaces, digital I/O)

Figure 1:1

Lens:
Integrated lens or C-mount variants for long operating distances

C-mount variants for long operating distances

VISOR® object sensor

System description

The VISOR® object sensor from SensoPart not only impresses with its excellent performance data, but also with its sophisticated operating concept: even the definition of complex inspection tasks is achieved rapidly and without complication thanks to its comfortable and easily understood user interface – even without detailed image-processing knowledge. You define and test your inspection tasks (jobs) and desired evaluations (detectors) in a few intuitive setup steps.

The effect of every setting is immediately visible in the image. Comprehensive logic functions allow the direct assignment of more complex inspection results to one of six digital result outputs (or even to 32 switching outputs via the I/O expansion module available as an accessory). Time-based control of signal output is also possible via the integrated encoder function. The integrated image recorder, with which you can carry out fault analyses and simulations, is also very helpful.

Everything in view with the Viewer: after completing configuration, the vision sensor works in your production plant autonomously, i.e. without a PC connection. Of course, data can be called up at any time during running operation: our own Viewer software with heriarchical user rights (reliably preventing unintentional changes to the configuration) is available for this. Professional image processing can be so simple and comfortable!w

Step-by-step to your goal

1. Job: select an inspection task or create a new one.

2. Position tracking: define a position detector (optional).

3. Detectors: define the desired evaluations.

4. Output: assign the inspection results to the switching outputs.

5. Results: test your configuration.

6. Start the sensor: run your job on the sensor.

Overview of the user interface

A **Menu bar:** rapid access to the most important functions

B **Setup navigation:** dependable user guidance through the configuration process

C **Image window:** live picture of the object with graphic display of inspection area and results

D **Context help:** precise information on every work step

E **Trigger function:** triggered operation or free-running, single picture or serial switching

F **Online/offline operation:** operating with sensor connected or simulation with stored pictures

G **Configuration window:** input of parameters for every navigation step

H **Status line:** current information on active job and on state of outputs

VISOR® Color

System description

The vision colour sensors of the VISOR® Color series offer comprehensive functions for detecting coloured objects. Instead of the usual monochrome imaging chip they are equipped with a colour chip with a resolution of up to 1.3 megapixels (V20).

The comprehensive selection of detectors for object detection corresponds to the functional range of VISOR® object sensors. In addition to the detectors for sample comparison, contour, contrast, grey level, brightness and position tracking (selectable via sample comparison, contour or edge scanning), the VISOR® Color is also equipped with three detectors for colour detection. Three colour spaces (RGB, HSV, Lab) and several colour channels are available.

With the new colour detectors, the VISOR® Color is capable of differentiating between the finest of colour nuances. Any desired number of colours, colour gradients or colour patterns can be stored in the sensor memory and called up on demand. Moreover, objects with similar colours can be searched for.

Uniform operation for all VISOR® sensors

Setup of the VISOR® Color takes place via the proven intuitive user interface of the VISOR® series, with which even complex inspection tasks can be configured without detailed knowledge of image processing. Inspection tasks (jobs), position tracking (alignment) and the desired evaluations (detector) can be configured and tested in a few intuitively understandable setup steps. The effect of every setting is immediately visible in the image. Comprehensive logic functions allow the direct assignment of complex inspection results to one of six digital results outputs. With the help of the I/O expansion, available as an accessory, it is even possible to trigger up to 32 supplementary switching outputs.

Overview of the user interface

A **Colour channel:** selection of the colour space and the colour channels in which the detector is to operate.

B **Colour selection:** setting of the colour to be searched for.
A good/bad result is generated depending on the proportion of the area.

C **Thresholds:** setting of the threshold for the good/bad signal.

VISOR® Solar sensor

System description

The tailor-made solution for wafer handling.
The VISOR® Solar sensor can be configured for image processing with a few clicks and without previous knowledge. The user defines the inspection criteria and selects the relevant information, e.g. wafer position and orientation, wafer dimensions, breakout depth, position and orientation of the busbar, or wafer quality.

Plug & play: using the VISOR® Solar sensor is much easier than a classic image-processing solution. Because the functions relevant for wafer and cell inspections, e.g. the detection of wafer geometry and any defects, are already pre-configured so that the sensor is ready for operation after just a few mouse clicks. This is quick, doesn't cost much and functions wonderfully. Sunny times await you!

HIGHLIGHTS OF THE VISOR® SOLAR SENSOR

- Simple integration
- Precise position detection to ± 50 µm
- Finds breakouts from depth of 0.50 mm
- Detection of holes
- Conveyor systems can be cut out
- Short cycle times from 60 ms
- Reliable operation, even in daylight
- No backlight necessary
- Little space required: operating distance from 360 mm

B   **Breakout dimensions:** define good / bad criteria according to the size of the breakout.

C   **Breakout shape:** detection of differentiate shaped breakouts.

D   **Holes:** reject wafers with holes.

E   **Calibration:** the camera is calibrated with one click.

Eyesight vision system

System description

Most image-processing applications can be rapidly and easily solved with pre-configured VISOR® vision sensors. However, their range of functions is not always sufficient for particularly demanding or specific tasks – but here, too, SensoPart has the right solution: the freely programmable Eyesight vision system offers comprehensive configuration possibilities so that you can also implement very complex automation applications with the smart camera. Whereby complex is not synonymous with complicated: the graphic programming by means of drag & drop makes it easy for you to "construct" your own applications.

Scanning

	Scan points
	Circular scanner
	Edge counter (straight)
	Find edges (projected)
	Search ring for counting

Access to libraries

	Script Interpreter

* with colour version

Circle calculator:
Round objects or segments of circles can be measured with this tool for easy detection of deformations. An example of this would be checking for underfilling or overfilling during the plastic process.

Angle calculation:
Components can be tested for dimensional accuracy with the measurement tool. Angles on components, for example, can be determined and evaluated with the angle tool. The thread is also checked for completeness and the dimensions are checked with the help of the distance tool.

Distance calculation:
Any distances in the component can be measured and evaluated with the distance tool. In addition, radii, angles, and drilled holes can also be checked in an inspection programme.

Accessories for VISOR® vision sensors and the Eyesight vision system

System description

Good lighting is all-important for image-processing applications – because the best evaluation system cannot compensate for anything that has already been lost during image capture. This is why all our vision systems have powerful integrated illumination that is more than bright enough for most applications. Supplementary illumination may be helpful, however, in critical lighting situations, e.g. with strong ambient light incidence, or highly reflective or strongly contoured objects. SensoPart offers a comprehensive selection of surface, ring and diffuse lighting with which all applications can be properly illuminated.

Integrated lens or C-mount? In most cases you will also have no problem with the integrated lens of your vision sensor. If necessary for the application, however, with very long measurement distances for example, a C-mount version with a separate lens is available.

The SensoPart range also covers all eventualities with other accessories, from mounting brackets, through interface cables, to I/O expansion. Because we want to be sure that you are missing nothing!

4

A few basics regarding good illumination

With a bright field
Edges and background are difficult to differentiate.

With a dark field
Edges are clearly highlighted using dark field illumination.

White, red or infrared light?
White light can be used everywhere because it includes the whole spectrum of light, so it achieves good contrast with objects of differing surface properties and colours. Red or infrared light is recommended, on the other hand, for the targeted highlighting or suppression of coloured object features or for eliminating ambient light effects.

Surface or ring lighting?
Every structure has its specific virtues. Surface lighting, for example, is often used for backlit applications in which the target object is lit from behind – so that the external contours are strongly highlighted. Very symmetrical incidental illumination can be implemented with ring lighting, and diffuse illumination is recommended for, among other things, strongly reflective surfaces.

Light or dark field?
Targeted features can be amplified, and interfering effects suppressed, by using the right illumination. Light or reflective features are well differentiated when an object is illuminated from the direction of the sensor (light field); if the light is directed towards the sensor at a slight angle (dark field), the structures of the target object are more strongly differentiated.

VISOR® object sensor for part detection

Detects the right part in the wrong place and vice versa

made in Germany

HIGHLIGHTS OF VISOR® OBJECT SENSOR

- User-friendly configuration and viewer software with hierarchical user rights and online help

- Powerful part-finding and tracking

- Precise position determination: x/y-position and orientation

- Comprehensive logic functions for the digital switching outputs

- Flexible definition of output data (header, trailer, net data)

- Support of EtherNet/IP and DHCP

- Comprehensive possibilities for archiving pictures and data

Glue dot present?
Early detection by monitoring presence – in this case caps for the beverages packaging industry – long before quality assurance. Preventing expensive rejections.

Position and position tolerance measurement:
The sensor "learns" the contours and their direction from a picture, and reacts reliably to deviations. The sensor responds correctly even if a nut is the wrong way round.

Spout present or not?
Too much shrinking – or too little? The Vision object sensor's contour detector keeps an eye on all the relevant details during the production of blood bags.

Objects that sometimes appear in unexpected positions and have complex shapes and details – classic switching sensors would be completely overwhelmed by such detection tasks. Not the VISOR® object sensor from SensoPart: it always maintains its overview, detecting defective parts, parts in the wrong position, wrong orientation, wrong sequence or a combination of them all – in an instant. With its highly precise position and orientation detection, our VISOR® object sensor is one of the best in its class.

Five detectors plus position detection

A total of five detectors are available for inspection tasks and evaluations: pattern comparison, contour detection, brightness, grey threshold and contrast detection. The Advanced version of the VISOR® object sensor also offers position tracking, among other things: this permits reliable detection of those features that are not always present in precisely the taught-in position. All evaluations take place relative to the current part position and orientation, without them having to be defined for every possible position of an individual feature. This powerful tool allows you to solve even demanding applications confidently!

VISOR® V10 object sensor

Standard vision sensor for object detection, 12 mm

CE
IP 67
c(UL)us LISTED

PRODUCT HIGHLIGHTS

- User-friendly configuration and viewer software with hierarchical user rights
- Detectors for object detection
- Powerful part-finding
- Precise position determination: X/Y-position and orientation
- Comprehensive logic functions for digital switching outputs

Optical data	
Resolution	736 × 480 pixels
CMOS	1/3'', monochrome
Integrated lens, focal length	12 mm, adjustable focal position
Adjustment range	30 mm to infinity
Integrated illumination	White, red, infrared LEDs
Minimum field of view, X × Y	8 × 6 mm^2

Functions	
Number of jobs / detectors	2 / 32
Detectors	Contour, pattern comparison, contrast, brightness, grey level
Properties	Pattern comparison / contour: teach-in and detection of patterns and contours; grey threshold, brightness: evaluation of brightness; contrast: evaluation of contrast
Typical cycle times	Typ. 20 ms pattern comparison Typ. 30 ms contour Typ. 2 ms brightness Typ. 2 ms contrast Typ. 2 ms grey threshold

Electrical data	
Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Interfaces	Ethernet (LAN), EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 2 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm^3 (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[2]
Ambient temperature: storage	-20 … +60 °C[2]
Weight	Ca. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin
Vibration and impact resistance	EN 60947-5-2

[1] Max. ripple < 5 V$_{SS}$ [2] 80 % air humidity, non-condensing

VISOR® Color

Vision sensor for the most precise object detection

made in Germany
The same or not the same?
The VISOR® Color detects even the smallest of colour nuances more reliably than the human eye. This allows, for example, the detection of colour deviations or the sorting of parts by colour.

Incorrect occupancy ruled out:
The VISOR® Color combines colour and object detection in a single device and can therefore simultaneously inspect occupancy of the blister for completeness and for occupancy with the correct colour.

HIGHLIGHTS OF THE VISOR® COLOR

- Improved object detection through additional colour information
- Powerful colour detection, even with the smallest of colour nuances or self-illuminating components
- Powerful part finding and tracking
- Highly accurate evaluation via 1.3 megapixel colour chip
- Up to 6 digital switching outputs (another 32 with IO box)
- User-friendly configuration and viewer software with graded user rights and online help

All LEDs in the right place?
A unique performance feature of vision colour sensors is the detection of active (self-illuminating) colours. For example, displays in the automotive industry or electronic components can be inspected for correct placement with the VISOR® Color.

4

Colour is an important feature for detecting and differentiating between objects during the production process. Whether coloured marks in quality assurance, coloured printing or labels, LEDs or display elements, the occupancy of cable harnesses, or the browning level of baked goods – industry is much more colourful than is generally assumed.

Classic colour sensors are limited to the detection of passive colours, i. e. of object colours or coloured marks – they have to give up when confronted with self-illuminating objects. The VISOR® Color vision colour sensor from SensoPart knows no such restrictions – it not only "sees" objects of any shape and colour, but also provides additional information on colour intensity and the position of the particular object. It can also represent an alternative to conventional contrast sensors for

determining grey values and contrast differences when other object features are to be evaluated simultaneously.

The upgrade to colour is easy

The new generation of VISOR® Color vision colour sensors not only supports colour detection but also all the performance features of the VISOR® object sensor. The operating concept of the two vision sensors is identical – there are just three additional detectors for colour detection with corresponding configuration possibilities. The introductory effort for those switching from the VISOR® object sensor is thus minimal – when will you put more colours into your applications?

VISOR® V20 Color

Advanced vision sensor for object detection, colour, 12 mm

PRODUCT HIGHLIGHTS

- Object detection in colour with 1.3 mega pixel resolution
- Reliable detection of very slight colour nuances or self-illuminating components
- Powerful part finding and tracking
- User-friendly configuration and viewer software with hierarchical user rights
- Unlimited number of jobs and detectors
- Encoder input

Optical data	
Resolution	1280 × 1024 pixels
CMOS	1/1.8'', colour
Integrated lens, focal length	12 mm, adjustable focal position
Adjustment range	30 mm to infinity
Integrated illumination	White LEDs
Minimum field of view, X × Y	16 × 13 mm^2

Functions	
Number of jobs / detectors	max. 255 / max. 255
Detectors	Contour, pattern comparison, contrast, brightness, grey level, colour value, colour area, colour list
Properties	Position tracking: X/Y and orientation; pattern comparison / contour: teach-in and detection of patterns and contours; grey threshold, brightness: evaluation of brightness; contrast: evaluation of contrast; colour area: two-dimensional colour inspection with adustable tolerance; colour list: finding the most similar colours
Typical cycle times^2	Typ. 30 ms pattern comparison; typ. 60 ms contour; typ. 2 ms brightness; typ. 2 ms contrast; typ. 2 ms grey threshold; typ. 2 ms colour value; typ. 30 ms colour area; typ. 2 ms colour list

Electrical data	
Operating voltage, +U$_B$	18 … 26.4 V DC^1
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Approx. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Encoder input	High > 4 V
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm^3 (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50° C^3
Ambient temperature: storage	-20 … +60° C^3
Weight	Approx. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin Data M12, 5-pin
Vibration and impact resistance	EN 60947-5-2

^{1} Max. ripple < 5 V$_{SS}$ ^{2} with VGA-resolution (640 × 480 pixels) ^{3} 80 % air humidity, non-condensing

VISOR® V20 Color

Advanced vision sensor for object detection, colour, C-mount

PRODUCT HIGHLIGHTS

- Object detection in colour with 1.3 megapixel resolution
- Reliable detection of very slight colour nuances or self-illuminating components
- Powerful part finding and tracking
- User-friendly configuration and viewer software with hierarchical user rights
- Unlimited number of jobs and detectors
- Encoder input

Optical data

Resolution	1280 × 1024 pixels
CMOS	1/1.8", colour
Integrated lens, focal length	C-Mount
Adjustment range	Dependent on lens
Integrated illumination	None
Minimum field of view, X × Y	Dependent on lens

Functions

Number of jobs / detectors	max. 255 / max. 255
Detectors	Contour, pattern comparison, contrast, brightness, grey level, colour value, colour area, colour list
Properties	Position tracking: X/Y and orientation; pattern comparison / contour: teach-in and detection of patterns and contours; grey threshold, brightness: evaluation of brightness; contrast: evaluation of contrast; colour area: two-dimensional colour inspection with adustable tolerance; colour list: finding the most similar colours
Typical cycle times[2]	Typ. 30 ms pattern comparison; typ. 60 ms contour; typ. 2 ms brightness; typ. 2 ms contrast; typ. 2 ms grey threshold; typ. 2 ms colour value; typ. 30 ms colour area; typ. 2 ms colour list

Electrical data

|	
Operating voltage, +U_B	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection of all outputs
Power On Delay	Approx. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U_B-1 V, Low < 3 V
Input resistance	> 20 kOhm
Encoder input	High > 4 V
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data

Dimensions	65 × 45 × 45 mm³ (without plug)
Enclosure rating	IP 65[3]
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[4]
Ambient temperature: storage	-20 … +60 °C[4]
Weight	Approx. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin Data M12, 5-pin
Vibration and impact resistance	EN 60947-5-2

[1] Max. ripple < 5 V_{SS} [2] With VGA-resolution (640 × 480 Pixel)   [3] With LPT45 C-mount protective casing   [4] 80 % air humidity, non-condensing

VISOR® V10 Color

Standard vision sensor for object detection, colour, 6 mm

PRODUCT HIGHLIGHTS

- Object detection in colour
- Reliable detection of very slight colour nuances or self-illuminating components
- Powerful part finding and tracking
- User-friendly configuration and viewer software with hierarchical user rights

Optical data	
Resolution	736 × 480 pixels
CMOS	1/3'', colour
Integrated lens, focal length	6 mm, adjustable focal position
Adjustment range	6 mm to infinity
Integrated illumination	White LEDs
Minimum field of view, X × Y	5 × 4 mm^2

Functions	
Number of jobs / detectors	8 / 32
Detectors	Position tracking X/Y and orientation via contour inspection; colour area
Properties	Position tracking X/Y and orientation; contour: teach-in and detection of contours; colour area: two-dimensional colour inspection with adustable tolerance
Typical cycle times	Typ. 60 ms position tracking Typ. 30 ms colour area

Electrical data	
Operating voltage, +U_B	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection of all outputs
Power On Delay	Approx. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U_B-1 V, Low < 3 V
Input resistance	> 20 kOhm
Interfaces	Ethernet (LAN), EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 2 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm^3 (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[2]
Ambient temperature: storage	-20 … +60 °C[2]
Weight	Approx. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin

VISOR® Solar sensor for inspecting solar cells

Focusing on what matters

made in Germany

The VISOR® Solar sensor operates accurately and reliably even in fast-cycle processes.
The VISOR® Solar sensor measures every wafer or cell and thus detects even minimal edge breakouts.

HIGHLIGHTS OF VISOR® SOLAR SENSOR

- Simple integration
- Precise position detection down to ± 50 µm
- Edge defects can be detected up to a depth of 0.50 mm
- Detection of holes
- Transport belts can be masked via software
- Short cycle time from 60 ms
- Reliable operation, even in daylight
- No backlight necessary
- Low space requirement: operating distance from 360 mm

SensoPart has expanded its range of vision sensors with the VISOR® Solar in order to combat rising cost pressure in the production of solar cells. The compact sensor detects the position and any damage to wafers and cells. It allows robots to pick up and lay down wafers accurately. Wafers and solar cells with fine breakouts can be directly rejected during this step, before they can completely break up and damage other material.

These sensors can also be integrated in existing lines – as easily as a light barrier. Before a cell is printed, the sensor checks it for damage that could lead to breakage during the print process, preventing costly machine breakdowns.

4

VISOR® Solar sensor – Product Overview					
	Firmware Option	Resolution	Focal length	Integrated illumination	Page
V10-SO-S1-xxx	Standard	736 × 480 pixels	6 mm	White LEDs	100
V10-SO-A1-xxx	Advanced	736 × 480 pixels	6 mm	White or infrared LEDs	102
V10-SO-A1-xxx	Advanced	736 × 480 pixels	12 mm	White or infrared LEDs	104

VISOR® V10 Solar sensor

Standard vision sensor for wafer and cell inpection, 6 mm

CE

IP 67

c (UL) us
LISTED

PRODUCT HIGHLIGHTS

- Automatic detection of wafer and cell geometry
- Suitable for frontlit and backlit applications
- Simple sensor optimisation regarding evaluation speed and test precision (sub-pixel process)
- Detection of holes/cracks and breakouts
- Distortion correction

Optical data	
Resolution	736 × 480 pixels
CMOS	1/3'', monochrome
Integrated lens, focal length	6 mm, adjustable focal position
Adjustment range	6 mm to infinity
Integrated illumination	White LEDs
Minimum field of view, X × Y	5 × 4 mm^2

Functions	
Number of jobs / detectors	2 / 32
Detectors	Wafers, contrast, brightness, grey level
Properties	Wafers: localisation and examination of wafers Grey threshold, brightness: evaluation of brightness Contrast: evaluation of contrast
Typical cycle times	Typ. 100 ms wafer Typ. 2 ms brightness Typ. 2 ms contrast Typ. 2 ms grey threshold

Electrical data	
Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Interfaces	Ethernet (LAN), EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 2 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm^3 (without plug)
Enclosure rating	IP 67

VISOR® V10 Solar sensor

Advanced vision sensor for wafer and cell inspection, 6 mm

CE

IP 67

c UL us LISTED

PRODUCT HIGHLIGHTS

- Automatic detection of wafer and cell geometry
- Suitable for frontlit and backlit applications
- Simple sensor optimisation regarding evaluation speed and test precision (sub-pixel process)
- Detection of holes/cracks and breakouts
- Distortion correction
- Examination and position detection of busbars

Optical data	
Resolution	736 × 480 pixels
CMOS	1/3", monochrome
Integrated lens, focal length	6 mm, adjustable focal position
Adjustment range	6 mm to infinity
Integrated illumination	White, infrared LEDs
Minimum field of view, X × Y	5 × 4 mm^2

Functions	
Number of jobs / detectors	n / n
Detectors	Wafers, busbars, pattern comparison, contrast, brightness, grey level
Properties	Position tracking Wafers incl. busbars: localisation of wafers or busbars and examination of wafers Pattern comparison: teach-in and detection of patterns Grey threshold, brightness: evaluation of brightness Contrast: evaluation of contrast
Typical cycle times	Typ. 100 ms wafers Typ. 20 ms pattern comparison Typ. 2 ms brightness Typ. 2 ms contrast Typ. 2 ms grey threshold

Electrical data	
Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Encoder input	High > 4 V

Eyesight vision system – everything is possible

At last. You can do what you want!

made in Germany

Taking measures:
The dimensional accuracy of an object (e.g. a turned or pressed part) is an important quality feature, and can indirectly provide information on its consistency, stresses or wear, preventing rejects in downstream processes.

Providing direction:
The correct alignment of an object is an important prerequisite for downstream processes, e.g. for positioning and tracking a gripper. Colours, shapes and contours are suitable for monitoring correct orientation

Preventing faults:
Very different features can be checked at a glance with the Eyesight – here, for example, the position and colour of the cap, filling level and presence of the use-by date. This pays, because each unnoticed fault may be expensive later.

EYESIGHT HIGHLIGHTS

- Complete image-processing package with robust and flexible smart camera
- Programming via drag & drop of function blocks
- Complex iterative linkage of individual inspections
- Image and result visualisation in inspection mode
- Interpreter for programming one's own functions
- Image processing simulated on PC without camera
- Freely programmable data protocol for Ethernet and serial interface

Most image-processing applications can be rapidly and easily solved with pre-configured VISOR® vision sensors. However, their range of functions is not always sufficient for particularly demanding or specific tasks – but here, too, SensoPart has the right solution: the freely programmable Eyesight vision system offers comprehensive configuration possibilities so that you can also implement very complex automation applications with the smart camera. Whereby complex is not synonymous with complicated: graphic programming by means of drag & drop makes it easy for you to "construct" your own applications.

Eyesight has numerous of routines for object measurement, position determination and tracking, data communication, warpage point determination, contour inspection/tracking, colour selection/monitoring, brightness correction as well as a variety of filter functions. What can otherwise only be achieved by fully-fledged image-processing systems, you can implement with Eyesight with considerably less effort – and at a relatively reasonable price.

Eyesight Vision Systems – Product Overview					
	Firmware Option	Resolution	Focal length	Integrated illumination	Page
V20-EYE-A2-xxx	Monochrome, colour	1280 x 1024 pixels	12	White, red or infrared LEDs	108
V20-EYE-A2-xxx	Monochrome, colour	1280 x 1024 pixels	C-Mount	None	110
V10-EYE-A1-xxx	Monochrome, colour	736 x 480 pixels	6	White, red or infrared LEDs	112
V10-EYE-A1-xxx	Monochrome, colour	736 x 480 pixels	12	White, red or infrared LEDs	114
V10-EYE-A1-xxx	Monochrome, colour	736 x 480 pixels	C-Mount	None	116

V20 Eyesight

Vision system for complex image-processing applications, 12 mm

PRODUCT HIGHLIGHTS

- Complete image-processing package with robust and flexible hardware, 1.3 mega pixel
- Programming via drag & drop of function blocks
- Complex, iterative linkage of individual inspections
- Image processing can be simulated on the PC without camera
- Image and result visualisation in inspection mode
- Script interpreter for advanced user functions

Optical data

Resolution	1280 × 1024 pixels
CMOS	1/1.8", monochrome or colour
Integrated lens, focal length	12 mm, adjustable focal position
Adjustment range	30 mm to infinity
Integrated illumination	White, red, infrared LEDs
Minimum field of view, X × Y	16 × 13 mm^2

Functions

Number of inspection programs	No limitation (max. ca. 40 MB)
Functions	All function blocks for object measurement, position determination/ tracking, sequence control, data and image transfer, contour inspection, sub-programs, script interpreter.
Properties	See overview of commands
Typical cycle times	Dependent on inspection program

Electrical data

Operating voltage, $+U_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP High > U_B-1 V, Low < 3 V
Input resistance	> 20 kΩ
Interfaces	Ethernet (LAN), RS422, RS232
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data

Dimensions	65 × 45 × 45 mm^3 (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[2]
Ambient temperature: storage	-20 … +60 °C[2]
Weight	Ca. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin Data M12, 5-pin
Vibration and impact resistance	EN 60947-5-2

V10 Eyesight

Vision system for complex image-processing applications, C-mount

PRODUCT HIGHLIGHTS

- Complete image-processing package with robust and flexible hardware
- Programming via drag & drop of function blocks
- Complex, iterative linkage of individual inspections
- Image processing can be simulated on the PC without camera
- Image and result visualisation in inspection mode
- Script interpreter for advanced user functions

Optical data	
Resolution	736 × 480 pixels
CMOS	1/3", monochrome or colour
Integrated lens, focal length	C-mount
Adjustment range	Dependent on lens
Integrated illumination	None
Minimum field of view, X × Y	Dependent on lens

Functions	
Number of inspection programs	No limitation (max. ca. 40 MB)
Functions	All function blocks for object measurement, position determination/ tracking, sequence control, data and image transfer, contour inspection, sub-programs, script interpreter.
Properties	See overview of commands
Typical cycle times	Dependent on inspection program

Electrical data	
Operating voltage, $+U_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP High > U_B-1 V, Low < 3 V
Input resistance	> 20 kΩ
Interfaces	Ethernet (LAN), RS422, RS232
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm³ (without plug)
Enclosure rating	IP 65[2]
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[3]
Ambient temperature: storage	-20 … +60 °C[3]
Weight	Ca. 160 g
Plug connections	Supply and I/O M12, 12-pin Ethernet M12, 4-pin Data M12, 5-pin
Vibration and impact resistance	EN 60947-5-2

[1] Max. ripple < 5 V_{ss} [2] With LPT45 C-mount protective casing   [3] 80 % air humidity, non-condensing

VISOR® Code Reader

In a class of its own.

VISOR® Code Reader

V20-CR-P2-R12
- *Professional version for detecting 1D/2D codes, objects and for optical character reading with OCR*
- *Megapixel resolution*
- *Rapidly detects as many jobs and detectors as desired*
- *Has position tracking*
- *Reads several different types of codes in one reading pass*

>> *Page 126*

V10-CR-S1-R12
- *Standard version for detecting 1D/2D codes*
- *Maximum of 8 inspection tasks with one evaluation each (maximum of 5 identical types of code per reading)*

>> *Page 132*

The VISOR® Code Reader from SensoPart easily reads bar codes of numerous types as well as printed and directly marked data matrix codes according to the ECC200 standard, regardless of the carrier materials (metal, plastic, paper, glass). The sensor even easily deciphers skewed or distorted codes, or those attached to convex, reflective or transparent surfaces.

Built-in early warning system: the VISOR® Code Reader evaluates the quality of your printed and directly marked data matrix codes on the basis of standardised quality parameters according to ISO and AIM standards.

HIGHLIGHTS OF VISOR® CODE READER

- Reliably reads bar codes as well as printed and directly marked data matrix codes, and even several codes simultaneously and mixed 1D/2D codes

- Supplementary object detection for features other than codes

- Evaluation of quality parameters according to ISO/IEC 15415 and AIM DPM 2006

- Flexible definition of output data (header, trailer, net data)

- String comparision with message via the digital switching output

- Support of EtherNet/IP and DHCP

- Comprehensive possibilities for archiving pictures and data

- Reading of optical characters with OCR

Applications

- Product labelling and identification
- Automated product tracking
- Product picking, quality assurance

Sectors

- Automotive and supplier industries
- Food and beverages industries
- Pharmaceutical and cosmetics industries
- Packaging industry and logistics
- Laboratory automation
- Solar industry

5

🇩🇪 made in Germany

Printed bar codes

Laser-printed codes on plastic

Codes on glass

A lot of information in a small space: up to 2,334 ASCII symbols (7 bit) or 3,116 digits can be coded with an ECC-200 data matrix code.

VISOR® Code Reader – Product Overview

The VISOR® Code Reader reads whatever's printed, dot peened and lasered.

System description

With its integrated object detection, the VISOR® Code Reader is unique in its price segment. The compact sensor reads conventional 1D bar codes, 2D data matrix codes and now also optical characters (OCR). It also has four detectors for object detection (pattern comparison, brightness, grey level and contrast), with which other object features – for example, stamps or logos – can be evaluated in a single reading pass. Codes and object features are even reliably detected with deviations from the taught-in position – using position tracking (optionally activated).

A special image filter with expanded setting options guarantees excellent reading performance even under difficult reading conditions. The test results can largely be evaluated within the sensor itself – with the option of string comparison or regular printouts – so that there is no need for a PLC or PC connection in many cases. If, however, this proves necessary, it can be easily and flexibly connected using freely available PLC function blocks for Siemens S7, Codesys and Allen Bradley.

With integrated quality parameters complying with ISO and AIM standards, the VISOR® Code Reader also permits the informative evaluation of printed and directly marked 1D and 2D codes. Integrated red, infrared or white light variants provide maximum functional reliability through optimum code illumination.

In addition, the robust, compact and industry-oriented housings guarantee reliability even where space is restricted. Integrated 6 mm or 12 mm optics or C-mount devices also save effort and costs through their optimum adaptation to the most varied of code sizes and operating distances. The new V20 variants also offer a resolution of 1.3 megapixels for particularly small codes or large search areas.

Dot peened code on rough substrate
Code is made legible by powerful reading algorithm. Presence of the nailed imprint in plain text can be checked using object detection.

Low-contrast code
Code is made legible through high tolerance – also towards weakly contrasting codes.

Optical character reading
Dot matrix printing can also be read with OCR
Code with small "quiet zone"
Even codes with a small quiet zone or damaged finder pattern can be read.

Code reading on solar cells
Even extremely small codes (e.g. on silicon solar cells) or highly reflective codes (e.g. on thin-layer solar cells) can be read.

Printed codes on pharmaceutical packaging
ECC200 or bar codes (e.g. EAN 13) can be searched for simultaneously. In addition to code reading, the presence of optical characters can also be checked using object detection.

Special features of the VISOR® Code Reader

- Can be used for all common 2D codes (e.g. ECC 200 data matrix) and common 1D bar codes

- Optimum cost-effectiveness through combination of two functions in one device: code reading and object detection

- High operating dependability through reliable detection of even poorly readable codes under difficult ambient conditions

- Flexible and simple connection to PC and PLC environments due to comprehensive possibilities for archiving pictures and read results, as well as freely available PLC function blocks for Siemens S7, Codesys and Allen Bradley

- Very high flexibility, e.g. also due to reading several similar or different codes in one reading pass

- Reading of optical characters with OCR based on neuronal networks, particularly suitable for point printing

VISOR® V20 Code Reader

Advanced vision sensor for code reading with object detection, 12 mm

PRODUCT HIGHLIGHTS

- Can be used for all common 2D codes (ECC 200 data matrix) and common 1D bar codes
- Combination of two functions in one device: code reading and object detection
- Reliable detection of even poorly readable codes under difficult ambient conditions
- Comprehensive tools for flexible and easy connection to PC and PLC environments
- Reading of several similar or differing types of codes in one reading pass

Optical data

Resolution	1280 × 1024 pixels
CMOS	1/1.8'', monochrome
Integrated lens, focal length	12 mm, adjustable focal position
Adjustment range	30 mm to infinity
Integrated illumination	White, red, infrared, UV LEDs
Minimum field of view, X × Y	16 × 13 mm²

Functions

Number of jobs / detectors	max. 255 / max. 255
Detectors	Pattern comparison, contrast, brightness, grey level, bar code, data code
Properties	X/Y position tracking; pattern comparison: teach-in and pattern detection; grey level, brightness: evaluation of brightness; contrast: evaluation of contrast; bar code: reading of 1D bar codes, EAN, UPC, RSS, 2/5 Interleaved, 2/5 Industrial, Code 39, Code 93, Code 128, GS1, Pharmacode, Codabar; data code: reading of 2D codes: ECC200, QR code, PDF 417
Typical cycle time²	Typ. 20 ms pattern comparison; typ. 2 ms brightness; typ. 2 ms contrast; typ. 2 ms grey level; typ. 30 ms bar code; typ. 40 ms data code

Electrical data

Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kΩ
Encoder input	High > 4 V
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data

Dimensions	65 × 45 × 45 mm³ (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 ... +50 °C[3]
Ambient temperature: storage	-20 ... +60 °C[3]
Weight	Ca. 160 g
Plug connection	Power and I/O M12 12-pin, Ethernet M12 4-pin, Data M12 5-pin
Vibration and impact resistance	EN 60947-5-2

[1] Max. ripple < 5 V$_{ss}$ [2] with VGA-resolution (640 × 480 pixels)   [3] 80 % air humidity, non-condensing

Typical cycle time	Typ. 30 ms bar code Typ. 40 ms data code

Electrical data	
Operating voltage, $+U_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U_B-1V, Low < 3V
Input resistance	> 20 kOhm
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 2 selectable inputs/outputs

Mechanical data	
Dimensions	65 × 45 × 45 mm³ (without plug)
Enclosure rating	IP 67
Material, housing	Aluminium, plastic
Material, front screen	Plastic
Ambient temperature: operation	0 … +50 °C[2]
Ambient temperature: storage	-20 … +60 °C[2]
Weight	Ca. 160 g
Plug connection	Power and I/O M12, 12pin Ethernet M12, 4pin Data M12, 5-pin
Vibration and impact resistance	EN 60947-5-2

[1] Max. ripple < 5 V_{SS} [2] 80 % air humidity, non-condensing

VISOR® V10 Code Reader

Standard vision sensor for code reading, 12 mm

CE

IP 67

c(UL)us LISTED

PRODUCT HIGHLIGHTS

- Can be used for all common 2D codes (ECC 200 data matrix) and common 1D bar codes
- Reliable detection of even poorly readable codes under difficult ambient conditions
- Comprehensive tools for flexible and easy connection to PC and PLC environments

Optical data

Resolution	736 × 480 pixels
CMOS	1/3'', monochrome
Integrated lens, focal length	12 mm, adjustable focal position
Adjustment range	30 mm to infinity
Integrated illumination	White, red, infrared LEDs
Minimum field of view, X × Y	8 × 6 mm^2

Functions

Number of jobs / detectors	8 / 1
Detectors	Bar code / data code
Properties	Bar code: reading of 1D bar codes, EAN, UPC, RSS, 2/5 Interleaved, 2/5 Industrial, Code 39, Code 93, Code 128, GS1, Pharmacode, Codabar; data code: reading of 2D codes, ECC200, QR code, PDF 417
Typical cycle time	Typ. 30 ms bar code Typ. 40 ms data code

Electrical data

Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 2 selectable inputs/outputs

Mechanical data

Dimensions	65 × 45 × 45 mm^3 (without plug)

VISOR® V10 Code Reader

Advanced vision sensor for code reading with object detection, 6 mm

CE
IP 67
c(UL)us LISTED

PRODUCT HIGHLIGHTS

- Can be used for all common 2D codes (ECC 200 data matrix) and common 1D bar codes
- Combination of two functions in one device: code reading and object detection
- Reliable detection of even poorly readable codes under difficult ambient conditions
- Comprehensive tools for flexible and easy connection to PC and PLC environments
- Reading of several similar or differing types of codes in one reading pass

Optical data

Resolution	736 × 480 pixels
CMOS	1/3'', monochrome
Integrated lens, focal length	6 mm, adjustable focal position
Adjustment range	6 mm to infinity
Integrated illumination	White, red, infrared LEDs
Minimum field of view, X × Y	5 × 4 mm^2

Functions

Number of jobs / detectors	max. 255 / max. 255
Detectors	Pattern comparison, contrast, brightness, grey level, bar code, data code
Properties	X/Y position tracking; pattern comparison: teach-in and pattern detection; grey level, brightness: evaluation of brightness; contrast: evaluation of contrasts; bar code: reading of 1D bar codes, EAN, UPC, RSS, 2/5 Interleaved, 2/5 Industrial, Code 39, Code 93, Code 128, GS1, Pharmacode, Codabar; data code: reading of 2D codes, ECC200, QR code, PDF 417
Typical cycle time	Typ. 20 ms pattern comparison; typ. 2 ms brightness; typ. 2 ms contrast; typ. 2 ms grey level; typ. 30 ms bar code; typ. 40 ms data code

Electrical data

Operating voltage, +U$_B$	18 … 26.4 V DC[1]
Current consumption (without illumination and I/O)	≤ 120 mA
Current consumption (without I/O)	≤ 200 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection of all outputs
Power On Delay	Ca. 13 s after Power on
Outputs	PNP / NPN (switchable)
Max. output current (per output)	50 mA, 100 mA (pin 12)
Inputs	PNP/NPN High > U$_B$-1 V, Low < 3 V
Input resistance	> 20 kOhm
Encoder input	High > 4 V
Interfaces	Ethernet (LAN), RS422, RS232, EtherNet/IP
Inputs/outputs	2 inputs, 4 outputs, 4 selectable inputs/outputs

Mechanical data

FT 25
- *Operating range (scanning distance) from 20 mm to 200 mm*
- *LED short-range distance sensors using the triangulation principle*
- *Miniature housing for simple integration*
- *Analogue output 0 … 10 V*

from Page 152

FT 50
- *Operating range (scanning distance) from 30 to 300 mm*
- *High absolute accuracy*
- *High measurement frequency*
- *Laser distance sensors using the triangulation principle*
- *High precision thanks to resolution of up to 7 µm*
- *RS485 and analogue interfaces*

from Page 152

FT 80
- *Operating range (scanning distance) from 250 mm to 750 mm*
- *High repeatability*
- *Laser distance sensors using the triangulation principle*
- *RS485 and analogue interfaces*

from Page 164

F 55 / F 90 / F 91 / F 92
- *Laser distance sensors using the time-of-flight principle*
- *Scanner versions up to measurement distance of 10 m*
- *Reflector versions up to 250 m range*
- *Wide choice of interfaces (serial and analogue)*

Rapid and precise measurement, accurate positioning, and detection of the most varied of materials – distance measurement is a central requirement in many areas of automation technology. Whether for checking the winding of coils with millimetre accuracy, the detection of double sheets, or the accurate positioning of storage and retrieval machines – distance sensors from SensoPart are reliable tools for many purposes in the following sectors:

- The automotive and supplier industries
- Mechanical engineering and special machine construction
- Assembly and handling
- The packaging industry
- Handling and warehousing systems
- The steel industry
- The textile and paper industries
- The wood industry

The technologies used are as varied as the applications.
Our optical sensors use the triangulation process for operating ranges below 1 m, and time-of-flight measurement for longer operating distances. Apart from optical sensors, ultrasonic sensors are also used for transparent or strongly reflective materials, in particular, and inductive sensors are employed for metal objects at close-range and in harsh operating conditions.

Monorail system with car bodies in the automotive industry

Car production
Positioning the body using distance sensors

- *2D camera technology for measuring e.g. moulded and turned parts*
- *Versatile measurement tool for all dimensional accuracy tasks*
- *Image and result visualisation in inspection mode*

6

Distance sensors

System description

Distance measurement using triangulation

The measurement principle of optical triangulation is suitable for the precise determination of distances at close range. With the help of special receiver optics and a position-sensitive detector (e.g. a photodiode line), the sensor can determine the object distance regardless of its reflectivity (see illustration below). The colour and surface properties (e.g. highly reflective) thus have practically no effect on measurement accuracy.

The FT 50 RLA laser distance sensor provides a signal proportional to the distance, transmitted via the analogue output (e.g. 4 ... 20 mA) or a serial RS485 interface. The switching range of the digital outputs can be set to any zone within the operating range using teach-in.

Dancer roll control using the FT 50 RLA-220 laser distance sensor

The triangulation process: with the help of a line-shaped position-sensitive detector, the distance sensor measures the distance to the object regardless of the amount of light reflected.

The light reflected back from the object (P_1) hits the line at point P_1. The sensor determines the distance signal from this. The light correspondingly hits the detector at a different point (P_2) at object distance P_2.

Collision prevention sensors for monorails

Collision prevention on monorail systems in car production is a special distance measurement task. The FR 85 series was specially developed for this application. These sensors provide excellent measurement results regardless of the reflectivity of the target object, and their comprehensive range of functions is impressive.

The FR 85 offers high measurement accuracy and immunity to ambient light because it is based on time-of-flight technology. A long measurement range (up to 6 m) and flexibly adjustable protection field geometries allow adaptation to the situation on site, even when cornering.

Distance measurement using time-of-flight

SensoPart uses time-of-flight technology to measure longer distances (up to 250 m). The sensor emits pulsed laser light that is reflected by the target object. The distance to the object is determined by the time taken between emission and reception of the light.

The use of pulsed light provides reliable background suppression and very high immunity to ambient light. The distance sensors of the F 90 series, using time-of-flight technology, measure distances of up to 250 m with a high level of accuracy. The sensors are particularly suitable for use on production lines and in handling and warehousing systems due to their reliable detection and long ranges or scanning distances.
Crane positioning with FR 92 distance sensor

Inductive analogue sensors

The reasonably priced solution for metallic objects. Compared to optical or ultrasonic sensors, inductive distance sensors have only limited ranges. They are still used under harsh conditions, in particular, as a result of their great robustness.

- Inductive distance sensors with analogue output of 4 … 20 mA
- Operating range of 0 … 6 mm to 4.5 … 12 mm
- Falling characteristic line on approach
- Robust metal housings

Ultrasonic sensors

Ultrasonic sensors are the right choice for materials with which optical systems cannot be reliably operated. Ultrasonic sensors work using the time-of-flight of sound. The sensor emits ultrasonic pulses. The target object reflects the sound. The sensor measures the time-of-flight of the pulse and calculates the distance value. This value is transmitted to the controller as a current or voltage signal.

- Operating ranges from 20 … 6000 mm
- Operating range and analogue output adjustable via teach-in
- Analogue output 0 … 10 V / 4 … 20 mA
Monitoring throughput with the UT 20 ultrasonic sensor

FT 25-RA – optical short-range distance sensors

The compact class for measurement and regulatory tasks

■■ made in Germany

FT 25-RA for dancer roll regulation
The precise control of the FT 25-RA ensures a constant tension of the paper roll during unwinding.

TYPICAL FT 25-RA

- Operating range: 20 ... 80 mm / 30 ... 200 mm

- Distance sensor with 1 … 10 V analogue output

- Easily integratable ultra-compact ABS housing: 34 x 12 x 20 mm^3

- High precision and high repeatability – especially for control tasks

- Resolution: from 0.12 mm

- Two adjustable switching points as window mode for 2-point control

- Teach-in operation

In a miniature housing
The FT 25-RA is also suitable for limited installation spaces thanks to its compact dimensions of 34 x 12 x 20 mm^3.

In addition to its analogue voltage output the small distance sensors also have a switching output and offer the possibility of defining a switching window by means of two switching points. Thanks to their simple operation, these sensors are suitable for straightforward measurement and control tasks at distances of up to 200 mm.

Key applications:
• Dancer roll regulation, sag monitoring
• Determining the roll diameter of an unwinding machine
• Stacking height measurement, double layer detection and height measurements in the wood processing, packaging- and handling industry
• Distance measurement and positioning on robot grippers in „pick & place" applications

FT 25 RA – Product Overview			
	Operating range	Special features	Page
FT 25-RA	20 … 80 mm / 30 ... 200 mm	Small housing with long range	148
FT 20 RA	20 … 80 mm	Small housing	150

FT 25-RA

Miniature distance sensor

PRODUCT HIGHLIGHTS

- Miniature housing with measurement ranges up to 200 mm for an easy integration and high flexibility
- High linearity and high repeatability for precise control tasks
- Almost surface independant detection on homogeneous object surfaces
- Invertible analogue characteristic
- Window mode e.g. for two-step controls separately adjustable

Optical data		
Measurement range	20 … 80 mm[1]	30 … 200 mm[1]

FT 50 / FT 80 – laser distance sensors

Precise and rapid measurement with many extras

made in Germany

Independent of reflectivity
These highly precise triangulation sensors are predestined for the detection of differing materials thanks to their high contrast-independence.

TYPICAL FT 50 / FT 80

- Laser distance sensors with a variety of measurement ranges
- Shape and colour of the target object is largely irrelevant
- High accuracy and resolutions up to 7 µm
- Rapid response time up to 1 kHz
- Intelligent teach-in user concept
- 2 switching outputs
- Analogue output: 4 … 20 mA / 0 … 10 V
- Variants with serial interface for measuring differences and thicknesses in master/slave mode
- ABS housing with rotatable plug

These distance sensors are particularly easy to commission thanks to their fixed operating distances. Voltage rises linearly with increasing distance.

Regardless of the reflectivity of the target object, these sensors provide excellent measurement results and their comprehensive range of functions is impressive.

The optional serial interface allows user-friendly configuration via PC, providing visualisation of measurement values.

FT 50 RLA 70 / 100 / 220

Distance sensor with RS485 interface

PRODUCT HIGHLIGHTS

- Largely independent of target object reflectivity (highly reflective and glossy objects)
- RS485 interface for parameterisation and measurement value output
- High resolution
- Rapid response time
- 2 switching outputs, 1 analogue output 4 … 20 mA
- High long-term stability and low temperature effects

Optical data	
Operating range	30 … 100 mm / 70 … 170 mm / 80 … 300 mm[1]
Measurement range	70 mm, 100 mm, 120 mm
Type of light	Laser, red, 650 nm
Laser Class (DIN EN 60825-1:2008-5)	2
Resolution	< 0.1 % of operating range end-value (0.1 mm / 0.17 mm/ 0.3 mm)[2]
Linearity	< 0.25 % of operating range end-value (0.25 mm / 0.42 mm / 0.75 mm)
Repeatability	< 0.25 % of measurement value

Functions	
Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Scanning distance adjustment	Via Teach-in button and control input
Adjustment possibilities	N.O. / N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. scanning distance and N.O.

Electrical data	
Operating voltage, +U_B	18 … 30 V DC
No-load current, I_0	≤ 40 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection, Q (not Type S1)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q_1 / Q_2	PNP
Output function	N.O. / N.C.
Analogue output	4 … 20 mA
Temperature drift	< 0.02 % of operating range end-value / K
Load	≤ 500 Ω
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	≥ 0.4 ms (when mean value formation = off) / 4 ms / 40 ms to end-value
Serial interface	See Selection Table

Mechanical data	
Dimensions	50 × 50 × 17 mm[3]
Enclosure rating	IP 67[3]
Material, housing	ABS, impact-resistant
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-10 … +60 °C
Ambient temperature: storage	-20 … +80 °C
Weight	43 g
Vibration and impact resistance	EN 60947-2

FT 80 RLA

Distance sensor with RS485 interface

PRODUCT HIGHLIGHTS

- Long operating distance
- 2 switching outputs + analogue output: 4 … 20 mA
- High resolution (0.1% of measurement range)
- Type S1 with serial Bus interface (RS485 half-duplex)
- Adjustable via Teach-in; Type S1 also via software
- Wide range of functions

Optical data

Operating range	250 … 750 mm[1]
Measurement range	500 mm
Type of light	Laser, red, 650 nm
Laser Class (DIN EN 60825-1:2008-5)	2
Resolution	< 0.1 % of measurement range end-value
Linearity	< 0.25 % of measurement range end-value

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Indicator LED, red	State indicator

F 55 / F 90 / F 91 / F 92 –
Laser distance sensors for long distances

Far-sighted with time-of-flight technology

■■■ made in Germany

DIST mm
3452

◀   ⟳   ▶
└── ESC ──┘

Indicator
The distance is directly Indicatored in mm by the F 90 and F 91 devices, and can even be directly read off from the device in the dark – thanks to the Indicator's background illumination.

Coil diametre
The FT 55-RLA measures the distance to the coil surface in order to activate roll changes.

TYPICAL F 55 / F 90 / F 91 / F 92

- Laser distance sensor using time-of-flight technology
- Largely independent of target object's colour and properties
- Operating range: scanner up to 10 m, with reflector up to 250 m
- Variants with analogue output and switching output
- Interfaces for maximum compatibility, SSI-compatible, RS422 (PROFIBUS and DeviceNet via gateway)
- High repeatability and high measurement rates
- Compact housings from 50 × 50 × 23 mm³

With a reflector these devices can achieve ranges of up to 250 m (FR 90 ILA).
Ranges of up to 10 m can be achieved with the scanner versions (FT 90 ILA).

Pilot laser

Correct adjustment of the F 90 at long distances is considerably simplified by using the pilot laser. This can be switched off so that no-one is irritated by it during running operation.

Long ranges of up to 250 m are no problem with time-of-flight technology – and ideal in handling and warehousing systems.

F 55 / F 90 / F 91 / F 92 – Product Overview				
	Operating distance	Functional principle	Special features	Page
FT 55-RLAP	0,5 … 5 m	Scanning on object	Compact design, high flexibility	166
FT 90 ILA	0.5 … 10 m	Scanning on object	2 switching outputs, RS422 interface, SSI-compatible, switchable red-light pilot laser	168
FT 91 ILA	0.5 … 6 m	Scanning on object	2 switching outputs, RS422 interface, SSI-compatible, switchable red-light pilot laser	170
FT 92 ILA/RLA	0.2 … 6 m	Scanning on object	2 switching outputs, 1 analogue output, switchable red-light pilot laser	172
FR 90 ILA	0.5 … 250 m	Reflector	2 switching outputs, RS422 interface, SSI-compatible, switchable red-light pilot laser	174
FR 91 ILA	0.5 … 50 m	Reflector	2 switching outputs, RS422 interface, SSI-compatible, switchable red-light pilot laser	176
FR 92 ILA	0.2 … 30 m	Reflector	2 switching outputs, 1 analogue output, switchable red-light pilot laser	178

FT 55-RLAP

Distance sensor – Time-of-flight technology (available from Q4/2013)

PRODUCT HIGHLIGHTS

- For measurement and control tasks with all object surfaces at long scanning distances
- Reliable and precise distance measurement even with inclined or bright, highly reflective or luminous backgrounds
- Compact design for an easy integration
- High flexibility thanks to invertible analogue characteristic (Qa) and window mode (Q)
- Easy installation and operation via external teach-in
- Clearly visible and precise laser light spot (laser class 1) for an easy alignment and full eye safety

Optical data

Measurement range	0.3 ... 5 m (see Selection Table)[1]		
Resolution	10 mm (12-bit)[2]		
Linearity	± 40 mm		
Repeatability	± 10 mm[2, 3]		
Hysteresis	± 15 … 20 mm		
Type of light	Laser, red 650 nm		
Laser class (DIN EN 60825-1:2008-5)	1		

Functions

FT 92 ILA / IRLA

Distance sensor

PRODUCT HIGHLIGHTS

- Long scanning distance and range
- High repeatability
- High measurement rates
- Very good price/performance ratio
- Switchable red-light pilot laser
- 2 PNP switching outputs
- 1 analogue output: 4 … 20 mA
- All outputs in measurement range freely adjustable
- Standard M12 plug

Reflector distance sensor

PRODUCT HIGHLIGHTS

- Long range of up to 250 m on specified reflector
- High repeatability
- High measurement rates
- Ideal for precise positioning tasks
- Open interfaces ensure maximum compatibility (SSI-compatible, RS422)
- Profibus and DeviceNet via gateway
- Switchable red-light pilot laser
- 2 switching outputs

Optical data	
Scanning distance	0.5 … 250 m
Type of light	Infrared, 905 nm (measurement laser) Laser, red, 650 nm (pilot laser)
Laser Class (DIN EN 60825-1:2008-5)	1 (measurement laser) 2 (pilot laser)
Resolution	0.1 mm or 0.125 mm
Linearity	± 3 mm (from 2 m)
Repeatability	< ± 2 mm
Light spot	20 × 20 mm[1]

FR 85 Rail Pilot – optical collision protection sensors

Safe movement on monorail systems

■■■ made in Germany

Monorail system with car bodies in the automotive industry

TYPICAL FR 85 RAIL PILOT

- Laser photoelectric reflex switches for preventing collisions on monorail systems
- Operating range: 0 … 6 m
- Typical measurement accuracy: ± 10 cm
- Large optics aperture angle and thus long detection range
- Cornering also possible
- 1 input and 2 PNP outputs
- RS485 interface
- Detection range adjustable externally
- Reliable suppression of foreign objects (girders, pillars)
- ABS housing: 145 × 85 × 80 mm^3

The sensor's task is to prevent collisions between vehicles on monorail systems. The Rail Pilot achieves this reliably. The distances to be maintained, and the braking distances of the monorail vehicles, depend on the load transported and on the speed – this is taken into account by means of flexibly adjustable switching distances.

Even constantly changing objects in the vicinity of the vehicles and sensors have no effect on the reliable functioning of collision prevention.

Colour, contrast and luminescence sensors

A broad spectrum

FT 25-C
RGB colour sensor
from Page 190

- *Smallest RGB colour sensor with high switching frequency of ≤ 10 kHz*
- *Precise detection of "non-colours", e.g. black, white and grey*
- *Small, precise light spot for the detection of smallest marks*

FT 50 C –
white-light colour sensor
from Page 194

- *Colour detection with simplest teach-in*
- *Patented optical technology ensures reliable detection with fluctuating scanning distances*
- *Parameterisation and online colour information via RS485*

FT 25-W/-RGB
contrast sensor
from Page 204

- *Miniature contrast sensor – 15-times smaller than standard housing*
- *Detection of minimum contrast differences through multi-colour RGB evaluation or white-light illumination*
- *Automatic selection of ideal transmission colour after teach-in*
- *High positioning accuracy thanks to minimum response time (≤ 20 μs) and very precise light spot*

FT 50 C-UV –
luminescence sensor
from Page 214

- *High flexibility through large scanning range*
- *Small, precise light spot for maximum positioning accuracy*
- *Robust reflection-resistant operation*

5 operation principles for colour detection

The attachment of colour marks that are then evaluated with a colour or contrast sensor is a proven method for identifying objects in industrial production. Even objects with differing shapes and surface properties can be very reliably detected in this way. SensoPart offers sensors with five different functional principles for colour and contrast detection.

VISOR® Color

With the VISOR® Color you can exploit the colour feature economically and thus open up numerous new application potentials. It is now just as possible to automate inspections previously carried out visually as it is to add the evaluation of the colour feature to an existing process – because the VISOR® Color is not just a colour sensor, but also offers a wide range of additional functions for object detection.

FT 25/50 C

SensoPart offers the FT 25/50 C colour sensors for the "classic" colour detection of objects and printed marks. The FT 25-RGB is well suited for the detection of one colour in fast processes.

The FT 50 C can not only differentiate between individual colours, but also user-defined colour ranges. Thanks to its high level of colour selectivity, this sensor is suitable for almost all industrial colour detection tasks.

FT 25-W/-RGB

The F 25 series also includes contrast sensors which, with their small and precise light spot, can differentiate between the slightest of contrast differences on objects or printed marks at high process speeds. The FT 25-RGB, with its multi-colour RGB evaluation, can even automatically select the ideal transmission colour (red, green or blue) for the contrast that is present.

FT 50 C-UV

Finally, the FT 50 C-UV luminescence sensor is a special product: this innovative sensor detects features that are invisible to the human eye by irradiating the target object with ultraviolet light. This sensor has a highly varied range of applications because luminophores are not only attached to labels, but can also be mixed with different materials (e.g. paint, chalk, glue and lubricants).

SENSOPART IN COLOURS

- Five different sensor principles for a wide range of uses

- Precise detection of the finest colour or grey value differences and non-colours

- Detection of self-illuminating colours and luminophores

- Numerous outputs and interfaces for simple integration in machine control systems

- Comfortable operation by means of teach-in or configuration software

- Maximum positioning accuracy, even at high process speeds

- Automatic transmission LED colour selection; communication via light spot – simple, comprehensible, clearly defined

Colour sensors

System description

Functional description

Colour sensors operate according to the energetic reflection principle, whereby the partial spectra of red, green and blue are evaluated separately. Either the three colours are emitted sequentially and the quantity of light reflected from the target object is individually registered (FT 25-C), or the sensor emits white light that is first split into the RGB partial spectra in the receiver (FT 50 C). The RGB intensity values thus determined are compared with previously taught-in reference values. The switching output is activated if the colour values are within the defined tolerance range.

A special feature of the FT 25-C colour sensor is teach-in with a "communicating" light spot: the quality of the colour detection is signalled to users by the blinking of the light spots in the various colours.

The FT 50 C colour sensor operates according to the passive three-range process with white-light LED and an optical "funnel" that we developed. This patented sensor concept allows very fine colour selection – so that even minimal colour differences can be detected – and an above-average depth of field that ensures the reliable function of the colour sensor, even with fluctuating scanning distances.

High process speed

The FT 25-C miniature colour sensor reliably switches with 10 kHz with the taught-in colour (including black and white) and is particulary suitable for use in rapid processes, e.g. in labeling machines.

Depth of field
The depth of field of the FT 50 C also varies depending on the light spot geometry:
+/– 6 mm (with default setting)
+/– 5 mm (with default setting)
+/– 2 mm (with default setting)

Scan function
In the case of heterogeneously coloured surfaces, the Scan function of the FT 50 C allows the scanning-in and storage of colour gradients. The colours within the scanned colour range are then detected.

Tolerance ranges
The detection window can be adapted by adjusting colour selectivity.

Versatile colour settings

The FT 50 C colour sensor offers very comprehensive opportunities for teaching-in and administrating colours. Additional reference colours can be taught-in, or the colour range expanded, in up to four steps. In practice, this function proves helpful when, for example, labels with fluctuating print quality require reliable detection. Larger colour ranges, as well as heterogeneously coloured surfaces or colour gradients, can be detected using the "ColourScan" function (see Figs. 1 and 2 below). In this case, high colour selectivity can be achieved with the "Scanplus" function so that the sensor reliably detects incorrect or missing colours.

As many colours as desired can be taught-in via the interface and stored in the machine controller – and called up again in the form of colour vectors (data string with a target value incl. tolerance).

The current version of the software can be obtained at **www.sensopart.com**
PC-based software (FT 50 C)

The serial interface and PC software also allow the entire bandwidth of the sensor's functions to be controlled from the PC. Thus settings can be made interactively and the sensors easily adapted to the particular application. Colour patterns can also be stored after teach-in and, when necessary, reloaded. No renewed teach-in is necessary.

ColourScan (FT 50 C)

Heterogeneously coloured surfaces can be taught-in (scanned in) with the help of the integrated Scan or Scanplus functions. If a larger colour range is scanned-in and assigned to a single channel, the sensor switches with all colours that lie within this colour spectrum (Fig. 1). An improved selectivity is achieved with the Scanplus function, with which this range can be split into several parts (Fig. 2).

Contrast sensors

System description

Functional description

Contrast sensors operate on the energetic reflection principle and detect grey value differences on matt, glossy or transparent objects and surfaces.

Switching frequency

As a result of the high switching frequency (25 kHz) of the FT 25-W and FT 25-RGB contrast sensors, the front edges of printed marks are very precisely detected, achieving maximum position accuracy. This also ensures reliable sensor switching behaviour even at very high process speeds.

White-light contrast sensors

The FT 25-W contrast sensor uses white light and has a very small and precise rectangular light spot (1×4 mm^2). This also allows the detection of very small printed marks and coloured objects with weak contrast differences. The sensor can be parameterised during running operation and, during the teach-in process, automatically adapts the switching threshold to the object colour and background.

Laser contrast sensors

These sensors operate with red laser light (Laser Class 1) and also have a very small light spot (Ø 0.7 mm in focus). This permits even very small printed marks of differing colours to be read at longer distances. During the teach-in process, the sensor automatically adapts the switching threshold to the mark colour and background.

RGB contrast sensors

The FT 25-RGB contrast sensor has three different transmission LEDs (red, green and blue). During teach-in, the sensor evaluates the taught-in contrast and then automatically selects the ideal transmission colour (red, green or blue) for the contrast present. As a result, even extremely low contrast differences can be reliably detected.

Application example
Detection of printed marks
The contrast difference between the printed marks and the unprinted paper is evaluated here.

Functional description

The detection process is based on the luminescence of certain materials, called luminophores. The sensor transmits invisible UV light at a wavelength of 375 nm. This excites the luminophores contained in the object so that they emit light in the visible range of the electromagnetic spectrum. The sensor energetically evaluates these precisely taught-in, material-specific frequencies and compares them with the taught-in value.

Luminophores can be attached to labels or mixed with a variety of materials (e.g. paints, chalk, glue and lubricants) for detection purposes. Thus, for example, paper contains optical brighteners that are excited by the UV light and reflect light (mostly blue) to the sensor.

Applications

Examples of applications include the detection of labels on glass bottles, invisible printed marks for object alignment, and the presence of oils to which luminescent materials have been added. Fluorescent chalks, paints and dyes; text markers; glues; sealants; lubricants; and optical brighteners in paper, textiles and plastics are examples of luminescent materials.

Universal
- One variant for all types of luminescence (red, blue, etc.)
- Competitors require several variants for this, because they need supplementary filters!

RGB-3 range reception system
- Reliable detection even with low amounts of luminophores in the object
- Extremely reliable detection thanks to high signal reserves
- Immune to reflections (e.g. on glass or glossy metals)
- Differentiation between different luminophores

Very good depth of field
- Detection at varying object distances, even with fluttering objects such as paper
- No fine adjustment necessary, e.g. with batch changes

Small, precise light spot
- Accurate detection of the smallest of invisible printed marks

Easy teach-in
(on device or comfortably via external connection)
- Single channel: ready-to-run

FT 25-C

RGB colour sensor in miniature housing with high switching frequency

🇩🇪 made in Germany

Reliable colour detection:
The main task of the FT 25-C RGB colour sensor is the detection of a defined colour. It is also suitable for very rapid applications thanks to its high switching frequency. Mounting by means of a dovetail and the MBD F25ST mounting rod, available as an accessory, allows easy and precise fine alignment.

🔵 TYPICAL FT 25-C

- Smallest cubic colour sensor on the market (34 × 20 × 12 mm³)

- High switching frequency of 10 kHz for rapid applications

- Detection of a taught-in colour

- Detection of "non-colours", e.g. black, white and grey

- Bright light spot with sharp contour for easy alignment and precise front-edge detection

- Static or external teach-in

- "Communicating" light spot for simplest setup

- Hermetically sealed housings (IP 69K & IP 67)

The FT 25-C RGB colour sensor is not only the smallest cubic colour sensor currently available on the market, but is also one of the quickest: with a switching frequency of up to 10 kHz it is as fast as a contrast sensor and thus also suitable for the most rapid printed mark applications. The FT 25-C can identify any colour in the visible spectrum including all the "non-colours" and also very reliably detects the smallest of colour differences. It keeps even the narrowest print marks and smallest markings in view thanks to its bright light spot with a sharp elongated contour (1 x 5 mm²).

Fits into every space

Thanks to its miniature design, SensoPart's smallest colour sensor is also easily accommodated in very restricted installation spaces, whereby the patented dovetail mounting allows user-friendly fine alignment. The operating concept is also clever: the FT 25-C is rapidly and easily configured via teach-in or control line. The quality of the colour detection is signalled via a "communicating" light spot: the blinking of the red, blue or green transmission LED provides you with a clear statement on the stability of your process.

As a result of its space-saving design and rapidity, the FT 25-C is suitable for use in numerous sectors and applications, for example, packaging and labeling machines as well as bottling lines.

7

FT 25-C – Product Overview				
	Type of light	Scanning distance	Special features	Page
FT 25-C	Red LED, green LED, blue LED	12 ± 3 mm	The world's smallest RGB colour sensor with a switching frequency of ≤ 10 kHz	192

FT 25-C

RGB colour sensor

PRODUCT HIGHLIGHTS

- Smallest RGB colour sensor with high switching frequency ≤ 10 kHz
- Precise detection of the slightest of contrast differences
- Very robust operation despite fluttering and glossy objects
- Feedback via „responding light spot" about quality of taught-in colour value

FT 50 C white-light colour sensor

Reliability despite varying object distances

made in Germany
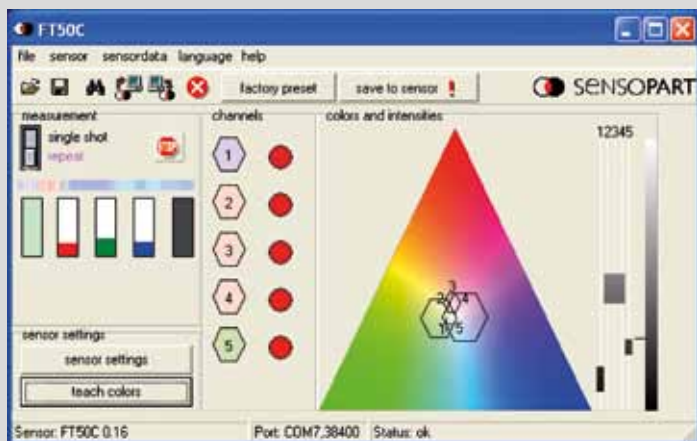

PC-based software
The entire range of sensor functions can also be controlled from a PC, thanks to the serial interface and PC software.

TYPICAL FT 50 C

- High depth of field for reliable detection despite vibrations
- Up to 5 colours or colour ranges internally, or unlimited colours via RS485 serial interface
- Three different light spot geometries available
- High colour selectivity for reliable detection despite scanning distance fluctuations
- Simple teach-in or scan-in of colours
- Up to 3 result outputs
- IO Link on request

The FT 50 C white-light colour sensor is one of the most important innovations that SensoPart has placed on the sensor market in recent years. The scanner, awarded a prestigious innovation prize, offers a considerably expanded range of functions and particularly user-friendly operation compared to conventional colour sensors.

The compact sensor can administrate up to 5 reference colours or colour ranges internally. These can either be taught-in or, particularly easily, scanned-in. Separate tolerance values for colour and intensity can be defined for each taught-in reference colour. In practice, this function proves helpful when, for example, labels with fluctuating print quality must be reliably detected. The tolerances are automatically determined when the colours are scanned in. As a result of its special patented optical system – the optical "funnel" – the FT 50 C also achieves an above-average depth of field. It can thus easily detect even inexactly trans-

ported, moving or vibrating target objects, e.g. workpieces on a conveyor belt. Rapidly moving objects are also reliably detected thanks to the high switching frequency of up to 500 Hz.

The range of interfaces on the FT 50 C is also particularly varied: depending on the variant, it has up to three switching outputs, a serial RS485 interface or an IO-Link interface. The serial interface variant is not internally restricted to a maximum of five colours: as many reference colours as desired can be taught-in and transferred to the machine controller, where they can be stored – in the form of colour vectors (target values and tolerances) – for later retrieval. This range of functions, together with the high detection reliability and very user-friendly operation, is unique in this class of sensors!

FT 50 C

Colour sensor with a switching output

PRODUCT HIGHLIGHTS

- Colours are reliably detected despite fluctuating scanning distances thanks to patented optical technology
- Very good depth of field
- Very simple setup (via button and control line)
- Even the smallest of colour differences are reliably detected due to pulsed white light
- Varying light spot sizes depending on task

FT 50 C

Colour sensor with serial switching interface

PRODUCT HIGHLIGHTS

- Colours are reliably detected despite fluctuating scanning distances thanks to patented optical technology

- Transfer of colour channel or colour value, as well as reading, modification and storage of sensor parameters, via RS485 interface

- Even the smallest of colour differences are reliably detected

- ColourScan function for detection of colour ranges

- Reliable detection of even the smallest of coloured objects

Optical data

IO Box

Expansion box for FT 50 C

PRODUCT HIGHLIGHTS

- Input/output expansion for FT50C…-S1L8 colour sensors
- Up to 32 colours can be stored
- 32 PNP output channels
- Definition of colour sequences and colour groups
- ColourScan function
- Display for simple visualisation and operator guidance
- Time function selectable
- DIN rail mounting

Functions

Off-delay	5 ms to 2000 ms in increments
On-delay	5 ms to 2000 ms in increments
Wipe function (shot)	5 ms to 2000 ms in increments
Output function	Conversion between N.C. and N.O. for each individual switching output

Electrical data

Operating voltage, $+U_B$	24 V DC $\pm$ 10 %
No-load current, I_0	$\leq$ 250 mA
Switching output, Q	32 $\times$ PNP
Switching frequency, f (ti/tp 1:1)	166 Hz in combination with colour sensor FT 50 C … S1L8
On-delay t_{On} switching output	$\leq$ 2 ms
Off-delay t_{Off} switching output	$\leq$ 2 ms
Maximal permissible cable length	Power supply 3 m, otherwise 30 m
Serial interface	RS485 Z/B / RS485 Y/A

Mechanical data

Dimensions	107.6 $\times$ 104.2 $\times$ 60.7 mm^3 (lid closed)

FT 25 – Contrast sensor

Miniature housing, maximum performance

■■■ made in Germany

Rod mounting MBD F 25ST *allows user-friendly and precise sensor alignment (see accessories).*
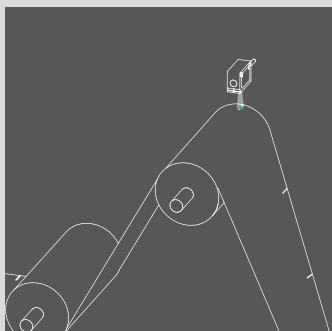

Areas of application:

- Printing machines
- Labelling machines
- Horizontal packaging machines
- Vertical packaging machines
- Bottling plants

TYPICAL FT 25-W/-RGB

- Precise detection of any printed marks

- High positioning accuracy thanks to minimum response time

- High switching frequency of 25 kHz with compact miniature housing

- Small, precise light spot with sharp contour for easy sensor alignment and detection of even the smallest of printed marks

- Feedback via light spot (simple, comprehensible, clearly defined)

- Dynamic, static or external teach-in

- High depth of field

- White-light LED or RGB diode options available
Out with the old, in with the new: The contrast sensors from the F 25 series are assembly and connection compatible with the conventional standard housing (image on the left). The fastening bores are aligned in the same distance from each other. The integrated cable with a M12-connector fits to the corresponding mating connector.

Contrast sensors are mainly used for printed mark detection in very rapid processes in the print and packaging industries. SensoPart offers high quality products – with white-light LED (FT 25-W, FT 20WT series), red-light laser (FT 25-RL) or RGB diode (FT 25-RGB) options.

While the white-light and RGB scanners can detect even the smallest of contrast differences, the red-light laser offers the advantage of a particularly small light spot (Ø 0.7 mm in focus) in combination with a long scanning distance.

The sensors can be configured during running operation via teach-in, whereby the switching threshold is automatically adapted to object and mark colours and the background. After teach-in, the quality of the taught-in contrast is communicated via the light spot. Users thus receive unambiguous feedback on how reliable their process is.

FT 25 / FT 20 – Product Overview				
	Type of light	Scanning distance	Special features	Page
FT 25-W	White LED	12 ± 2,5 mm	Minimal response time	206
FT 25-RGB	Red LED, green LED, blue LED	12 ± 3 mm	Automatic selection of ideal transmission colour, minimal response time	208
FT 25-RL	Laser ⚠	250 mm	Long scanning distance	210
FT 20 WT	White LED	17 ± 2 mm		212

FT 25-W

White-light contrast sensor

PRODUCT HIGHLIGHTS

- Precise detection of the slightest contrast differences
- Very robust operation despite fluttering and glossy objects
- Simple alignment through very precise and easily visible light spot
- Housings that are many times smaller than standard housings – and offer better performance
- Very high positioning accuracy with 10 µs scanning

FT 25-RGB

Multi-colour contrast sensor

PRODUCT HIGHLIGHTS

- Precise detection of the slightest of contrast differences through multi-colour RGB evaluation
- Very robust operation despite fluttering and glossy objects
- Simple alignment thanks to very precise and easily visible light spot
- Communication via 3-colour light spot (simple, comprehensible, clearly defined)
- Very accurate positioning due to rapid scanning rate of 10 µs

Optical data

Scanning distance	12 mm
Depth of field	± 3 mm
Type of light	Red LED Green LED Blue LED
Light spot size	1 x 4 mm^2

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Sensitivity adjustment	Via teach-in button and control line
Teach-in modes	Mode 1: with running process Mode 2: with standing process
Adjustment possibilities	LO / DO via Teach-in button and control line Button lock via control input

Electrical data

Operating voltage, +U$_B$	10 … 30 V DC^1
No-load current, I$_0$	≤ 25 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U$_B$ / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP / NPN, push-pull

FT 50 C-UV – luminescence sensor

An eye for the invisible

■ made in Germany

Simple sensor adjustment via Teach-in button or external control line.

The FT 50 C-UV is very robust and dazzle-proof due to its reliable optical concept.

TYPICAL FT 50 C-UV

- Very reliable detection regardless of object surface
- Teach-in for setup of differing objects by means of button or external control line
- Reliable detection even with minimum amounts of luminophores
- Wide scanning range provides reliable detection with varying object distances
- Small precise light spot for maximum positioning & small part accuracy
- Robust and dazzle-proof operation, e.g. on glass and highly reflective metals
- Rotatable plug (270°)
- UL certification

Low contrast or colour differences between printed marks and objects, or uneven object surfaces (e.g. rough, mottled or printed surfaces), frequently prove problematic for conventional colour and contrast sensors. The evaluation of luminescent features offers a simple and reliable alternative in these cases, or when marks are intended to be invisible on a product. Thus printed labels or the package inserts for medicines can be checked, chalk marks on wooden surfaces can be detected, and bottles can be positioned in the filling plant with the help of invisible printed marks. Other applications include checking the presence of oils with added luminescent materials, or monitoring glue application on paper.

With its three-range reception system, the FT 50 C-UV can evaluate luminescences over the entire spectral range of visible light – users can easily choose the desired RGB partial spectrum via teach-in. This differentiates the SensoPart solution from most of the UV sensors available on the market, which require appropriate filters to achieve this. The FT 50 C-UV can also distinguish between differing luminophores on the basis of the frequency of the emitted light.

The powerful sensor detects even minimal amounts of luminophores, and thus operates very reliably. Highly reflective surfaces or varying object distances, e.g. with fluttering objects such as paper or when there is a batch change, have no effect at all on proper function. An absolutely reliable automation solution made by SensoPart!

Photoelectric sensors and proximity sensors are the standard sensors in automation technology. At SensoPart you will find the right sensor for almost every conceivable application. Our product portfolio offers a comprehensive selection of differing sizes, ranges and switching variants. Regardless of whether you choose a sub-miniature sensor for restricted machine conditions or a large housing with a particularly long range or scanning distance – all our sensors share excellent performance data, high reliability and solid workmanship "made in Germany".

Our photoelectric sensors and proximity sensors offer, for example, precise background suppression, extremely accurate small-part detection or reliable detection of transparent objects. And they operate extremely reliably in harsh industrial conditions: our current sensor series have tightly sealed (IP 69K / IP 67) plastic housings and are immune to cleaning according to the Ecolab standard.

Mounting and alignment are easy and rapid with products from SensoPart: well thought-out, user-friendly accessories such as the dovetail mounting offered by some of our series, the adjustment possibilities via Teach-in button and control input, or the Auto-detect function (only available from SensoPart), with which sensors can automatically determine whether PNP or NPN wiring is present – so that only one sensor variant is required.

The SensoPart portfolio not only contains powerful, reliable and solid products for standard applications, but also real highlights. Our new FT 25-RHD proximity sensor, for example: its highly precise background suppression, the lowest black/white-shift currently available on the market, and the long scanning distance ensure absolutely reliable switching behaviour – without impairment by varying object surfaces and colours, or critical backgrounds. Or our FT 10-RLH sub-miniature laser scanner – the only one of its size with adjustable background suppression. Or … see for yourself on the following pages!

■■ made in Germany

TYPICAL SENSOPART

- SensoPart develops, produces and sells retroreflective pho-toelectric sensors with the best background suppression on the market – thanks to SensoPart ASIC technology

- Highly developed laser technology – precise and small laser light spots for extremely accurate small-part detection

- Sensors with the best black/white-shift for reliable switch-ing behaviour regardless of object colour and surface

- Patented sensor designs and mounting systems

- Differing transmission light sources for the most varied of requirements: laser, LED, or infrared light transmitters

- Wide variety of adjustment possibilities: potentiometer, teach-in, external control line or fixed pre-setting

- Cuboid or cylindrical housing options

- Robust workmanship: glass-fibre-reinforced plastic housings (IP 69K / IP 67) or metal housings, stable plug connections made of plastic and metal, as well as metal-reinforced drilled holes for mounting

- Internationally recognised UL-certification

- Ecolab-certification

- Safe operation thanks to Laser Class 1

- Intelligent mounting solutions for easy mounting and adjustment

- **IO**-Link
A challenge for every sensor

Polished covering panels on machinery, blinking warning lamps on passing vehicles, moving machine parts, sunlight coming through a window – all these are background effects that can make detection of the actual target object considerably more difficult. So it is a major advantage if one uses sensors that one can rely on: proximity sensors with background suppression from SensoPart. They only see what they are supposed to see: the object itself – regardless of the material, shape and colour – and nothing else!

Object detection by means of distance measurement

SensoPart proximity sensors with background suppression can always differentiate between object and background even in strongly reflective environments. The sensor measures the distance to the object, P_1, and to the possible background, P_2, according to the triangulation process and not the reflectivity of the object. The signal, P_2, coming from the background is then cut out. SensoPart has implemented the detection principle of distance measurement with incomparable precision. This high quality could be achieved because we have developed an optoelectronic, integrated circuit (an ASIC), in which the optical receiver cell and the evaluation electronics are integrated in the smallest of spaces

3

4

8
Technology provides the technical edge

Thanks to its tiny dimensions, the ASIC microchip even fits into the sub-miniature sensors of the F 10 series. Thus SensoPart offers the world's smallest laser sensor with adjustable background suppression.

With the latest generation F 10, F 25, and F 55 series, SensoPart offers photoelectric proximity sensors with the best background suppression currently available.

Your advantage is our priority

Reliable object detection
- Regardless of size, shape, colour, material and surface properties of the target object
- Detection using the distance measurement principle: precise and reliable

High process stability
- Reliable suppression of undesirable reflections and ambient light
- Suppression of moving parts in the background (e.g. conveyor belts, machine parts, persons)
- Reliable detection of the target object even when close to the background

The economical solution
- Usable in all task areas
- Rapid commissioning thanks to simple teach-in
- High machine run-times through quality sensors from SensoPart, made in Germany

1 *Reliable detection of the thinnest tubes in front of metallic backgrounds thanks to focused laser light spot and precise background suppression.*

2 *Detection of black foam rubber pads against reflective backgrounds.*

3 *Strongly reflective CDs are reliably detected against metallic backgrounds and with ambient light effects.*

4 *Solar wafers with shimmering blue surfaces against polished metal surfaces with ambient light reflections are reliably detected.*

Photoelectric sensors and proximity sensors

System description

Retroreflective photoelectric sensors
The transmitter and receiver are accommodated in a single housing in retroreflective photoelectric sensors. The light emitted by the transmitter hits a reflector and is reflected. The receiver evaluates the reflected light. The advantage lies in the small size of the reflector. It is also easy to install because it is a passive element and thus requires no connections.

Like through-beam photoelectric sensors, retroreflective photoelectric sensors are often selected according to the desired range. Because the light has to travel the path from the sensor to the reflector twice one also talks of the two-way photoelectric sensor. The light from the transmitter is, explained simply, emitted in a cone shape. This means that the cross-section of the light cone increases with rising range. This is also why a larger reflector is needed at longer ranges than at shorter distances. The range is therefore quoted in the data sheet in relation to the type of reflector.

Laser sensors provide an almost parallel light beam. Whereby the light beam is extremely fine and parallel over the entire operating range. This advantage is, above all, used when the smallest of objects have to be detected along the entire operating range. Regardless of the physical principle, all retroreflective photoelectric sensors from SensoPart have a so-called polarisation filter. Polarisation filters are optical filters that let the light beams through only in one direction. Use of a polarisation filter in combination with pyramidical reflectors can also allow the reliable detection of reflective objects by retroreflective photoelectric sensors.
Checking completeness
The presence of the inserted components must be checked before further production steps.

The autocollimation principle
With retroreflective photoelectric sensors one speaks of the autocollimation principle when the light reflected from the reflector travels parallel to itself (i.e. within itself). The light emitted by the sensor hits a reflector and is reflected. The reflected light is then deflected to a receiver by a semi-transparent mirror and evaluated.

The autocollimation principle

Unlike the double-lens system, a retroreflective photoelectric sensor using the autocollimation principle has a very homogeneous and narrow optical path. Its switching point is largely independent of the entry direction of the target object.

A major advantage of sensors with the autocollimation principle is detection from a range of 0 mm. There is thus, unlike the double-lens system, no blind zone.
Monitoring bottles
The retroreflective photoelectric sensor specially developed for this purpose achieves reliable detection of transparent objects.

Through-beam photoelectric sensors

would reduce the available range. The range quoted in the data sheet should not be exceeded – in order to ensure functionality in poor operating conditions.

When using deflector mirrors, the total path to be monitored should be less than the range quoted in the data sheet.
A through-beam photoelectric sensor has a separate transmitter and receiver. This means that light only travels the path between the transmitter and the receiver once. For this reason one speaks of through-beam photoelectric sensors.

The range is of decisive importance when using through-beam photoelectric sensors. Photoelectric sensors are principally selected according to their range. In the case of very critical operating conditions, such as high dust levels or intense steam generation, care must be taken to ensure that the photoelectric sensor is not operated at its limit range. Any clouds of steam

Detecting workpieces in harsh environments
Through-beam photoelectric sensors can also provide dependable detection even under poor conditions – thanks to their high level of reliability.

Photoelectric sensors and proximity sensors

System description

| Proximity sensors with background suppression |
Advantages

- Independent of object colour and surface
- Reflections in the background are reliably suppressed
- Robust in sunshine
- Scanning distance adjustable according to applications

Differing object colours and surfaces can seriously affect the detection behaviour of a diffuse scanner. As a result of the purely energetic evaluation it is not possible, for example, to detect a black object against a white background. The white background reflects more light than the object itself.

The background suppression process was developed in order to be able to reliably master such tasks. Whereby both the light returning from the background as well as that reflected by the object are evaluated. The light hits two different positions (P_1' & P_2') on the receiver element.

So it is not the returning energy, but the geometrical position of the target object that is evaluated (triangulation). With this process one can, for example, reliably detect a dark object on a light conveyor belt.

There are various ways to physically achieve background suppression. Generally one differentiates between a fixed and an adjustable background suppression.

In the case of fixed background suppression, the transmitter and receiver elements are fixed-mounted. The operating range is defined by the overlapping of the transmitter and receiver angles. Objects outside this operating range cannot be detected.

In the case of adjustable background suppression, the parameters for object detection can be set mechanically via a rotary switch or electronically via teach-in. This provides much more flexible use.

Laser devices are particularly suitable for detecting the smallest of objects. A red-light sensor should be employed for larger objects.
Monitoring pins

The fine light beam of the laser sensor permits the precise detection of even such small objects without any impairment by the background.

Proximity sensors
The transmitter and receiver of a proximity sensor are accommodated in a single housing. The light emitted by the transmitter hits the target object, which reflects the light. This returning light is evaluated by the receiver. The advantage of this method is that no reflector is required.

Because the scanner evaluates the reflected light and its energy, the range of conventional scanners (also called energetic or diffuse scanners) is largely dependent on the object's colour and its surface properties. Because black objects strongly absorb light, diffuse scanners can only achieve a very short range here. The surface structure is responsible for the type of reflection. Very rough, heterogeneous surfaces reflect diffusely, i.e. in all directions. Only a small percentage of the reflected light returns to the receiver. The scanning distance in this case is also low.

Proximity sensors based on energetic evaluation are therefore particularly suitable for the detection of larger objects or of objects whose material colour and surface properties remain constant.

One must also ensure that the quantity of light reflected back from the background is not greater than that reflected by the object itself. This effect occurs, for example, when a black object is in front of a white background. In this case detection with an energetic scanner is impossible. The use of a scanner with background suppression is recommended here.

The reliable detection of objects is possible if the background of the object is free, for example when an energetic scanner is mounted transversely over a conveyor belt. The setting of the sensor on the varying object surfaces and backgrounds takes place by means of a mechanical rotary switch on the sensor or via teach-in. The sensor can be set to a maximum scanning distance for a detection task without a background. A precise setting is necessary for applications with a background.
Rejection of uncoated parts
Brightness differences can be reliably detected by a diffuse scanner.

F 10 – family of sub-miniature sensors

Small housings, great performance

TYPICAL F 10

- Sub-miniature sensor for installation in the smallest of spaces and in moving machine parts

- The world's smallest laser sensor with background suppression, adjustable via teach-in

- Sensors as LED or laser versions

- F 10 Bluelight: specially designed for scanning solar wafers and strongly light-absorbing objects

- User-friendly commissioning via electronic teach-in button or control wire

- Well thought-out mounting accessories for rapid and simple integration

Simple mounting:
Mounting using a dovetail that permits fine retro-adjustment of the sensor is particularly recommended when space is limited.

Special characteristics:
The glass-fibre-reinforced plastic housing with its integrated mounting sleeve, dovetail guide on the back, and laser-marked indelible type code are characteristic of the F 10.

Mini-sensor with maximum ease-of-use:
Simple commissioning with an electronic teach-in button and easily visible status LEDs is by no means typical for housings of this size.

The sensors of the F 10 series, available as LED and laser versions, form one of the most comprehensive series on the market in sub-miniature housings. Their precise background suppression, adjustable via teach-in, makes the sensors unique. The light spot of the F 10 laser sensors also remains so focused that small parts in the millimetre range can still be reliably detected even at long distances – for example, a wire with a diameter of 0.5 mm at a distance of 60 mm. One highlight of the new F 10 LED sensors is the F 10 Bluelight with its blue transmission LED, specially developed for detecting solar wafers and strongly light-absorbing objects using the scanning principle.

The F 10 sensors not only impress through their excellent performance data, but also through their unmistakeable design with special features – unique in this size of housing. The dovetail mounting system considerably simplifies fine adjustment, particularly in difficult installation locations, and the various connection variants allow rapid commissioning and replacement. The mounting holes of the sub-miniature sensors are reinforced with metal eyelets. A small sensor that will give users great pleasure!

8

F 10 Product Overview

	Type of light	Adjustment	Scanning distance/range	Special features	Page
Photoelectric proximity sensors with background suppression					
FT 10-RLH	Laser	Teach-in	60 mm	The only scanner with scanning distance adjustment	228
FT 10-RLHR	Laser	Teach-in	60 mm	Broad-beam light spot	230
FT 10-B-RLF	Laser	Fixed focus	15 mm / 30 mm		232
FT 10-RH	LED	Teach-in	70 mm		234
FT 10-RF	LED	Fixed focus	15 mm / 30 mm / 50 mm		236
FT 10-BF Bluelight	LED, blue	Fixed focus	30 mm	Blue transmission LED for strongly light-absorbing objects	238
Retroreflective photoelectric sensors					
FR 10-RL	Laser	Teach-in	2 m	Long range, precise small-part detection	240
FR 10-R	LED	Teach-in	1.6 m	Long range	242
Through-beam photoelectric sensors					
FS/FE 10-RL	Laser	Teach-in	3 m	Sensor pair, very accurate object positioning	244
FS 10-RL/FE 10-RL	Laser	Teach-in	3 m	Transmitter/receiver, very accurate object positioning	246

FT 10-RLH

Laser photoelectric proximity sensor with background suppression

CE

IP 67

ECOLAB

PRODUCT HIGHLIGHTS

- Sub-miniature sensor with laser light and adjustable background suppression

- Precise and reliable switching behaviour, even with varying object surfaces and colours

- Reliable operation even with highly reflective machine parts in the background, thanks to SensoPart ASIC technology

- Particularly suitable for detecting the smallest of parts and for installation in extremely confined spaces

Optical data		Functions	
Scanning distance	6 … 60 mm[1]	Indicator LED, green	Operating voltage indicator
Adjustment range	10 … 60 mm[1]	Indicator LED, yellow	Switching output indicator
Type of light	Laser, red, 655 nm	Scanning distance adjustment	Via Teach-in button and control input
Light spot size (total detection area)	1×3 mm[2]	Adjustment possibilities	Button lock via control input
Laser Class (DIN EN 60825-1:2008-5)	1	Default settings	Max. scanning distance and N.O.

Electrical data		Mechanical data	
Operating voltage, $+U_B$	10 … 30V DC[2]	Dimensions	$21.1 \times 14.6 \times 8$ mm[3]

FT 10-BF Bluelight

Bluelight photoelectric proxmity sensor with background suppression, fixed focus
(available from Q4/2013)

CE
IP 67
ECOLAB

PRODUCT HIGHLIGHTS

- Sub-miniature sensor with blue transmission LED and precise fixed background suppression
- Reliable switching behaviour with strongly light-absorbing objects, e.g. solar wafers
- Reliable operation without reflector - even with critical surfaces
- Tamper-proof sensor design - no misalignment possible
- Simple mounting and adjustment through innovative dovetail clamp mounting

Optical data		Functions

FR 10-RL

Laser retroreflective photoelectric sensor

PRODUCT HIGHLIGHTS

- Sub-miniature sensor for installation in the smallest of spaces
- Bright, precise laser light spot for optimum small-part detection and simple alignment
- Suitable for numerous different reflectors
- User-friendly operation via electronic Teach-in button or control line
- Robust, glass-fibre-reinforced plastic housings

Optical data

Limit range	0.1 … 2.5 m[1]
Operating range	0.1 … 2 m[1]
Type of light	Laser, red, 655 nm
Light spot size	See diagram
Laser Class (DIN EN 60825-1:2008-5)	1

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Sensitivity adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running process Mode 2: during standing process
Adjustment possibilities	N.O. / N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. range and N.O.

Electrical data

Operating voltage, +U_B	10 … 30 V DC[2]
No-load current, I_0	≤ 12 mA
Output current, Ie	≤ 50 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Switching output, Q	PNP / NPN (see Selection Table)
Output function	N.O. / N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN (only 4-pin design)	+U_B = teach-in -U_B = button locked Open = normal operation

Retroreflective photoelectric sensor (available from Q4/2013)

CE
IP 67
ECOLAB

PRODUCT HIGHLIGHTS

- Sub-miniature sensor for installation in the smallest of spaces
- Despite very small sensor housing very long operating range of 1.6 m
- Fast response time: only 500 µs
- Static and dynamic teach-in via electronic teach-in button or control line
- Simple mounting and adjustment through innovative dovetail clamp mounting

F 25 – the miniature sensor family of the new generation

The best of its type

■■■ made in Germany

The specialist for glass detection:
The FR 25-RGO retroreflective photoelectric sensor has been specially designed for detecting transparent objects. It offers absolutely precise and reproducible switching behaviour thanks to its autocollimation principle and automatic adaptation of the switching threshold (the DELTA function).

(Left) **Simple mounting, precise adjustment:** *The robust aluminium dovetail mounting is particularly suitable when installation space is limited. It allows easy and accurate fine adjustment of the sensor after installation.*

Precise background suppression:
Thanks to extremely precise background suppression, the sensors of the F 25 series are completely immune to reflective and glossy machine parts and background effects. Together with switching that is independent of colour and object properties, F 25 sensors are the best on the market.

TYPICAL F 25

- The best black/white-shift on the market in this sensor class
- Precise background suppression thanks to the ASIC microchip
- Auto-detect: automatic adjustment of the switching output (PNP/NPN), unique on the market
- Precise detection of transparent objects of any shape (FR-25-RGO with DELTA function)
- Long ranges with compact miniature housing
- All sensors available in laser and LED designs
- Robust glass-fibre-reinforced plastic housings (IP 69K & IP 67, Ecolab)
- Robust sensor design with metal plug and mounting holes reinforced with metal inserts
- Simplest mounting thanks to dovetail, patented rod mounting and clamping jaws
- Safe operation thanks to Laser Class 1

The right sensor for every application: the new F 25 sensor family from SensoPart offers a very large range of variants – from the LED through-beam photoelectric sensor to the laser photoelectric proximity sensor with adjustable background suppression. Everything that the user could want is in the programme, including special applications: the FR 25-RGO autocollimation sensor detects transparent objects of any shape whilst automatically adapting its switching threshold to the operating conditions (the DELTA function).

Whether small-part detection or checking presence on a conveyor belt, the excellent performance of the F 25 series is always

impressive. Thus the FT 25-RHD scanner not only offers very precise background suppression, but also the best black/white-shift in its class.

The robust design with tightly sealed housings (IP 69K & IP 67), the tough metal plugs and mounting holes with metal inserts, the simple dovetail mounting, the easy setup via teach-in or control input, and the many other clever details ensure uncomplicated and efficient operating processes. Not to mention the Auto-detect function that is exclusive to SensoPart: sensors equipped with it autonomously detect whether there is PNP or NPN wiring.

F 25 – Product Overview					
	Type of light	Adjustment	Scanning distance / range	Special features	Page
Photoelectric proximity sensors with background suppression					
FT 25-RLH	Laser	Teach-in	120 mm	Most accurate small-part detection	250
FT 25-RH	LED	Teach-in	200 mm		252
FT 25-RHD	LED	Teach-in	400 mm		254
FT 25-RF1/2	LED	Fixed focus	60 mm / 80 mm		256
Photoelectric proximity sensors					
FT 25-RL	Laser	Teach-in	250 mm	Detection of minimal grey value differences	258
FT 25-R	LED	Teach-in	800 mm		260
Retroreflective photoelectric sensors					
FR 25-RGO	LED	Teach-in	2 m	Autocollimation, detection of transparent objects	262
FR 25-RGO2	LED	Teach-in	2 m	Autocollimation	264
FR 25-RLO	Laser	Teach-in	4 m	Autocollimation, most accurate small-part detection	266
FR 25-RL	Laser	Teach-in	15 m	Most accurate small-part detection	268
FR 25-R	LED	Teach-in	7 m		270
FR 25-RF	LED	Fixed setting	5 m		272
Through-beam photoelectric sensors					
FS/FE 25-RL	Laser	Teach-in	20 m	Most accurate small-part detection	274
FS/FE 25-R	LED	Teach-in	15 m		276
FS/FE 25-RF	LED	Fixed setting	6 m		278

FT 25-RLH

Laser photoelectric proximity sensor with background suppression
PRODUCT HIGHLIGHTS

- Precisely adjustable background suppression
- Reliable switching despite varying object colours and surfaces
- Reliable operation even with highly reflective backgrounds, thanks to SensoPart ASIC technology
- Particularly suitable for the detection of the smallest of objects
- Simple alignment thanks to easily visible light spot
- Robust glass-fibre-reinforced plastic housings

Optical data	
Scanning distance	4 … 120 mm[1]
Adjustment range	10 … 120 mm[1]
Type of light	Laser, red, 650 nm
Light spot size	See diagram
Laser Class (DIN EN 60825-1:2008-5)	1

Functions	
Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Scanning distance adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running process Mode 2: during standing process
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. scanning distance and N.O.

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN[3]	$+U_B$ = teach-in $-U_B$ = button locked Open = normal operation

Mechanical data	
Dimensions	34 × 20 × 12 mm[3]
Enclosure rating	IP 69K & IP 67[4]
Material, housing	ABS
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C[5]
Ambient temperature: storage	-20 … +80 °C
Weight (plug device)	10 g
Weight (metal plug device[6])	10 g
Weight (cable device)	40 g
Weight (pigtail)	20 g
Vibration and impact resistance	EN 60947-5-2

[1] Reference material: white, 90 % reflectivity   [2] Max. 10 % ripple, within U_B, ~ 50 Hz / 100 Hz   [3] Only 4-pin design   [4] With connected IP 67 / IP 69K plug   [5] UL: -20 °C... + 50 °C

FT 25-RHD

Photoelectric proximity sensor with background suppression

CE
IP 69k
c UL us LISTED
ECOLAB

PRODUCT HIGHLIGHTS

- Auto-detect photoelectric proximity sensor with real PNP and real NPN functions
- Precisely adjustable background suppression
- Long scanning distance of 400 mm with small and compact housings
- Reliable operation even with highly reflective backgrounds, thanks to SensoPart ASIC technology
- Simple alignment thanks to easily visible light spot
- Robust glass-fibre-reinforced plastic housings

FT 25-R

Diffuse photoelectric proximity sensor

PRODUCT HIGHLIGHTS

- Differentiates between even the slightest of grey value differences
- Sensor settings via teach-in and control input
- Simple alignment thanks to easily visible light spot
- Robust glass-fibre-reinforced plastic housings
- Durable laser printing

Optical data

Scanning distance	0 … 800 mm[1]
Adjustment range	20 … 800 mm[1]
Type of light	LED, red, 632 nm
Light spot size	See diagram

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Sensitivity adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running process Mode 2: during standing process
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. scanning distance and N.O.

Electrical data

Operating voltage, $+U_B$	10 … 30 V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN	$+ U_B$ = teach-in $- U_B$ = button locked Open = normal operation

Mechanical data

Dimensions	34 × 20 × 12 mm[3]
Enclosure rating	IP 69K & IP 67[3]
Material, housing	ABS

FR 25-RGO

Retroreflective photoelectric sensor for detection of transparent objects

PRODUCT HIGHLIGHTS

- Reliable detection of transparent objects regardless of shape

- Autocollimation principle: reliable and precise detection from a range of 0 mm

- DELTA function (Dynamic Evaluation of Light for Threshold Adaption): dynamic sensor adaptation to changing environmental conditions – dust and dirt have no effect

- Precise and easily visible light spot with sharp contour for easy alignment of the sensor

FR 25-RLO

Autocollimation laser retroreflective photoelectric sensor

PRODUCT HIGHLIGHTS

- Reliable small-part detection over the entire operating range from a size of 0.2 mm
- Precise front-edge detection even in fastest automation processes thanks to a high switching frequency of 10 kHz
- Constant detection position with lateral object approach over the entire operating range for maximum switching point and positioning accuracy

Retroreflective photoelectric sensor, fixed setting

PRODUCT HIGHLIGHTS

- Economical solution for numerous applications
- Tamper-proof sensor design – no misalignment possible
- Suitable for a wide variety of different reflectors
- Simple alignment thanks to easily visible light spot
- Robust glass-fibre-reinforced plastic housings

Optical data

Limit range	0.1 … 5 m[1]
Operating range	0.1 … 3 m[1]
Type of light	LED, red, 632 nm
Light spot size	See diagram
Polarising filter	Yes

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Adjustment possibilities	N.O./N.C. via control input

Electrical data

Operating voltage, $+U_B$	10 … 30V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN	$+U_B$ = N.C. $-U_B$ / Open = N.O.

Mechanical data

Dimensions	34 × 20 × 12 mm[3]
Enclosure rating	IP 69K & IP 67[3]
Material, housing	ABS

F 55 – family of photoelectric sensors with high-quality housings

The compact class with long ranges

■■■ made in Germany

Always sparkling clean
Neither bubble baths with aggressive chemicals nor high-pressure rinsing processes with jets of water or steam can damage the tightly sealed stainless steel housings of the F 55 series. No deposits can adhere during the cleaning process due to the completely smooth housing surface with flush inset operating elements.

TYPICAL F 55

- Glass-fibre-reinforced plastic or stainless steel housings (IP 69K & IP 67, Ecolab)

- Bright, easily visible, light spot with sharp contour even in daylight

- Precise background suppression and minimal black/white-shift

- User-friendly operation of all diffuse variants via electronic Teach-in button or control line

- Laser or LED options

- Two dovetail guides for simple sensor alignment

- Well thought-out mounting accessories

SensoPart sets new standards in the compact class with its F 55 family of photoelectric sensors. The products in this series combine excellent performance data with a robust housing design and many user-friendly details. They guarantee reliable detection by means of focused laser light or red-light LED with precise background suppression.

The sensors of the F 55 series have a very high light intensity: the photoelectric proximity sensor with background suppression, for example, reaches a scanning distance of up to 5000 mm. The bright, sharply contoured light spot is still easily visible even at long distances and in intense daylight, considerably simplifying commissioning.

The F 55 series covers all standard applications in industrial automation: whether for part detection in the automotive industry or for sorting tasks in machine construction – the sensors excel everywhere with their excellent performance. The food industry-enabled tightly sealed stainless steel variants (IP 69K) with Ecolab certification – rounding out the comprehensive sensor programme – shine in all regards.

F 55 – Product Overview					
	Type of light	Adjustment	Scanning distance / range	Special features	Page
Photoelectric proximity sensors with background suppression					
FT 55- RLH	Laser	Potentiometer	800 mm		282
FT 55-RL2H	Laser	Potentiometer	1000 mm	Precise small-part detection at long scanning distances	284
FT 55-RLHP	Laser	Teach-in	5000 mm	Very long scanning distances	286
FT 55B-RH	LED	Potentiometer	800 mm		288
FT 55-RH	LED	Potentiometer	1200 mm		290

FT 55-RLH

Laser photoelectric proximity sensor with background suppression

PRODUCT HIGHLIGHTS

- Precisely adjustable background suppression – reliable operation even with highly reflective and glossy backgrounds

- Particularly suitable for the detection of the smallest of objects

- Very small, easily visible laser light spot

- Precise scanning distance adjustment by means of potentiometer

- Plug and cable connection rotatable

Optical data	
Scanning distance	5 … 800 mm[1]
Type of light	Laser, red, 655 nm
Light spot size	See diagram
Laser Class (DIN EN 60825-1: 2008-05)	1

Functions		
Indicator LED, green	Operating voltage indicator	
Indicator LED, yellow	Switching output indicator / contamination indicator	
Scanning distance adjustment	Via potentiometer	
Adjustment possibilities	N.O./N.C. via control input	
Default settings	Max. scanning distance (6 %)	

Electrical data	
Operating voltage, $+U_B$	12 … 30V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN	$+U_B$ = N.C. $-U_B$ / Open = N.O.

Mechanical data	
Dimensions	50 × 50.08 × 23 mm[3]

FT 55-RLHP

Laser photoelectric proximity sensor with background suppression – Time-of-flight technology
(available from Q4/2013)

PRODUCT HIGHLIGHTS

- For detection tasks with all object surfaces at high scanning distances
- Reliable object detection even with inclined objects or bright, highly reflective or luminous backgrounds
- Compact housing for an easy integration
- Simple teach-in (also external)
- Clearly visible and precise laser light spot (laser class 1) for an easy alignment and full eye safety

Optical data			Functions	
Scanning distance	0 … 5 m (see Selection Table)[1]		Indicator LED 1 green	Operating voltage indicator
Adjustment range	0.1 … 5 mm		Indicator LED 1 yellow[2]	Switching output indicator Q2
Hysteresis	± 15 … 20 mm		Indicator LED 2 yellow	Switching output indicator Q resp. Q1
Type of light	Laser, red 650 nm		Scanning distance adjustment	Via Teach-in Button and control input
Laser class (DIN EN 60825-1:2008-5)	1		Adjustment possibilities	N.O. / N.C. via Teach-in Button and control input Key lock via control input
			Default settings	Max. scanning distance and N.O.

Electrical data			Mechanical data	
Operating voltage +U_B	18 … 30 V DC		Dimensions	50 × 50 × 23 mm³
No-load current I_0	≤ 60 mA		Enclosure rating	IP 67 & IP 69K[3]
Output current le Q	≤ 100 mA		Material, housing	ABS
Protection circuits	Reverse polarity protection U_B / short-circuit protection (Q)		Material, front screen	PMMA
			Type of connection	See Selection table
Protection class	2		Ambient temperature: operation	-40 … +60 °C
Power On Delay	< 300 ms		Ambient temperature: storage	-40 … +80 °C
Switching output Q	1 × PNP/NPN/Auto-Detect 2 × PNP/NPN/Auto-Detect		Weight (plug device)	125 g
Output function	N.O. / N.C.		Resistance to vibration and impacts	EN 60947-5-2
Switching frequency f (ti/tp 1:1) Q	≤ 500 Hz			
Response time Q	1 ms			
Temperature drift	< 0.1 %/K			
Warm-up time	20 min.			
Control input IN	+U_B = Teach-in -U_B = Button locked Open = normal operation			

[1] Reference material 90 % reflectivity   [2] Only variants with 2 switching outputs   [3] With connected IP 67 / IP 69K plug

FR 55-RLO

Autocollimation laser retroreflective photoelectric sensor

PRODUCT HIGHLIGHTS

- Reliable small-part detection from a size of 0.2 mm at a scanning distance of 0–5 m

- Precise front-edge detection even in fastest automation processes thanks to a high switching frequency of 5 kHz

- Reliable detection of objects through the smallest of openings thanks to autocollimation; therefore sensor can be placed outside any danger zone

- No blind zone - detection from a range of 0 mm

Optical data	
Limit range	0 … 25 m[1]
Operating range	0 … 20 m[1]
Type of light	Laser, red, 655 mm
Light spot size	See diagram
Laser Class (DIN EN 60825-1:2008-5)	1
Polarising filter	Yes

Functions		
Indicator LED, green	Operating voltage indicator	
Indicator LED, yellow	Switching output indicator / contamination indicator	
Sensitivity adjustment	Via Teach-in button and control input	
Teach-in modes	Mode 1: during running process Mode 2: during standing process	
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input	
Default settings	Max. range and N.O.	

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	See Selection Table
Response time	See Selection Table
Control input, IN	$+U_B$ = teach-in -U_B = button locked Open = normal operation

Mechanical data	
Dimensions	50 × 50.08 × 23 mm[3]
Enclosure rating	IP 69K & IP 67[3]
Material, housing	PC-ABS
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C
Ambient temperature: storage	-20 … +80 °C
Weight (plug device)	35 g
Vibration and impact resistance	EN 60947-5-2

Through-beam photoelectric sensor – stainless steel housing

CE
IP 69k
ECOLAB

PRODUCT HIGHLIGHTS

- Stable stainless steel housing – ideal for use in hygiene zones, e.g. in the food and beverages industries
- Housing concept designed for intensive cleaning processes
- Sensor adjustment via teach-in and control input
- Simple alignment thanks to easily visible light spot and alignment indicator

Optical data		Functions	
Limit range	0 … 20 m	Indicator LED, green	Operating voltage indicator
Operating range	0 … 15 m	Indicator LED, yellow	Switching output indicator / contamination indicator
Type of light	LED, red, 640 nm	Indicator LED, red (receiver)	Alignment indicator
Light spot size	See diagram	Sensitivity adjustment (receiver)	Via Teach-in button and control input
		Teach-in modes	Mode 1: during running process Mode 2: during standing process
		Adjustment possibilities (receiver)	N.O./N.C. via Teach-in button and control input Button lock via control input
		Default settings	Max. range and N.O.

Electrical data		Mechanical data	
Operating voltage, $+U_B$	10 … 30 V DC[1]	Dimensions	$52 \times 50.07 \times 23$ mm[3]
No-load current, I_0	≤ 30 mA	Enclosure rating	IP 69K & IP 67[2]
Output current, Ie	≤ 100 mA	Material, housing	Stainless steel, 316L
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)	Material, front screen	PMMA
Power On Delay	< 300 ms	Type of connection	See Selection Table
Switching output, Q	PNP/NPN (see Selection Table)	Ambient temperature: operation	-20 … +60 °C
Output function	N.O./N.C.	Ambient temperature: storage	-20 … +80 °C

F 20 – photoelectric sensors and proximity sensors in miniature housings

The well-proven sensor series

■■■ made in Germany

Of all SensoPart's sensor series, the F 20 is the one with the largest range of variants – so that it contains the right sensor for almost every application. F 20 sensors are therefore found in numerous sectors, for example in the automotive industry, in mechanical engineering, in the electronics and beverages industries, as well as in packaging machines and in the print and paper industries.

The applications of the F 20 series range from positioning tasks to the detection of transparent objects and the smallest of parts: the FR 20-RLO photoelectric proximity sensor reliably detects parts from a size of 0.2 mm. Thanks to its autocollimation principle, it covers the entire range without a blind zone and even "sees" through the smallest drilled holes or apertures.

Not only is the variety offered by the F 20 series impressive, but also its uncompromising industrial suitability. Every sensor is serially equipped with a robust metal plug, well thought-out mounting accessories, and simple adjustment via teach-in or via the control input – because it is often these details that decide on the suitability of a sensor in everyday operation.

TYPICAL F 20

- Largest choice of variants for numerous requirements
- Compact miniature housings for extremely limited mounting conditions
- Detection of transparent objects of any shape
- Most accurate small-part detection throughout the entire range from 0 mm
- Reliable suppression of highly reflective machine parts
- Laser, LED or infrared transmitter options, with teach-in or fixed settings
- User-friendly commissioning via electronic Teach-in button or control line
- Well thought-out mounting accessories for rapid and simple integration
- UL-certification

12 mm   20 mm

32 mm

Compact and robust:
With its miniature housing, the F 20 is suitable for almost all applications. All sensors in this series are equipped with metal plugs so they are very tough and long-lived.

F 20 – Product Overview

	Type of light	Adjustment	Scanning distance / range	Special features	Page
Photoelectric proximity sensors with background suppression					
FT 20 RLH	Laser ⚠	Teach-in	60 mm		316
FT 20 RLHD	Laser ⚠	Teach-in	110 mm	Long scanning distance	318
FT 20 RH	LED	Teach-in	100 mm		320
FT 20 IH	Infrared	Teach-in	150 mm		322
FT 23 RF	LED	Fixed focus	60 / 80 mm		324
Photoelectric proximity sensors					
FT 20 RL	Laser ⚠	Teach-in	150 mm		326
FT 20 R	LED	Teach-in	300 mm		328
FT 23 R	LED	Fixed setting	300 mm		330
Retroreflective photoelectric sensors					
FR 20 RG1	LED	Teach-in	0.5 m	For transparent objects, using autocollimation principle	332
FR 20 RG	LED	Teach-in	0.5 m	For transparent objects	334
FR 20 RLO	Laser ⚠	Teach-in	4 m	Very accurate object positioning, no blind zone	336
FR 20 RL	Laser ⚠	Teach-in	3 m	Very accurate object positioning	338
FR 20 R	LED	Teach-in	2.5 m		340
FR 20 RD	LED	Teach-in	3.5 m		342
FR 23 R	LED	Fixed setting	2.5 m		344
Through-beam photoelectric sensors					
FS/FE 20 R	LED	Teach-in	8 m		346
FS/FE 23 R	LED	Fixed setting	4 m		348

FT 20 RLH

Laser photoelectric proximity sensor with background suppression

PRODUCT HIGHLIGHTS

- Detection of the smallest parts
- Precise background suppression
- Laser Protection Class 1
- Sensor adjustment via teach-in and control input
- Compact miniature housing

Optical data		Functions	
Scanning distance	20 … 60 mm[1]	Indicator LED, green	Operating voltage indicator / contamination indicator
Type of light	Laser, red, 650 nm	Indicator LED, yellow	Switching output indicator / contamination indicator
Light spot size	See table		
Laser Class (DIN EN 60825-1:2008-5)	1	Scanning distance adjustment	Via Teach-in button and control input
		Teach-in modes	Mode 1: during running operation Mode 2: during standing process
		Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
		Default settings	Max. scanning distance and N.O.

Electrical data		Mechanical data	
Operating voltage, $+U_B$	10 … 30 V DC	Dimensions	32 × 20 × 12 mm[3]
No-load current, I_0	≤ 30 mA	Enclosure rating	IP 67[3]
Output current, Ie	≤ 100 mA	Material, housing	ABS
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)	Material, front screen	PMMA
		Type of connection	See Selection Table
Protection Class	2	Ambient temperature: operation	-20 … +60 °C
Power On Delay	≤ 300 ms	Ambient temperature: storage	-20 … +80 °C
Switching output, Q	PNP/NPN (see Selection Table)	Weight (plug device)	10 g
Output function	N.O./N.C.	Weight (cable device)	40 g
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz	Vibration and impact resistance	EN 60947-5-2
Response time	500 µs		
Control input, IN[2]	$+U_B$ = teach-in -U_B = button locked Open = normal operation		

[1] Reference material: grey, 18 % reflectivity   [2] Only 4-pin design   [3] With connected IP 67 plug

Scanning distance	Switching output	Type of connection	Part number	Article number
20 … 60 mm	PNP	Metal plug, M8×1, 3-pin	FT 20 RLH-PSM3	551-11019

## Diffuse photoelectric proximity sensor

PRODUCT HIGHLIGHTS

- Sensor adjustment via teach-in and control input
- Simple alignment thanks to easily visible light spot
- Compact miniature housing
- Large range of variants

Optical data	
Scanning distance	20 … 300 mm[1]
Type of light	LED, red, 660 nm
Light spot size[2]	12 × 12 mm[2]

Functions	
Indicator LED, green	Operating voltage indicator / contamination indicator
Indicator LED, yellow	Switching output indicator / contamination indicator
Sensitivity adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running operation Mode 2: during standing process
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. scanning distance and N.O.

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC
No-load current, I_0	≤ 25 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN[3]	$+U_B$ = teach-in $-U_B$ = button locked Open = normal operation

FR 20 RG1

Retroreflective photoelectric sensor for detecting transparent objects, autocollimation
CE

IP 67

c(UL)us LISTED

PRODUCT HIGHLIGHTS

- Autocollimation principle for reliable detection of transparent objects of any shape
- Particularly suitable for detecting bottles, ampoules, blisters and transparent foils
- Minimal blind zone thanks to autocollimation
- Temperature compensation for reliable switching over the entire temperature range

Optical data	
Operating range	5 … 500 mm[1]
Type of light	LED, red, 660 nm

FR 20 RLO

Laser retroreflective photoelectric sensor, autocollimation

PRODUCT HIGHLIGHTS

- Most accurate small-part detection of tenphs of a mm
- Autocollimation – transmitter and receiver on a single axis
- Suitable for numerous, highly varied, reflectors and reflective tapes
- Highly accurate even at long ranges of up to 4 m

Optical data

Operating range	0 … 4 m[1]
Type of light	Laser, red, 650 nm
Laser Class (DIN EN 60825-1:2008-5)	1
Light spot size[2]	Ø 2 mm

Functions

Indicator LED, green	Operating voltage indicator / contamination indicator
Indicator LED, yellow	Switching output indicator / contamination indicator
Sensitivity adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running operation Mode 2: during standing process
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. range and N.O.

Electrical data

Operating voltage, $+U_B$	10 … 30 V DC

Retroreflective photoelectric sensor

PRODUCT HIGHLIGHTS

- Simple alignment thanks to easily visible light spot
- Sensor adjustment via teach-in and control input
- Suitable for numerous, highly varied, reflectors and reflective tapes
- Compact miniature housing

Optical data	
Limit range	4 m[1]
Operating range	0.05 … 3.5 m[1]
Type of light	LED, red, 660 nm
Light spot size[2]	75 × 75 mm[2]

Functions	
Indicator LED, green	Operating voltage indicator / contamination indicator
Indicator LED, yellow	Switching output indicator / contamination indicator
Sensitivity adjustment	Via Teach-in button and control input
Teach-in modes	Mode 1: during running operation Mode 2: during standing process
Adjustment possibilities	N.O./N.C. via Teach-in button and control input Button lock via control input
Default settings	Max. range and N.O.

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC
No-load current, I_0	≤ 25 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Control input, IN	$+U_B$ = teach-in $-U_B$ = button locked Open = normal operation

Mechanical data	
Dimensions	32 × 20 × 12 mm[3]
Enclosure rating	IP 67[3]
Material, housing	ABS
Material, front screen	PMMA
Type of connection	See Selection Table

F 50 – photoelectric sensors and proximity sensors in compact housings

The reliable standard series

🟥⬛🟨 made in Germany

Well thought-out mounting accessories: SensoPart offers the right mounting aid for almost every mounting situation. This considerably simplifies sensor installation and adjustment. Designs with a supplementary protective function are also available.

TYPICAL F 50

- Universal use in numerous automation applications
- Autocollimation variants with high precision and no blind zone
- Precise background suppression
- Laser, LED or infrared light transmitter options
- Simple adjustment via potentiometer, with numeric display
- Rotatable plug (270°)
- Well thought-out mounting accessories
- UL-certification

The photoelectric sensors and photoelectric proximity sensors of the F 50 series are virtually synonymous with versatile use and particularly reliable products. They have guaranteed user-satisfaction in a wide variety of sectors from the automotive industry, through mechanical engineering and wood processing, to the packaging and print industries.

The F 50 sensors' reliable detection (with laser-light, red-light or infrared LED options) and precise background suppression are impressive. Automation tasks such as (small) part detection, checking presence and positioning are their usual areas of use. SensoPart also offers product variants for special applications: for example, the FR 50-R / RL autocollimation photoelectric sensor that can detect objects from a range of 0 mm.

The sensors of the F 50 series, however, not only offer very reliable operation, but also make users' lives easy. Thus mounting is considerably simplified by the connection plug that can be rotated through 270° and the well thought-out mounting accessories, while adjustment and commissioning are also easy and user-friendly thanks to the direct numeric display. You simply cannot go wrong with an F 50 device!

FT 50 RLH

## Laser photoelectric proximity sensor with background suppression

PRODUCT HIGHLIGHTS

- Particularly suitable for detecting the smallest of objects
- Precisely adjustable background suppression
- Simple scanning distance adjustment thanks to indicator scale
- High switching frequency of 2500 Hz

Optical data

Scanning distance	30 … 150 mm[1]
Type of light	Laser, red, 650 nm
Light spot size	See table
Laser Class (DIN EN 60825-1:2008-5)	2
Hysteresis[2]	< 5 %

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Indicator LED, red	Contamination indicator
Scanning distance adjustment	Via potentiometer

Electrical data

Operating voltage, $+U_B$	10 … 30 V DC[3]
No-load current, I_0	≤ 50 mA[4]
Output current, Ie	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	PNP/NPN, antivalent (see Selection Table)
Output function	N.O./N.C. (see Selection Table)
Switching frequency, f (ti/tp 1:1)	≤ 2500 Hz
Response time	200 µs
Connection, BK	N.O.
Connection, WH[5]	N.C.
Contamination output, WH (optional)	N.O. (see Selection Table)

Mechanical data

Dimensions	50 × 50 × 17 mm[3]
Enclosure rating	IP 67[6]
Material, housing	ABS
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +45 °C
Ambient temperature: storage	-20 … +80 °C
Weight (plug device)	40 g
Weight (cable device)	130 g
Vibration and impact resistance	EN 60947-5-2

[1] Reference material: grey, 18 % reflectivity   [2] 18 % / 18 %   [3] Max. 10 % ripple, within U_B [4] At 24 V DC   [5] Without contamination output   [6] With connected IP 67 plug

FT 50 RH

Photoelectric proximity sensor with background suppression

CE

IP 67

c (UL) us
LISTED

PRODUCT HIGHLIGHTS
- Precisely adjustable background suppression
- Simple scanning distance adjustment thanks to indicator scale
- Optional contamination output
- Plug connector rotatable

Optical data

Scanning distance	30 … 300 mm[1]
Type of light	LED, red, 660 nm
Light spot size[2]	8 × 8 mm[2]

Functions

Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Indicator LED, red	Contamination indicator
Scanning distance adjustment	Via potentiometer

Electrical data

Operating voltage, $+U_B$	10 … 30 V DC[3]
No-load current, I_0	≤ 35 mA[4]
Output current, Ie	≤ 200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	PNP/NPN, antivalent (see Selection Table)
Output function	N.O./N.C. (see Selection Table)
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs
Connection, BK	N.O.
Connection, WH[5]	N.C.
Contamination output, WH (optional)	N.O. (see Selection Table)

Mechanical data

Dimensions	50 × 50 × 17 mm[3]
Enclosure rating	IP 67[6]
Material, housing	ABS
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C
Ambient temperature: storage	-20 … +80 °C
Weight (plug device)	40 g
Weight (cable device)	130 g
Vibration and impact resistance	EN 60947-5-2

[1] Reference material: grey, 18 % reflectivity   [2] At scanning distance of 200 mm   [3] Max. 10 % ripple, within U_B [4] At 24 V DC   [5] Without contamination output
[6] With connected IP 67 plug

Scanning distance	Switching output	Type of connection	Contamination output	Part number	Article number

F 88 – family of photoelectric sensors for harsh environmental conditions

The strong and solid series

■ made in Germany

TYPICAL F 88

- Very long ranges and scanning distances
- PNP or NPN variants with 2 switching outputs or relay with time function
- AC/DC devices with clamping space
- Simple adjustment via potentiometer
- Robust plastic housings
- Additional dovetail slot for simple mounting
- Well thought-out mounting accessories
- UL-certification

Above all else, the sensors of the F 88 series are robust and dependable! Their high system reserves guarantee reliable detection even in critical industrial environments. An F 88 fears neither dust and dirt nor vibrations, and the stable housing/plug unit is designed for these conditions.

The high-level light performance can be seen in the generously proportioned detection ranges: the FT 88 scanner with background suppression even "sees" objects at a distance of 700 mm, while the FS/FE 88 through-beam photoelectric sensor manages a range of 65 m. With these performance data, the F 88 series can be used in many demanding applications in sectors such as the automotive industry, wood processing or in mechanical engineering.

The robust sensors are also ideally suited for heavy industry as well as for protecting gates and doors.

The sensors of the F 88 series are also generously proportioned when it comes to signal outputs: they have two switching outputs (PNP or NPN), and a variant with relay output and time function is also available. The right output is therefore available for every supply voltage and the sensor offers flexible adaptation to operating conditions. User-friendly sensor mounting – with dovetail slot and well thought-out mounting accessories – is also typical SensoPart. There is thus something for almost every user requirement!

FT 88-RH

Photoelectric proximity sensor with background suppression

PRODUCT HIGHLIGHTS

- Long scanning distance of 700 mm
- Precise background suppression
- Antivalent switching output

Optical data		Functions	
Scanning distance	20 … 700 mm[1]	Indicator LED, yellow	Switching output indicator
Type of light	LED, red, 660 nm	Scanning distance adjustment	Via potentiometer
Light spot size[2]	Ø 15 mm	Default setting	Max. scanning distance

Electrical data		Mechanical data	
Operating voltage, $+U_B$	10 … 30 V DC[3]	Dimensions	88 × 54.3 × 25.8 mm[3]
No-load current, I_0	≤ 40 mA	Enclosure rating	IP 67[4]
Output current, le	≤ 200 mA	Material, housing	ABS
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)	Material, front screen	PMMA
		Type of connection	See Selection Table
Protection Class	2	Ambient temperature: operation	-40 … +60 °C
Power On Delay	≤ 300 ms	Ambient temperature: storage	-40 … +75 °C
Switching output, Q	PNP/NPN antivalent (see Selection Table)	Weight (plug device)	70 g
		Vibration and impact resistance	EN 60947-5-2
Output function	N.O./N.C.		
Switching frequency, f (ti/tp 1:1)	≤ 250 Hz		
Response time	2 ms		
Connection, BK	N.O.		
Connection, WH	N.C.

Photoelectric proximity sensor with background suppression, relay output

CE
IP 67
c UL us LISTED

PRODUCT HIGHLIGHTS

- Long scanning distance of 700 mm
- Precise background suppression
- Relay output
- Adjustable time function
- N.O. / N.C. switchable

Optical data		Functions	
Scanning distance	20 … 700 mm[1]	Indicator LED, yellow	Switching output indicator
Type of light	LED, red, 660 nm	Sensitivity adjustment	Via potentiometer
Light spot size[2]	Ø 15 mm	Adjustment possibilities	Time and output function (N.O./N.C.) via operating elements in clamping space
		Default setting	Max. scanning distance

Electrical data		Mechanical data	
Operating voltage, ~U_B	12 … 240 V AC / DC	Dimensions	88 × 65.5 × 25.8 mm[3]
Power consumption	≤ 3.5 VA	Enclosure rating	IP 67[4]
Output current, Ie	≤ 2 A (≤ 250 V AC/DC)	Material, housing	ABS
Protection Class	2[3]	Material, front screen	PMMA
Power On Delay	≤ 300 ms	Type of connection	See Selection Table
Switching output, Q	Relay	Ambient temperature: operation	-25 … +60 °C
Output function	Change-over contact (N.O./N.C.)	Ambient temperature: storage	-40 … +75 °C
Switching frequency, f (ti/tp 1:1)	≤ 25 Hz	Weight (clamping space device)	120 g
		Vibration and impact resistance	EN 60947-5-2

[1] Reference material: grey, 18 % reflectivity   [2] At scanning distance of 700 mm   [3] With closed clamping space   [4] With connected IP 67 plug

Scanning distance	Switching output	Type of connection	Part number	Article number

Infrared photoelectric proximity sensor with background suppression

PRODUCT HIGHLIGHTS

- Long scanning distance of 2000 mm
- Precise background suppression
- Antivalent switching output

Optical data		Functions	
Scanning distance	20 … 2000 mm[1]	Indicator LED, yellow	Switching output indicator
Type of light	LED, infrared, 880 nm	Scanning distance adjustment	Via potentiometer
Light spot size[2]	Ø 70 mm	Default setting	Max. scanning distance

Electrical data		Mechanical data	
Operating voltage, $+U_B$	10 … 30 V DC[3]	Dimensions	88 × 54.3 × 25.8 mm[3]
No-load current, I_0	≤ 40 mA	Enclosure rating	IP 67[4]
Output current, Ie	≤ 200 mA	Material, housing	ABS
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)	Material, front screen	PMMA
		Type of connection	See Selection Table
Protection Class	2	Ambient temperature: operation	-40 … +60 °C
Power On Delay	≤ 300 ms	Ambient temperature: storage	-40 … +75 °C
Switching output, Q	PNP/NPN antivalent (see Selection Table)	Weight (plug device)	70 g
		Vibration and impact resistance	EN 60947-5-2
Output function	N.O./N.C.		
Switching frequency, f (ti/tp 1:1)	≤ 250 Hz		
Response time	2 ms		
Connection, BK	N.O.		
Connection, WH	N.C.

FT 92 – proximity switch with long scanning distance

The far-sighted sensor with pulse time-of-flight measurement

■■■ made in Germany

TYPICAL FT 92

- Very long range
- Precise background suppression with time-of-flight technology
- User-friendly fine adjustment of sensor with pilot laser
- Rapid and easy adjustment via teach-in
- Safe operation thanks to Laser Class 1
- Robust housing/plug unit
- Well thought-out mounting accessories
- UL-certification

The FT 92 proximity switch has been specially designed for detection tasks with long distances to the process: the sensor, equipped with an infrared laser (Laser Class 1) reaches ranges of up to 6 m. Whereby its measurement principle of infrared pulse time-of-flight technology guarantees particularly precise background suppression, and thus reliable detection even against highly reflective or glossy backgrounds – as well as absolute immunity to ambient light.

Long distances not only require excellent optical performance, but also helpful functions for installation and commissioning. Thus a pilot laser that can be switched off simplifies fine adjustment of the sensor, and the wide variety of mounting options provides users with rapid and user-friendly installation.

The FT 92 is suitable for numerous applications in industrial automation, e.g. for small-part detection, for checking presence or for positioning tasks. The far-sighted sensor can therefore be found in many sectors: in the automotive industry and in mechanical engineering, in the wood-processing industry, in packaging machines or in the control of gates and doors. Its stable and robust design ensures smooth, trouble-free operation everywhere – as well as satisfied users!

FT 92 IL

Infrared photoelectric proximity sensor with background suppression
PRODUCT HIGHLIGHTS

- Long range of 6 m
- Precise background suppression through time-of-flight technology
- Reliable operation even with highly reflective and glossy backgrounds
- Simple alignment via integrated pilot laser

Optical data		Functions	
Scanning distance	0.2 … 6 m[1]	Indicator LED, green	Operating voltage indicator
Type of light, measurement laser	Infrared, 905 nm	Indicator LED, yellow	Switching output indicator
Laser Class, measurement laser (DIN EN 60825-1:2008-5)	1	Indicator LED, orange	Operating mode indicator (Fast / Slow)
Type of light, pilot laser	Laser, red, 650 nm	Scanning distance adjustment	Via Teach-in button
Laser Class, pilot laser (DIN EN 60825-1:2008-5)	2	Adjustment possibilities	Switching point set via Teach-in button Switching window set via Teach-in button Slow / Fast mode via Teach-in button N.O./N.C. via Teach-in button Pilot laser via Teach-in button
Repeatability, Fast / Slow	$\leq \pm$ 15 mm / 10 mm		
		Default settings	Sn = 5.8 m and N.O.

Electrical data		Mechanical data	
Operating voltage, $+U_B$	18 … 30 V DC[2]	Dimensions	95 × 93 × 42 mm[3]
No-load current, I_0	$\leq$ 125 mA	Enclosure rating	IP 67[3]
Output current, le	100 mA	Material, housing	ABS
Voltage drop, U_D	$\leq$ 2.4 V	Material, front screen	PMMA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)	Type of connection	See Selection Table
		Ambient temperature: operation	-20 … +50 °C
Protection Class	2	Ambient temperature: storage	-40 … +80 °C
Power On Delay	< 300 ms	Weight (plug device)	200 g
Switching output, Q	PNP/NPN (see Selection Table)	Weight (cable device)	270 g
Output function	N.O./N.C.	Vibration and impact resistance	EN 60947-5-2
Response time, Fast / Slow	13 / 80 ms

F 04/05/12/18/30 – photoelectric sensors and proximity sensors in cylindrical housings

All-round performance

■■■ made in Germany

Sensors in cylindrical housings have several special aspects compared to those with cubic housings. They are not only particularly robust but also, thanks to their integrated thread, offer easy and space-saving installation. Special designs that can "see around corners" are also available: they are equipped with a special optical system that deflects the transmission and reception beams around the sensor axis by 90°, expanding the mounting options available.

The sensors of the F 04/05/12/18/30 series differ in the diameter of the integrated metal threaded sleeve (4, 5, 12, 18 or 30 mm). Each series offers the usual functional variants: through-beam and retroreflective photoelectric sensors, energetic scanners, and scanners with background suppression. The sensors are optionally available with red-light or infrared LED or with pulsed red-light laser. Variants with potentiometer or teach-in operation are also available.

TYPICAL F 04/05/12/18/30

- Robust housings
- Very easy installation
- Straight or angled optics options
- Metric threads in 5 sizes: 4, 5, 12, 18 or 30 mm
- Red-light / infrared LED or laser light options
- FMF 18 for detection of liquid limit levels

F 04/05/12/18/30 – Product Overview

PRODUCT HIGHLIGHTS

- Economical solution for numerous applications
- Scanning distance of up to 800 mm, adjustable via potentiometer
- Red light or infrared
- Variants with angled light exit
- Robust plastic housings (IP 67)
- Simple adjustment via potentiometer
- 2 through holes as additional mounting possibility

Optical data			
Scanning distance	See Selection Table		
Type of light	See Selection Table		

Functions			
Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Sensitivity adjustment	Via potentiometer
Adjustment possibilities	N.O./N.C. via control input (IN)
Default settings	Max. scanning distance and N.O.

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC
No-load current, I_0	≤ 30 mA
Output current, le	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C. / $-U_B$ = N.O. / $+U_B$ = N.C.
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	≤ 1 ms

Mechanical data	
Dimensions	M18 x 44 mm
Enclosure rating	IP 67[1]
Material, housing	ABS
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-25 … +55 °C
Weight (plug device)	11 g[2] / 13 g[3]
Weight (cable device)	55 g[2] / 57g[3]

PRODUCT HIGHLIGHTS

- Scanning distance: 5 … 400 mm, adjustable
- Wide beam (large aperture angle)
- Separating seam
- Metal M18 threaded sleeve
- Contamination indicator

Optical data	
Scanning distance	5 … 400 mm[1]
Type of light	Infrared, 880 nm
Distance hysteresis	≤ 10 % of set scanning distance
Aperture angle	25°

Functions		
Indicator LED, green		Operating voltage indicator
Indicator LED, yellow		Switching output indicator
Indicator LED, red		Contamination indicator
Sensitivity adjustment		Via 18-step potentiometer
Default setting		Max. scanning distance

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[2]
No-load current, I_0	≤ 25 mA
Output current, Ie	≤ 200 mA
Pull-up resistance	22 kΩ
Pull-down resistance	22 kΩ
Photective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	See Selection Table
Output function	See Selection Table
Switching frequency, f (ti/tp 1:1)	≤ 1000 Hz
Response time	500 µs

Mechanical data	
Dimensions	M18 x 73 mm
Enclosure rating	IP 65[3]
Material, housing	Brass, nickel-plated
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C
Ambient temperature: storage	-40 … +80 °C
Weight (plug device)	65 g
Weight (receiver device)	165 g
Vibration and impact resistance	EN 60947-5-2

[1] Reference material: Kodak white, 90 % reflectivity   [2] 10 % ripple, within U_B [3] With connected IP 65 plug

FS/FE 12 RL

Laser through-beam photoelectric sensor

CE

IP 67

PRODUCT HIGHLIGHTS

- Fine, parallel light beam

- Small part detection to 0.2 mm at a max. distance of 1 m

- Simple installation thanks to standard M12 metal thread

- Control line for setting of 3 sensitivity levels

- Test input

Optical data	
Range	0 … 5 m
Type of light	Laser, red, 650 nm
Laser Class (DIN EN 60825-1:2008-5)	2

Functions		
Indicator LED, yellow	Switching state indicator
Sensitivity adjustment	Via control line

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC
No-load current, I_0	≤ 30 mA
Output current, Ie	≤ 100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection
Protection Class	2
Power On Delay	≤ 300 ms
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O./N.C.
Switching frequency, f (ti/tp 1:1)	10 kHz
Control input, Test, transmitter	$-U_B$: transmitter = off $+U_B$ or Open: transmitter = on
Control input, Gain, receiver[1]	1 Open= medium sensitivity 2 $-U_B$ = high sensitivity 3 $+U_B$ = low sensitivity

Mechanical data	
Dimensions	M12 x 58 mm
Enclosure rating	IP 67[2]
Material, housing	Brass, nickel-plated
Material, front screen	PMMA
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C
Ambient temperature: storage	-20 … +80 °C
Weight (transmitter / receiver)	30 g

[1] Change in Gain setting is only effective after renewed switch on / switch off   [2] With connected IP 67 plug

Fibre-optic sensors and cables

Fibre-optic sensors and fibre-optic cables for a wide range of applications

FL 20
from Page 434

- *Fibre-optic sensor in miniature housing for installation in restricted spaces*
- *Simple and reliable mounting of fibre-optic cables via clamping bracket*

FL 70
from Page 438

- *High-end fibre-optic sensor with 4-digit display*
- *Cuboid housing for DIN-rail mounting*
- *PNP, NPN or analogue output options*
- *Communication prevents mutual interference*

FMS 18 / FMS 30 / FSG 30
from Page 444

- *Fibre-optic sensors in robust full-metal housings for harsh operating conditions*
- *Large selection of robust fibre-optic cables*
- *PNP, NPN or analogue output options*

Fibre-optic cables – standard
from Page 454

- *Wide range of photoelectric sensor and proximity sensor variants*
- *Fibre-optic cables with lateral light exit for restricted spaces*
- *Proximity sensors and through-beam photoelectric sensors with long ranges*
- *Robust fibre and sheath materials for harsh operating conditions*

Fibre-optic cable systems from SensoPart are the solution when installation space is restricted or operating conditions are hot or dirty. Robust sheath and fibre materials in the fibre-optic cable also offer excellent protection against aggressive chemicals. The sensors are protected in a switching cabinet or at a safe distance, while the fibre-optic cable heads are mounted in the immediate vicinity of the target objects. The large selection of different cable heads opens up numerous application possibilities for our customers as well as providing a high level of flexibility regarding mounting.

Some fibre-optic cable systems from SensoPart cover the same applications as conventional optical sensors. Depending on the customer's application, they are available as photoelectric sensors or proximity sensors. Whereby the powerful fibre-optic sensors ensure high levels of functionality and reliability.

High flexibility and low weight on the gripper of a robot, aggressive detergents in the pharmaceutical or food industries, red-hot objects, minimal light spot dimensions for the detection of small parts, strip edge control, or the detection of liquids and levels in pipes and vessels – high-quality fibre-optic cable systems from SensoPart are predestined for use in all these applications.

Applications in which differing detection tasks have to be carried out in the smallest of spaces often pose the risk of mutual interference. This can lead to unwanted spurious switching. No problem for the FL 70 series: it has a communication interface that ensures that several FL 70 sensors can be synchronised and always switch correctly. The communication takes place fully automatically after battery installation, without any additional adjustment effort for customers. In other words, extremely simple installation and precise detection in the smallest of spaces.

Fibre-optic cables – focused optics

from Page 498

- *Precise, small light spot for small-part detection*
- *Adjustable scanning distance and light spot size*

Fibre-optic cables – light strips

from Page 504

- *Photoelectric sensor and proximity sensor variants*
- *Variety of light strip widths and ranges*

Fibre-optic cables – special

- *Fibre-optic cable by the metre*
- *Ancillary lenses for extending ranges*
- *Cutting tool for shortening and bending fibre-optic cables*

9

TYPICAL SENSOPART

- Sub-miniature FL 20 housing for simple integration in machines

- Powerful & variable FL 70 fibre-optic cable sensors

- FMS/FSG series: powerful sensors for extreme demands

- Wide range of fibre-optic cables for standard applications or individual customer requirements

- Numerous adjustment possibilities: stable or dynamic teach-in, external control line, accuracy and speed adjustment, timing functions

- Intelligent fibre-optic sensor and cable mounting solutions for easy installation and adjustment

- Reliable operation without mutual interference thanks to communication between FL 70 devices

Fibre-optic cable sensors

System description

How fibre-optic cables function

Light guidance is based on the physical effect of total reflection, whereby light coupled into a glass fibre is repeatedly reflected back into the glass fibre from the boundary surface. The major advantage of this technology is that the light can be transported over long distances with almost no loss.

Fibre-optic sensors use this principle to bring the transmitted light to an inaccessible location and take up the reflected light again to return it to the sensor, mounted where more space is available. This technology, which can also be used for the detection of very small objects, is characterised by precision and reliability.
Light guidance in fibre-optic cable
The light is transported in the fibre-optic cable in an axial direction as a result of total reflection at the boundary surface between the sheath (2) and the core (1). The size of the limit angle of the total reflection (α_G) defines the acceptance angle of the fibre-optic cable (θ_{max}). Light hitting the face of the fibre at this or a smaller angle is transported in the fibre-optic cable.

Fibre-optic cable materials

Fibre-optic cables differ in the transmission material used – glass or plastic. SensoPart offers the so-called fibre material in both variants. Glass fibres are highly resistant to chemicals and high temperatures. Suitable metal or silicone sheath materials allow the use of glass fibres in harsh environmental and process conditions. Larger glass-fibre cross-sections offer high functional reserves and reliability, even in dusty and dirty environments.

Fibre-optic cables as through-beam photoelectric sensors

The transmission and receiver fibre-optic cables of through-beam photoelectric sensors run in two separate fibre-optic cables. Both fibre-optic cables are optically connected to the sensor via a coupling. Whereby one fibre-optic cable transports the transmission light from the sensor to the detection location while the other, opposite, fibre-optic cable transports the light back to the receiver. The sensor switches if the light path between the two facing fibre-optic cable heads is interrupted by an object. Relatively long ranges are achieved with through-beam photoelectric sensors.

The photoelectric sensor type
Transmitter cables and receiver cables are laid in two separate sheaths and are connected to the appropriate optical component of the sensor via a coupling.

The fibre-optic cable as photoelectric proximity sensor

In the photoelectric proximity sensor variant, the transmitter and receiver cables are combined in one light exit sheath. While one of the fibre-optic cable strands is connected with the transmitter, the other strand transports the light reflected from the target object back to the sensor's receiver. The sensor switches.

The advantages of this cable arrangement lie in the very low space requirement and reduced mounting effort. The fibre-optic cable heads must be brought close to the target object because of the detection principle used. Expanded ranges can be achieved by using larger glass-fibre cross-sections.

Parallel vs. coaxial fibres

In the case of scanner fibre-optic cables, one also differentiates between two different fibre arrangements. In the standard design, the transmitter and receiver fibres run parallel, in coaxial fibre-optic cables the receiver fibres are arranged concentrically around the transmission fibres. When using supplementary optics for focusing (c.f. P. 498) the coaxial design offers application advantages, namely a smaller light spot, in particular, and thus improved small-part detection.
The photoelectric proximity sensor type
In photoelectric proximity sensor versions the transmission and receiver fibres are combined in a single cable and disgorge in a light exit sleeve.

The fibre-optic cable head – numerous different tips

Compact designs of machines and plant with extremely restricted spaces – access to the target objects is often difficult. But the heads of the fibre-optic cables are as varied as the tasks. Particularly fine or bendable fibre-optic cable heads and highly flexible fibre-optic cables provide access in these situations. Fibre-optic cable heads with a lateral light exit that deflect the light by 90° in the smallest of spaces provide assistance in restricted or blocked spaces, in particular. The use of fibre-optic cables together with appropriate cable heads provides flexibility with moving machine parts, low weight, and high impact and vibration resistance – ensuring trouble-free and reliable function.

9

FL 20 – sensor for plastic fibre-optic cable adaptation

Small, compact amplifier

■ made in Germany

Fibre assembly / mounting
- *Simple exchange of the fibre-optic cables even in mounted state*
- *No tool necessary*
- *Secure clamping:*
  1. *Open clamping bracket*
  2. *Feed fibre-optic cables into the holder until you reach the stop (get past the resistance from the O-ring)*
  3. *Close clamping bracket*

TYPICAL FL 20

- Miniature housing 32 × 20 × 12 mm^3 for simple integration in machines
- Teach-in with button or control input
- Dynamic adjustment possible
- High switching frequency
- Red light, 660 nm
- N.O./N.C. switchable
- For fibre-optic cables with diameter of 2.2 mm
- Wide range of adaptable fibre-optic cables

The FL 20 fibre-optic sensor impresses with its small dimensions and convincing performance data. It covers all the requirements of opto-sensors under restricted space conditions and offers highly precise detection with simple handling.

Simple adjustment via teach-in or the control input and its robust metal plug design confirm the uncompromising industrial suitability of the FL 20 fibre-optic sensor.

A broad portfolio of fibre-optic cables with differing heads and a variety of sheath materials solves all tasks precisely and reliably.

PRODUCT HIGHLIGHTS

- Simple teach-in via button
- Control line for teach-in and button lock
- Contamination indicator
- N.O./N.C. switchable
- For fibre-optic cables with diameter of 2.2 mm

Optical data			
Scanning distance	Dependant on fibre-optic cable (scanner)[1]		
Operating range	Dependant on fibre-optic cable (cabinet)		
Type of light	LED, red, 660 nm		
Distance hysteresis	< 10 % of set scanning distance		

Functions			
Indicator LED, green	Stability indicator
Indicator LED, yellow	Light reception indicator
Sensor adjustment[2]	Via Teach-in button and control input
Adjustment possibilities	Button lock via control input
Default setting	N.O.

Functions		
Operating voltage, +U_B	10 … 30 V DC
Current consumption without load	≤ 25 mA
Output current, Ie	100 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Switching output, Q	PNP/NPN (see Selection Table)
Output function	N.O.
Switching frequency, f (ti/tp 1:1)	1000 Hz
Control input, IN: (only 4-pin version)	+U_B = teach-in -U_B = button locked Open = normal operation

Mechanical data		
Dimensions	32 × 20 × 12 mm[3]
Enclosure rating	IP 67[3]
Material, housing	ABS
Type of connection	See Selection Table
Ambient temperature: operation	-20 … +60 °C
Ambient temperature: storage	-20 … +80 °C
Weight (plug device)	10 g
Weight (cable device)	40 g

[1] Reference material: white, 90 % reflectivity   [2] Only 4-pin version   [3] With suitable fibre-optic cable

Switching output	Type of connection	Part number	Article number
PNP	Plug, M8×1, 4-pin	FL 20 R-PSM4	551-71000
PNP	Cable, 2 m, 4-wire	FL 20 R-PSK4	551-71001

FL 70 – sensors for plastic fibre-optic cable adaptation

Functional DIN-rail devices

🟥🟨⬛ made in Germany

LOC = lock function – reliably secures against deliberate or accidental tampering

ADJ = adjustment – the sensor is in setup mode

SP1 = switching window 1 – window 1 has been taught-in

Monitoring accumulations with fibre-optic cables
Small plastic plugs are fed in on a vibration conveyor and individualised on a conveyor section. The monitoring of accumulations is carried out with an FL 70 R-PSD fibre-optic sensor in combination with SensoPart's K2L-34 plastic fibre-optic cable. The FL 70 R-PSD sensor is installed in a switching cabinet here. This is not strictly necessary because mounting directly on the machine would have been possible thanks to the robust housing and high enclosure rating of IP 64.

TYPICAL FL 70

- Very user-friendly teach-in
- High level of accuracy
- High switching frequency
- No mutual interference thanks to automatic optical communication during battery installation
- DIN-rail mounting
- Robust enclosure rating of IP 64
- Wide range of fibre-optic cables

FL 70 R

The FL 70 R variant manages without a display and is the more economical alternative for standard applications. All variants offer simple operation via teach-in, which is achieved by button or via the teach-in line. The buttons can be locked via the external teach-in line.

FL 70 R-…D

The FL 70 R-…D is the high-end fibre-optic device with a 4-character display. It is characterised by simple setting and many supplementary functions, e.g. fine adjustment of the switching point, inversion of the switching output, accuracy and speed adaptation, window programming, timer functions and reliable tamper-proofing. The display is always easy to read because it can be rotated through 180°.

FL 70 RA-…D

The FL 70 RA-…D has a supplementary analogue output which is a major advantage for complex applications, in particular, such as connecting a so-called cross-section converter. This allows, for example, edge control and inspections on the basis of object size.

FMS 18 / FMS 30 / FSG 30 – sensors for glass fibre adaptation

Robust, strong, reliable

■ made in Germany

Switching of output function and scanning distance
The N.C./N.O. function is set via the sliding switch on the front. The switching position "Sn/2" reduces the scanning distance by 50 % and thus permits improved small-part detection

Uncomplicated adaptation of fibre-optic cable and amplifier
The glass fibres can be adapted by simply screwing them to the FMS sensors (here the FMS 30).

TYPICAL FMS 18 / FMS 30 / FSG 30

- Operating range: scanner max. 800 mm (depending on the fibre-optic cable used)
- Operating range: photoelectric sensor max. 4800 mm (depending on the fibre-optic cable used)
- Robust metal housings
- Antivalent switching output
- N.O./N.C. switchable
- Various sheaths for glass fibres
- Fibre-optic cables for temperatures up to 160°C
- Resolution/scanning distance switchable
- Cross-section converter adaptable

FMS 18

The FMS 18-4 U fibre-optic sensor operates at minimum to medium switching distances and ranges. The device is particularly suitable for reliable non-contact detection in rapid processes as a result of its high switching frequency of 1 kHz. Despite the device's small size, its output signal can be inverted by using a plug-in bridge on the front. The sensor also has two separate outputs: P- and N-switching.

FMS 30

The FMS 30-4 U fibre-optic sensor operates throughout the entire range from low to very long switching distances and ranges. The switching distance can be halved by using the switch on the front of the device. This simplifies accurate adjustment of the switching point at close range and improves small-part detection.

A second switch on the front inverts the output signal. The sensor can thus provide the logically correct signal, i.e. N.O. or N.C. depending on the particular application. Every device also has two separate outputs: P- and N-switching.

FSG 30

The FSG 30-UA fibre-optic sensor is characterised by an extremely high switching frequency of up to 20 kHz. This has been made possible by its reliable and highly precise source of constant light.

Fibre-optic cables – standard

The right variant for every task
Look round the corner

When space is restricted it can be advantageous to use fibre-optic cables with lateral (radial) light exits – available with differing side lengths, depending on the model.

The protective sheath

Variants with a helical metal sheath (MSC devices) usually meet normal demands. For more difficult operating conditions – for example constant mechanical movements and loads or exposure to water spray, oil, coolants or high temperatures – SensoPart offers fibre-optic cables with silicone sheaths (Si devices).

TYPICAL SENSOPART FIBRE-OPTIC CABLES

- Long ranges in combination with appropriate photoelectric sensors and proximity sensors
- Variety of sheath materials, also for harsh operating conditions
- Radial or axial light exit for simple installation, even when space is restricted
- Particularly high light output with glass fibres
- High temperature resistance with glass fibres (up to 160°C)
- Coaxial fibres for precise small-part detection
- Flexible plastic fibre-optic cables with very fine mounting heads
- Variety of mounting possibilities (adapters or heads)

Every task is unique and requires an individual sensor solution. Selection of the correct fibre-optic cable is of decisive importance, particularly with difficult and restricted space conditions. We place particular importance on the careful machining of the fibre material, fibre-optic cable ends and sheaths. This special treatment allows long ranges to be achieved, i.e. a sufficiently high light output reaches the target object, is guided back, and reliably evaluated.

Our fibre-optic cables can be adapted to almost every task thanks to the wide range of cables with differing heads and mounting possibilities – from the sheaths, through threaded sleeves or flexible and bendable needle sleeves, to cables that can see around corners.

Special materials, such as PVC, silicone or metal tubes, protect the fibre-optic cables against chemical and mechanical effects and make them temperature-resistant up to 160°C. Whether glass fibres for high light outputs or flexible plastic fibre-optic cables with the smallest of bending angles and very high resistance to vibrations and impacts, our standard fibre-optic cables prove their precision and reliability in everyday harsh industrial use.
Checking the presence of small parts on a vibration conveyor system
Page 398
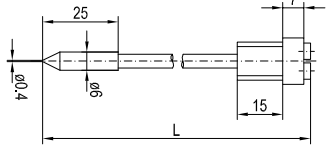

An **FL 70 fibre-optic sensor** registers the presence of work-pieces at the end of the feed section.
- Extremely precise switching behaviour
- Simple teach-in with the help of a display
- Very good small-part detection through the use of focused fibre-optic cables
- Broad and individual range of fibre-optic cables for differing tasks
- Flexible arrangement of the fibre-optic cable
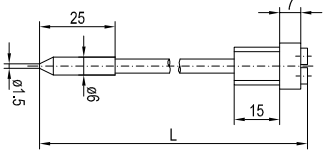

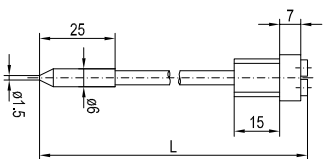

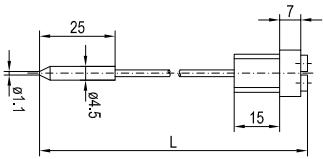

Fibre-optic cables – standard

Fibre-optic cable		Proximity sensor (T) Photoelectric sensor (L)	Typical scanning distance / range	Light exit	Special features	For fibre-optic sensors
18/30 R 0,4/xxxx-Si		T	Up to 3 mm	Axial	• Small mounting dimensions • Robust design	FMS 18 / FMS 30 / FAV 30
18/30 R 1/xxxx-Si/MSC/PVC		T	Up to 15 mm	Axial	• Small mounting dimensions • Robust design	FMS 18 / FMS 30 / FAV 30
18/30 R 2/xxxx-Si/MSC/PVC		T	Up to 60 mm	Axial	• Robust design	FMS 18 / FMS 30 / FAV 30
18/30 R 3/xxxx-Si/MSC/PVC		T	Up to 200 mm	Axial	• Robust design	FMS 18 / FMS 30 / FAV 30
18/30 R 4/xxxx-Si/MSC		T	Up to 400 mm	Axial	• Long range • Robust design	FMS 18 / FMS 30 / FAV 30
18/30 R 12/xxxx-Si/MSC		T	Up to 800 mm	Axial	• Long range • Immune to contamination • Robust design	FMS 18 / FMS 30 / FAV 30
K1R-101		T	Up to 95 mm	Axial	• Small mounting dimensions • Suitable for ancillary lens	FL 70 / FL 20
K2R-102		T	Up to 295 mm	Axial	• Short fastening sleeve	FL 70 / FL 20
K2R-6		T	Up to 265 mm	Axial	• Short fastening sleeve	FL 70 / FL 20
K2R-67		T	Up to 295 mm	Axial	• Oil-resistant • Expanded temperature range	FL 70 / FL 20
LLK1RM3-PE-1m		T	Up to 55 mm	Axial	• Stainless steel head with low head diameter	FL 70 / FL 20
LLK2RM6-PE-1m		T	Up to 280 mm	Axial	• Stainless steel head	FL 70 / FL 20
33R1/xxx-MSC/Si		T	Up to 210 mm	Axial	• Robust design • Low damping	FL 70 / FL 20
K1R-68		T	Up to 200 mm	Axial	• Very small bending radius • Suitable for ancillary lens	FL 70 / FL 20
K1R-35		T	Up to 80 mm	Axial	• Precise switching behaviour on lateral approach • Fibre length individually cutable • Suitable for ancillary lens	FL 70 / FL 20
K2R-25		T	Up to 240 mm	Axial	• Precise switching behaviour on lateral approach • Short fastening sleeve	FL 70 / FL 20
LLK1RKM3-PE-1m		T	Up to 150 mm	Axial	• Precise switching behaviour on lateral approach • Suitable for ancillary lens	FL 70 / FL 20
LLK1RKM3-18-PE-2m		T	Up to 150 mm	Axial	• Precise switching behaviour on lateral approach • Short fastening sleeve • Suitable for ancillary lens	FL 70 / FL 20
LLK2RKM6-PE-1m		T	Up to 310 mm	Axial	• Precise switching behaviour on lateral approach	FL 70 / FL 20
18/30 RZ 1/xxxx-Si/MSC		T	Up to 15 mm	Radial	• For restricted spaces • Robust design • Low damping	FMS 18 / FMS 30 / FAV 30
18/30 RZ 2/xxxx-Si/MSC/PVC		T	Up to 60 mm	Radial	• For restricted spaces • Robust design • Low damping	FMS 18 / FMS 30 / FAV 30
18/30 RZ 3/xxxx-Si/MSC/PVC		T	Up to 200 mm	Radial	• For restricted spaces • Robust design • Low damping	FMS 18 / FMS 30 / FAV 30
18/30 RZ 4/xxxx-Si/MSC		T	Up to 400 mm	Radial	• For restricted spaces • Long range • Robust design	FMS 18 / FMS 30 / FAV 30
18/30 RZ 12/xxxx-Si/MSC		T	Up to 800 mm	Radial	• For restricted spaces • Long range • Robust design • Immune to contamination	FMS 18 / FMS 30 / FAV 30
33 RZ 1/xxx-MSC		T	Up to 210 mm	Radial	• For restricted spaces • Robust design • Low damping	FL 70 / FL 20
LLK2RZ (LS=10)		T	Up to 200 mm	Radial	• For restricted spaces • Precise switching behaviour on lateral approach	FL 70 / FL 20

Fibre-optic cables – standard

K1R-101 fibre-optic cable

Highlights

- Photoelectric proximity sensor
- Small installation dimensions
- Fibre length individually cutable
- For FL 70/FL 20 devices

153-00079

Design Light exit	FL 70 typ. scanning distance (mm) Standard / Fine / High	FL 20 typ. scanning distance (mm) Default setting	Fibre arrange-ment	Suitable for ancillary lens	Core fibre Ø (mm) (T = Transmitter; R = Receiver) Material	Sheath material	Ambient temperature (rigid installation)	Fibre bending radius (mm)	Cable length	Collar bushing	LS (mm)
Mono/axial	60 / 25 / 95	–	See drawing	LVLF6-M3	2 × 0.5 (T/R) PMMA	Polyethylene (PE)	-40 … +70 °C	25	2 m Cutable	M3 Stainless steel	–

Part number	Article number
K1R-101	720-50766

K2R-102 fibre-optic cable

Highlights

- Photoelectric proximity sensor
- Short mounting sleeve
- Fibre length individually cutable
- For FL 70/FL 20 devices

153-00083

Design Light exit	FL 70 typ. scanning distance (mm) Standard / Fine / High	FL 20 typ. scanning distance (mm) Default setting	Fibre arrange-ment	Suitable for ancillary lens	Core fibre Ø (mm) (T = Transmitter; R = Receiver) Material	Sheath material	Ambient temperature (rigid installation)	Fibre bending radius (mm)	Cable length	Collar bushing	LS (mm)
Mono/axial	150 / 85 / 295	80	See drawing	–	2 × 1.0 (T/R) PMMA	Polyethylene (PE)	-40 … +70 °C	25	2 m Cutable	M6x0.75 Stainless steel	–

Fibre-optic cables – standard
30 RZ 4/…-Si fibre-optic cable	Highlights

153-00160

30 RZ 4/…-MSC fibre-optic cable	

153-00160

Highlights

- Photoelectric proximity sensor
- Silicone or metal sheath
- Radial light exit
- Robust design
- -20 … +160 °C
- Fixing via mounting block MB 10 (Article number 903-05142)
- For FMS/FAV devices

| Part number	Article number
LLK2RZ	951-50012
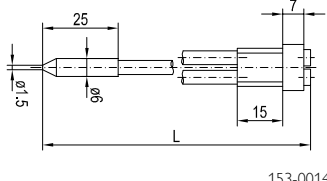

K1RZ-31 fibre-optic cable

Highlights

- Photoelectric proximity sensor
- Precise switching behaviour on lateral approach
- Lateral light exit
- Particularly suitable for restricted spaces
- Fibre length individually cutable
- For FL 70/FL 20 devices

153-00272

Design Light exit	FL 70 typ. scanning distance (mm) Standard / Fine / High	FL 20 typ. scanning distance (mm) Default setting	Fibre arrangement	Suitable for ancillary lens	Core fibre Ø (mm) (T = Transmitter; R = Receiver) Material	Sheath material	Ambient temperature (rigid installation)	Fibre bending radius (mm)	Cable length	Collar bushing	LS (mm)

K2L-201 fibre-optic cable

153-00084

Highlights

- Through-beam photoelectric sensor
- Small installation dimensions
- Suitable for ancillary optics for range expansion
- Fibre length individually cutable
- For FL 70/FL 20 devices

Design Light exit	FL 70 typ. scanning distance (mm) Standard / Fine / High	FL 20 typ. scanning distance (mm) Default setting	Fibre arrange-ment	Suitable for ancillary lens	Core fibre Ø (mm) (T = Transmitter; R = Receiver) Material	Sheath material	Ambient temperature (rigid installation)	Fibre bending radius (mm)	Cable length	Collar bushing	LS (mm)
Mono/axial	120 / 60 / 200	–	See drawing	LVLF6-M3	1 × 0.5 (T) 1 × 0.5 (R) PMMA	Polyethylene (PE)	-40 … +70 °C	25	2 m Cutable	M3 Stainless steel	–

Part number	Article number
K2L-201	721-50771

K2L-202 fibre-optic cable

153-00087

Highlights

- Through-beam photoelectric sensor
- Short mounting sleeve
- Suitable for ancillary optics for range expansion
- Fibre length individually cutable
- For FL 70/FL 20 devices

| Design Light exit	FL 70 typ. scanning distance (mm) Standard / Fine / High	FL 20 typ. scanning distance (mm) Default setting	Fibre arrange-ment	Suitable for ancillary lens	Core fibre Ø (mm) (T = Transmitter; R = Receiver) Material	Sheath material	Ambient temperature (rigid installation)	Fibre bending radius (mm)	Cable length	Collar bushing	LS (mm)

Fibre-optic cables – focused optics

The ideal solution for small-part detection

TYPICAL SENSOPART FIBRE-OPTIC CABLES

- Flexible plastic fibre-optic cables
- Coaxial fibres for precise object detection
- Adjustable scanning distances and light spot sizes
Detection of IC pins
Even the smallest of objects, such as IC pins in electronics production, are reliably detected thanks to focused optics and a small light spot diameter.

Coaxial fibre-optic cables are available with special ancillary optics for differing fixed or variable focus distances, especially for the detection of small objects. Light spot sizes of from 1.3 mm to 0.65 mm can be achieved with focusable coaxial fibre-optic cables. Special cable variants are also available for hole detection.

LLK1RVV6 PE-1m	LLK1RD8V6 PE-1m	LLK1RD12V6 PE-1m	LLK1RD20V6 PE-1m
8 - 20 mm	8.5 mm	12.5 mm	16 mm
Ø 0.6 - 1.3 mm	Ø 0.6 mm	Ø 0.7 mm	Ø 1.3 mm
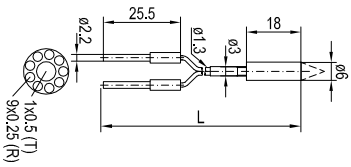

Focused light spot:
The three LLK1RDxV6 fixed focus variants with fixed focal distances (8/12/20 mm) offer maximum precision for small-part detection. The focus of the Varifocus LLK1RVV6 fibre-optic cable can be manually adjusted within a range of from 8 to 20 mm.

Fibre-optic cables – light strips

For edge control and area detection

TYPICAL SENSOPART FIBRE-OPTIC CABLES

- Long ranges

- Several light strip widths available

- Special designs for harsh operating conditions
Monitoring stack height
When an object enters the detection area of the LLK2SLR fibre-optic cable, the connected FL 70 RA sensor receives a weakened light signal. The transmitted analogue value is proportional to the light signal and thus allows monitoring of the stack height.
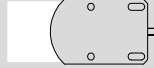

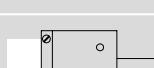

Cross-section converter
While the light exit of standard glass fibres is round, cross-section converters have a light exit that is designed as a rectangle or a thin line, for example.
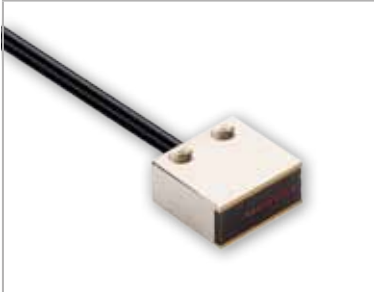

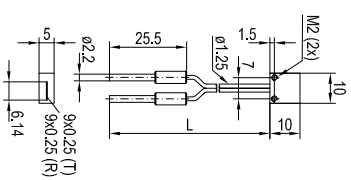

A light strip can be of advantage for particular applications, e.g. for edge control during the production of foils, paper, sheet metals or textiles, or for measuring thickness and position. For such cases, fibre-optic cables are used with a special light exit sleeve – a so-called cross-section converter that generates a wide rectangular light strip. SensoPart offers light strips in a variety of designs and materials.

LLK2SLR fibre-optic cables combined with the FL 70 RA fibre-optic sensor are of particular importance. This system allows determination of the size of objects in the optical path.

LLK2SLR fibre-optic cables spread a light strip in through-beam photoelectric sensor operation. When an object enters the optical path, the information is passed on to the FL 70 RA fibre-optic sensor which provides an absolute value via its analogue output. This allows, for example, the monitoring of stack heights, the sorting of small parts, the measurement of thicknesses and much more besides.

Fibre-optic cables – special designs

Fibre-optic cables for special requirements
Level measurement with fibre-optic cables: *This photoelectric proximity sensor can be mounted on transparent vessels, pipes and tubes with diameters of 6 to 26 mm. Reliable detection of liquids and levels is guaranteed – even with non-transparent liquids.*
Flexible scanning heads
The bundle of glass-fibres in a fibre-optic cable ends with a flexible scanning head in a small, thin, bendable stainless steel tube. This tube can be bent into the necessary shape for mounting in hard-to-reach locations.

TYPICAL SENSOPART FIBRE-OPTIC CABLES

- Fine, flexible stainless steel tips for highly restricted and hard-to-reach installation locations
- V-scanners with small, flexible mounting heads for detecting small objects
- Prismatic scanners and V-scanners for monitoring liquids and filling levels
- Fork sensors in particularly small housings
- Compact installation dimensions
- Reliable detection

SensoPart offers a variety of special fibre-optic cable designs for particular applications and installation situations. Fork sensors, for example: in the fork design, the transmitter and receiver are precisely adjusted towards one another so that no alignment is necessary. Typical applications are the reliable detection of marks on continuous strips and small-part detection from a diameter of 0.2 mm.

Fibre-optic cables with very fine, flexible stainless steel tips are another highlight. The extraordinarily thin tube diameter allows access to extremely restricted spaces. The stainless steel tip can be individually reshaped with small bending radii and remains stable in this position. This ensures smooth process operation.

Particularly precise filling level monitoring is achieved by level sensors with glass tips. The sensor operates according to the principle of total reflection. The transmitted light is totally reflected in air in the prismatic tip and reaches the receiver without any appreciable loss. If the tip is now immersed in liquid, the refractive index changes and some of the light is refracted in the liquid. The light now arriving at the receiver is dampened and the sensor switches.

9
Perforation detection with a fork sensor
The fork sensor reliably detects the pattern of holes on the strip. Simple alignment and mounting, as well as its reliable detection principle, ensures trouble-free production processes.
Method of function of the prismatic scanner
If the glass prism of the prismatic scanner is in air (left), total reflection results in almost all the light energy being reflected back to the receiver element of the fibre-optic sensor. If the refractive index of the surrounding liquid medium is large enough (n > 1.20), most of the light energy is coupled on the interface of the prismatic tip. The fibre-optic sensor switches.

Fibre-optic cables – special designs

Fibre-optic cable		Proximity sensor (T) Photoelectric sensor (L)	Typical range	Light exit	Special features	For fibre-optic sensors

Fibre-optic cables – accessories

Everything needed for using fibre-optic cable systems

From products "by the metre" to ancillary lenses – SensoPart offers all the accessories necessary for the use of fibre-optic sensors. The comprehensive range also includes a special combination tool with which the sensitive fibre-optic cables can be shortened and bent with almost no performance loss.
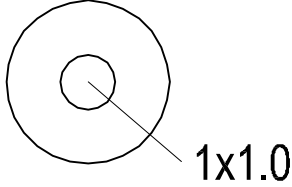

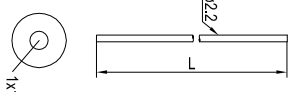

TYPICAL SENSOPART FIBRE-OPTIC CABLES

- Ancillary lenses for expanding the range of standard fibre-optic cables

- Deflection head for restricted spaces

- Connection adapter for all conventional fibre-optic sensors

- Precise shortening and bending of fibre-optic cables with almost no performance loss

Fork sensors and optical windows

Experts in small part detection and counting tasks

FGL-RK – LED red light fork sensors

from Page 534

- Precise small part detection from 0.2 mm
- Indicator LEDs with all-round visibility over entire fork edge
- Simple sensor mounting via dovetail guides
- Sensitivity adjustment via teach-in button or control line

FGL-IK – infrared fork sensors

from Page 536

- Precise small part detection from 0.2 mm
- Indicator LEDs with all-round visibility over entire fork edge
- Simple sensor mounting via dovetail guides
- Sensitivity adjustment via teach-in button or control line

FGL – LED red light fork sensors with metal housings

from Page 538

- Resistant zinc die-cast housings
- High switching frequency up to 3 kHz
- Sensitivity adjustment via potentiometer

Fork sensors and optical windows display characteristic properties as a result of their special housing design: thanks to their precise beam guidance they are particularly suitable for small part detection. The sensors are also easy to mount because no time-consuming adjustment is required.

The fork sensors of the FGL-IK and FGL-RK series detect parts from a diameter of 0.2 mm. They are used, for example, for small part detection on conveyor sections and chutes or for counting bulk goods on vibration conveyors. Rotational speed measurement is another typical application. The optical windows of the FG series are employed, for example, for detecting thread breaks in the textile industry, for part detection in transparent tubes in pneumatic conveyors, or for ejection detection. Fork sensors and optical windows are frequently the first choice for use in plants subject to strong vibrations, in particular, thanks to their robust housings and the design-related fixed light beam.

Precise detection and user-friendly details: plastic fork sensors
Fork sensors with plastic housings (FGL-RK and –IK series) are, in all respects, perfectly thought-through products. On the one hand, they are particularly shatterproof thanks to the elastic housing material, on the other hand, their numerous user-friendly detail solutions are highly impressive. Thus, in addition to the usual mounting holes, threaded sleeves and dovetail designs are also integrated. In combination with the MBD-S94 bracket, the latter permits flexible mounting in almost any desired position in the process. Operation by means of dynamic teach-in also very easy: the measurement sensitivity can be directly adjusted on moving objects. In addition, the switching distance can be checked anytime thanks to the all-round visibility of the Indicator LEDs. Even a product that, at first glance, appears simple can be quite refined!

FGL with mounted MBD-S94 bracket and easily visible Indicator LEDs on the fork edge.

FG – Infrared optical windows
from Page 542

- *Robust metal housings*
- *Sensitivity adjustment per potentiometer*
- *Adjustable output signal duration of 10 … 300 ms*
- *Dynamic signal evaluation*

🔴🟡 made in Germany

TYPICAL SENSOPART

- Simple and robust housing
- Metal or plastic housing options (FGL) or robust metal housings (FG)
- High resolution for precise small part detection (fork sensors from 0.2 mm, optical windows from 0.8 mm)
- Various fork and window widths available
- Easy, rapid mounting without complicated adjustment

- Red light or infrared LED options
- High switching frequency of up to 3 kHz
- Dynamic signal evaluation (FG)
- 3- or 4-pin connector depending on variant
- Reliable function even in harsh conditions
- Indicator LEDs easy to see from all sides

Fork sensors

System description

Method of function

Fork sensors function according to the through-beam principle. The transmitter is located in one arm of the fork and transmits its light to the receiver directly opposite in the other fork arm. Thus a great advantage of fork sensors is that the transmitter and the receiver no longer need to be aligned. Reduced cabling work and flexible mounting possibilities further accelerate commissioning of the sensors. The shared housing design is available in differing fork widths (5 … 220 mm) and fork depths. The particular advantage of fork sensors lies in their simple commissioning.

An important feature of SensoPart fork sensors is their particularly reliable function with maximum precision. The smallest objects, with a diameter of 0.2 mm, are reliably detected. High switching frequencies also allow detection with rapid conveyor processes. Sensitivity adjustment of the sensors takes place via a teach-in button and can be carried out during running processes (dynamic teach-in). Fork sensors are available with metal or plastic housings, red light or invisible infrared light.

Precise small part detection on feed belts, rotational speed measurement or the precise positioning of objects are typical applications for fork sensors.

Metal version
- Simple and robust design
- N.O./N.C. function switchable
- 3-pin connection plug

Plastic version
- NPN or PNP output options
- 3- or 4-pin connection plug
- Dynamic teach-in
- Adjustment also possible on moving objects
- Switching state LEDs visible all-round
- Numerous mounting possibilities (including dovetail)
Counting parts on a vibration conveyor
An **FGL fork sensor** checks whether the feed section is completely occupied with work-pieces and, if necessary, stops the conveyor.

Optical windows

System description

Method of function

Strictly speaking, optical windows are through-beam light grids. In effect, several through-beam photoelectric switches are mounted and aligned on two opposite sides. Modulation of the transmitted light and the special geometrical arrangement ensure that the differing "through-beam photoelectric switches" do not interfere with one another. The number of "photoelectric switches" in the housing is an indication of the optical window's resolution and thus determines the minimum object size of the detection quality. The shared housings are available in differing frame widths (40, 80, 120 mm).

The simple cabling due to a single shared plug, the pre-aligned transmitter and receiver – and thus simplified commissioning – are particular advantages of the optical windows. Simply connect and align. Finished.

Checking the ejection of small parts, e.g. on presses and stamping machines, is a typical application for optical windows. Whereby the resolution of the light grid and its response time is decisive for the reliable detection of small objects. The resolution of SensoPart optical windows ensures the reliable detection of small parts from as little as 0.8 mm. It is even possible, thanks to dynamic signal evaluation, to detect objects through transparent tubes. The adjustable output signal duration (signal length: 10 … 300 ms) ensures maximum compatibility with the PLC.

Features

- High resolution
- Dynamic signal evaluation
- Infrared light
- Robust metal housings
- Simple sensitivity adjustment via potentiometer
FG detection of objects through a tube
Optical windows also detect objects transported through a partially transparent tube thanks to dynamic evaluation.

Ultrasonic sensors may be a useful alternative where optical sensors come up against their physical limits. This applies, for example, for objects with uneven surfaces or under difficult ambient conditions, or with highly transparent media as well as moving, highly reflective liquid surfaces. Typical uses of ultrasonic sensors are therefore checking the presence of highly transparent foils and measuring the filling levels in liquid containers. A major advantage of ultrasonic sensors is the absolutely reliable background suppression resulting from their sound time-of-flight measurement principle.

The new ultrasonic sensor with soundpipe (UT 20S), in its very compact cubic housing, is a special product variant. As a result of its narrow sound cone, it allows the detection of objects even through the smallest of openings and drilled holes with a diameter of less than 5 mm. This makes it ideal for special applications, such as level measurement in the wells of microplates in medical analysis systems or for scanning circuit boards in the electronics industry.

The ultrasonic sensors of the UMT 30 series are real multifunctional artists. A three-digit display makes all sensor settings easy for users. The add-on menu with numerous supplementary functions, e.g. the synchronisation of several sensors or multiplex operation, in which several sensors measure after one another in ascending order, allows the UMT 30 to offer extremely flexible use for a wide range of applications.
The UT 20-S measuring levels in microplate wells.

Deflection mirrors are available for deflecting the sound beam when machine space is limited.

UMT 30
from Page 578

UMT 30 – M30 ultrasonic sensors
with display
- *Long scanning distances up to 6 m*
- *Simple adjustment and direct measurement value output via display*
- *Automatic synchronisation and multiplex operation for the simultaneous operation of up to 10 sensors*
- *Numerous supplementary functions (add-on menu)*

■■■ made in Germany

TYPICAL SENSOPART

- Reliable detection of objects with critical surfaces and highly transparent objects
- Available in cubic (32 × 20 × 12 mm^3) or cylindrical (M12/M18/M30) housing options
- Simple adjustment via teach-in, control input or display
- PNP, NPN or analogue output options
- Tight metal or plastic housings (IP 67 & IP 65)
- Wide range of mounting accessories

11

Ultrasonic sensors

System description

Method of function

Ultrasonic proximity switches operate on the basis of echo time-of-flight measurement. An ultrasonic pulse emitted by the sensor is reflected when it hits an object. The sensor calculates the distance from the time elapsed between emission of the ultrasonic pulse and receipt of the echo. Depending on the power amplifier, the measured distance is converted to a current or voltage signal (analogue sensor) proportional to the distance or the switching output is activated, depending on the set switching point.

Applications
a) Output on
b) Output off
c) Adjusted switching distance

As a reflex scanner (proximity switch)
The classic operating mode uses background suppression, superior to other sensor principles. The switching output is activated when the object is located within the set switching distance. The switching point is subject to a hysteresis. This operating mode is suitable, for example, for detecting objects on a conveyor belt or for checking presence.

a)* Output on
b) Configured window
c) Reflector
* No object = output off

As a barrier or reflex switch
An ultrasonic sensor is used like a light barrier here, though no special reflector is employed (a piece of sheet metal is entirely sufficient here). For this purpose, the sensor in window mode is set in such a way that the reflector is located within the window. The ultrasonic reflex switch provides a signal as soon as an object is completely covered by the reflector. Whereby it is irrelevant whether the object absorbs the sound or even deflects it away. This operating mode is used for poorly detected material with irregular surfaces, e. g. foam.
a) Output off
b) Output on
c) Output off
d) Configured window

In window mode
The switching output is only activated when the object is located within a window that has been defined by setting two window limits. This can be used to monitor, for example, the correct bottle size in a crate of drinks. Bottles that are too tall or too short are diverted out.
a) Linear output
b) Configured analogue window

Ultrasonic sensors with analogue output
In these models a voltage ($0\ldots10\,$V) or current ($4\ldots20\,$mA) is transmitted in proportion to the object distance. The window limits can be defined and selected between falling and rising characteristic curves.

Installation

a) Smooth
b) Rough
Ultrasonic sensors can be installed and operated in any orientation. Though installation locations that could lead to contamination of the sensor surface should be avoided because water droplets and encrustation can impair functional performance. Thin layers of dust and paint droplets generally have no effect.

If smooth surfaces are to be detected, sensors should be mounted as vertically as possible, i.e. at an angle of from 87° to 93° to the surface.

Rough surfaces, on the other hand, permit considerably greater angular deviations. A surface whose valley-to-peak depth is greater than or equal to the wavelength of the ultrasonic frequency is considered rough. The sound, however, is then reflected diffusely, which can lead to a reduction of the operating scanning distance. In this case the maximum permissible angular deviation and maximum scanning distance should be determined in trials.

Sound-absorbing materials (such as cotton wool or foam) can further reduce the scanning distance. In contrast, liquids and solid materials are good reflectors.

Mounting distances

a) Switching distance

	A	B
0.25 m	≥ 0.35 m	≥ 2.50 m
0.35 m	≥ 0.40 m	≥ 2.50 m
1.30 m	≥ 1.10 m	≥ 8.00 m
3.40 m	≥ 2.00 m	≥ 18.00 m
6.00 m	≥ 4.00 m	≥ 30.00 m

The table provides the minimum distances between non-synchronised ultrasonic sensors. Sensors may mutually influence one another if these distances are not observed.
The above-mentioned mounting distances are only intended as a guide. In the case of tilting, the sound can be reflected towards the neighbouring sensor. The minimum distance should then be determined by means of trials. Some sensors permit synchronisation with one another and thus allow considerably lower scanning distances.

UT 20-S150

Ultrasonic sensor with soundpipe and switching output

PRODUCT HIGHLIGHTS

- Ideal for level control, particularly in narrow containers
- Narrow sound beam for precise detection even through small openings and drilled holes
- Reliable detection of highly transparent objects
- Detection independent of object colour and surface
- Compact miniature housings for use when space in machine is limited

Sensor data

Ultrasonic sensor with analogue output

CE

IP 67

PRODUCT HIGHLIGHTS

- Detection regardless of object colour and surface
- Compact miniature housing for use when machine space is limited
- Synchronisation input – simultaneous operation of several sensors in highly limited spaces
- Analogue output: 0 … 10 V or 4 … 20 mA

Sensor data[1]	
Limit scanning distance	250 mm
Operating scanning distance	20 … 150 mm
Ultrasonic frequency	~ 380 kHz
Resolution	0.20 mm
Repeatability	± 0.15 %[2]
Temperature drift	≤ 2 %

Functions	
Indicator LED, green	Operating voltage indicator
Indicator LED, yellow	Switching output indicator
Set characteristic analogue curve	Via Teach-in button
Adjustment possibilities	Rising / falling slope via Teach-in button
	Button lock via Teach-in button
	Synchronisation via control input
	Default settings via Teach-in button

Electrical data	
Operating voltage, $+U_B$	20 … 30 V DC[3]
No-load current, I_0	≤ 25 mA
Current output	$R_a < 500\ \Omega$
Voltage output	$R_a > 500\ \Omega$
Protective circuits	Reverse polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Analogue output	0 … 10 V / 4 … 20 mA (see Selection Table)
Response time	30 ms
Connection, WH	Sync.

Mechanical data	
Dimensions	32 × 21.6 × 12 mm
Enclosure rating	IP 67[4]
Material, housing	ABS
Material, ultrasonic converter	Polyurethane foam, epoxy resin with glass content
Type of connection	(See Selection Table)
Ambient temperature: operation	-25 … +70 °C
Ambient temperature: storage	-40 … +85 °C
Weight	10 g
Vibration and impact resistance	EN 60947-5-2

Ultrasonic sensor with switching output

PRODUCT HIGHLIGHTS

- Ideal for monitoring filling levels, e.g. of liquids
- Reliable detection of highly transparent objects
- Detection regardless of object colour and surface
- Compact miniature housings for use when machine space is limited

Sensor data	
Limit scanning distance	350 mm
Operating scanning distance	50 … 240 mm
Ultrasonic frequency	~500 kHz
Resolution	0.20 mm
Repeatability	± 0.15 %[1]
Hysteresis	2 mm
Temperature drift	0.17 % / °C

Functions		
Indicator LED, green	Operating voltage indicator	
Indicator LED, yellow	Switching output indicator	
Scanning distance adjustment	Via Teach-in button	
Teach-in modes	Mode 1: set switching point	
	Mode 2: set window operation	
	Mode 3: set two-way / retroflective sensor	
Adjustment possibilities	N.O. / N.C. via Teach-in button	
	Button lock via Teach-in button	
	Synchronisation via control input	
	Default settings via Teach-in button	
Default settings	Max. sensitivity and N.O.	

Electrical data	
Operating voltage, $+U_B$	20 … 30 V DC[2]
No-load current, I_0	≤ 25 mA
Output current, Ie	200 mA
Protective circuits	Reverse polarity protection, U_B / short-circuit protection (Q)
Protection Class	2
Power On Delay	< 300 ms
Switching output, Q	PNP / NPN (see Selection Table)
Output function	N.O. / N.C.
Switching frequency, f (ti/tp 1:1)	25 Hz
Response time	24 ms
Connection, WH	Sync.

Ultrasonic sensor with switching output

CE

PRODUCT HIGHLIGHTS

- Robust M18 metal housing for harsh operating conditions
- Detection regardless of object colour and surface
- Adjustable window mode
- Selectable N.O. / N.C.

Sensor data	
Operating scanning distance	30 … 300 mm
Adjustment range	50 … 300 mm
Ultrasonic frequency	~ 390 kHz
Hysteresis	1 %[1]
Temperature drift	± 1.5 %[2]
Repeatability	≤ 1 %

Functions	
Indicator LED, yellow	Switching output indicator
Indicator LED, red	Fault indicator
Scanning distance adjustment	Via control input
Teach-in modes	Mode 1: set switching point (N.O. / N.C.) Mode 2: set window operation (N.O. / N.C.)
Default settings	Switching point 1 = 50 mm Switching point 2 = 300 mm

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[3]
No-load current, I_0	≤ 20 mA
Output current, le	200 mA
Voltage drop, U_D	≤ 3 V
Protective circuits	Short-circuit protection (Q) / overload protection
Switching output, Q	PNP
Output function	N.O. / N.C.
Switching frequency, f (ti/tp 1:1)	≤ 13 Hz
Response time	≤ 30 ms
Control input, WH	- U_B = switching point 1 + U_B = switching point 2

Mechanical data	
Dimensions	M18 x 50.2 mm
Enclosure rating	IP 65[4]
Material, housing	Nickel-plated brass
Material, ultrasonic converter	Polyurethane foam, epoxy resin with glass content, PBT (lid)
Type of connection	(See Selection Table)
Ambient temperature: operation	-25 … +70 °C
Ambient temperature: storage	-40 … +85 °C
Weight	25 g

[1] Relating to set switching distance   [2] From end-value   [3] Max. 10 % ripple, within U_B [4] With connected IP 65 plug

Ultrasonic sensor with analogue output

CE

PRODUCT HIGHLIGHTS

- Robust M18 metal housing for harsh operating conditions
- Detection regardless of object colour and surface
- Analogue output: 4 … 20 mA
- Rising/falling output characteristic adjustable

Sensor data	
Operating scanning distance	30 … 300 mm
Adjustment range	50 … 300 mm
Ultrasonic frequency	~ 390 kHz
Resolution	0.40 mm[1]
Temperature drift	± 1.5 %[2]
Repeatability	± 0.5 %[2]

Functions		
Indicator LED, yellow	Switching output indicator	
Indicator LED, red	Fault indicator	
Set characteristic analogue curve	Via control input	
Adjustment possibilities	Rising / falling slope via control input	
Default settings	Evaluation limit 1 = 50 mm Evaluation limit 2 = 300 mm	

Electrical data	
Operating voltage, +U_B	10 … 30 V DC[3]
No-load current, I_0	≤ 20 mA
Current output	R_a < 300 Ω
Protective circuits	Short-circuit protection (Q) / overload protection
Analogue output	4 … 20 mA
Response time	≤ 30 ms
Control input, WH	- U_B = lower evaluation limit + U_B = upper evaluation limit

Mechanical data	
Dimensions	M18 x 50.2 mm
Enclosure rating	IP 65[4]
Material, housing	Nickel-plated brass
Material, ultrasonic converter	Polyurethane foam, epoxy resin with glass content, PBT (lid)
Type of connection	(See Selection Table)

UM 18-60/250

Ultrasonic sensor with switching output

CE

PRODUCT HIGHLIGHTS

- Robust M18 metal housings for harsh operating conditions
- Optional brass or stainless steel housings
- Operating scanning distance either 60 mm or 250 mm
- Simple sensor settings via control input

Sensor data	
Limit scanning distance	350 mm
Operating scanning distance	30 … 250 mm
Ultrasonic frequency	~ 320 kHz
Resolution	0.36 mm
Repeatability[1]	< 1 mm
Hysteresis	2 mm
Temperature drift	0.17 % / K

Functions	
Adjustment possibilities	Operating scanning distance 60 mm / 250 mm via control input

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[2]
No-load current, I_0	≤ 30 mA
Output current, Ie	500 mA
Voltage drop, Ud	< 2.4 V DC
Protective circuits	Reverse polarity protection, U_B / short-circuit protection (Q)
Switching output, Q	PNP
Output function	N.O.
Switching frequency, f (ti/tp 1:1)	25 Hz
Control input, WH	$+ U_B$ = operating scanning distance 250 mm - U_B / open = operating scanning distance 60 mm

Mechanical data	
Dimensions	M18 × 95 mm
Enclosure rating	IP 65[3]
Material, housing	(See Selection Table)
Type of connection	(See Selection Table)
Ambient temperature: operation	-20 … +70 °C
Ambient temperature: storage	-40 … +85 °C
Weight	80 g

[1] With constant ambient conditions   [2] Max. 10 % ripple, within U_B [3] With connected IP 65 plug

Ultrasonic sensor with switching output

PRODUCT HIGHLIGHTS

- Ideal for monitoring the filling levels of liquids such as fats and oils
- With one or two switching outputs as option
- Easy pre-setting of sensor via digital display – sensor immediately ready for operation
- Synchronisation of up to 10 devices in restricted spaces
- Additional features with numerous supplementary functions

Sensor data	
Limiting scanning distance	600 mm
Operating scanning distance	65 … 350 mm
Ultrasonic frequency	~ 400 kHz
Resolution	0.025 mm
Repeatability	± 0.15 %[1]
Hysteresis[2]	5 mm
Temperature drift[2]	± 1 % (Temperature drift internal compensated, may be deactivated, 0.17 % / K without compensation)

Functions	
Display	Parameterisation
LED indicator 1	Switching output indicator
LED indicator 2	Switching output indicator
Scanning distance adjustment	Via Teach-in buttons and numerically via 7-segment display
Teach-in modes	Mode 1: set switching point Mode 2: set Window Mode Mode 3: set two-way reflex switch
Adjustment possibilities	N.O. / N.C. via Teach-in button Button lock via Teach-in button Default settings via Teach-in button
Supplementary functions	– Energy-saving Mode – Hysteresis – Measurement value filter – Filter strength – Response delay – Foreground suppression – Multiplex Mode, device address – Multiplex Mode, highest address – Measurement range – Calibration display – Detection range, sensitivity
Default settings[3]	Measurement range: limit scanning distance Switching distances: scanning distance Switching output: N.O.
Default settings[4]	Measurement range: limit scanning distance Switching distances: scanning distance and half scanning distance Switching output: N.O.

Electrical data	
Operating voltage, $+U_B$	9 … 30 V DC[5]
No-load current, I_0	≤ 80 mA
Output current, Ie	200 mA
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Power On Delay	< 300 ms
Switching output, Q	1 × PNP / 2 × PNP (see Selection Table)
Output function	N.O. / N.C.
Switching frequency, f (ti/tp 1:1)[2]	8 Hz[3] / 12 Hz[4]
Response time[2]	70 ms[3] / 64 ms[4]
Connection, GY	Sync. / Com.

Mechanical data	
Dimensions	M30 × 84 mm
Enclosure rating	IP 67[6]
Material, housing	Brass, nickel-plated, plastic content: PBT, TPU
Material, ultrasonic converter	Polyurethane foam, epoxy resin with glass content
Type of connection	(See Selection Table)
Ambient temperature, operation	-25 … +70 °C
Ambient temperature, storage	-40 … +85 °C
Weight (plug device)	150 g
Vibration and impact resistance	EN 60947-5-2

[1] Related to current measurement value   [2] Parameterisable via control panel   [3] 1 × PNP   [4] 2 × PNP   [5] Max. 10 % ripple, within U_B [6] With connected IP 67 plug

UMT 30-1300-A

Ultrasonic sensor with analogue output

PRODUCT HIGHLIGHTS

- Ideal for monitoring the filling levels of liquids such as fats and oils
- Automatic selection to current or voltage output
- Easy pre-setting of sensor via digital display – sensor immediately ready for operation
- Synchronisation of up to 10 devices in restricted spaces
- Additional features with numerous supplementary functions

Sensor data	
Limiting scanning distance	2000 mm
Operating scanning distance	200 … 1300 mm
Ultrasonic frequency	~ 200 kHz
Resolution [1]	0.18 … 0.57 mm
Repeatability	± 0.15 %[2]
Temperature drift[3]	± 1 % (Temperature drift internal compensated, may be deactivated, 0.17 % / K without compensation)

Functions	
Display	Parameterisation
LED indicator 1	Switching output indicator
LED indicator 2	Switching output indicator
Set analogue characteristic	Via Teach-in buttons and numerically via 7-segment display
Teach-in modes	Mode 1: set window limits Mode 2: rising / falling output characteristics
Adjustment possibilities	Button lock via Teach-in button Default settings via Teach-in button
Supplementary functions	– Energy-saving Mode – Indicator Mode – Current or voltage output selection – Measurement value filter – Filter strength – Response delay – Foreground suppression – Multiplex Mode, device address – Multiplex Mode, highest address – Measurement range – Calibration display – Detection range, sensitivity
Default settings	Measurement range: limit scanning distance Window limits, analogue signal: blind zone and scanning distance Switching output: rising analogue characteristic

Electrical data	
Operating voltage, +U_B	9 … 30 V DC[4]
No-load current, I_0	≤ 80 mA
Current output	R_L ≤ 100 Ω with 9 V ≤ U_B ≤ 20 V; R_L ≤ 500 Ω with U_B ≥ 20 V
Voltage output	R_L ≥ 100 kΩ with U_B ≥ 15V
Protective circuits	Reverse-polarity protection, U_B / short-circuit protection (Q)
Power On Delay	< 300 ms
Analogue output	0 … 10 V / 4 … 20 mA
Response time[3]	92 ms
Connection, GY	Sync. / Com.

Inductive sensors

The metal detectors

Cubic housings from
from Page 600

- *Variety of housing sizes for numerous applications*
- *Plastic or metal housing options*
- *Switching distances from 1.5 mm to 35 mm*
- *Numerous connection possibilities*
- *Flush, quasi-flush and non-flush mounting possibilities*

Because of their functional principle, inductive sensors are only suitable for detecting metal objects. But they do this extremely reliably and are also very robust and resistant (e.g. regarding environmental factors), which makes them interesting for numerous industrial applications. They are mainly used wherever the detection of uniform movements is involved – for example as proximity switches for determining the position of transported machine parts such as saddles or hydraulic cylinders, for measuring rotary speeds on vehicle crankshafts, or as pulse generators for motor ignition.

Inductive sensors are extremely precise due to their high repeatability levels. Their simple design and uncomplicated commissioning ensure minimal downtimes. Whether in robotics, in assembly and handling, in factory automation or mechanical engineering: inductive sensors from SensoPart are reliable, require no maintenance, and offer versatile use thanks to the numerous housings and sizes available.

TYPICAL SENSOPART

- Reliable detection of metallic objects
- Product variants for standard or three-fold switching distances
- Robust cylindrical or cuboid metal housing options
- Simple installation thanks to integrated metric threads
- Different designs for flush, quasi-flush and non-flush mounting
- Switching or analogue output options available
- NAMUR-compliant design on request

Cylindrical housings

from Page 608

- *Variety of housing sizes for numerous applications*
- *High switching frequency of up to 5 kHz*
- *Robust stainless steel designs*
- *With switching or analogue output options*
- *Highly pressure-resistant sensors for up to 800 bar*
- *Flush, quasi-flush and non-flush mounting possibilities*
- *Full-metal "see-through" sensors (metal face)*
- *Three-fold switching distance*
- *K-factor 1, switching distance independent of type of metal*

Inductive Sensors

System description

Method of function

Sensor field, coil, core   Oscillator   Demodulator   Trigger   Output driver
Inductive sensors exploit the interaction of metallic conductors with their alternating electromagnetic fields. Eddy currents are induced in the conductor. They draw energy from the field, reducing the oscillation amplitude. Inductive sensors evaluate this change. The area through which the high-frequency sensor field enters space is described as the active area. It roughly corresponds to the area of the pot core cap.

Applications

Inductive sensors are suitable for controlling and monitoring machine processes, and for providing signals in counting tasks where metals are involved. In particular, they are characterised by their immunity to vibrations, impacts, dust and dampness, and operate with extreme precision.

Flush-mountable proximity switches
Flush-mountable proximity switches can be embedded in metal up to the active area. The distance to any metal surfaces opposite must be ≥ 3 Sn and the distance between two proximity switches (mounted in series) must be ≥ d.

Non-flush mountable proximity switches
Non-flush mountable proximity switches have no metal housing near the active area. They have a free zone. For this reason they experience no pre-damping of the sensor field and can – unlike flush-mountable sensors – be used at longer switching distances. A metal-free zone, however, must always be maintained around the active area. The distance to any metal surfaces opposite must be ≥ 3 Sn and the distance between two proximity switches (mounted in series) must be ≥ 2 d.

* Metal-free zone

Quasi-flush-mountable proximity switches
Quasi-flush-mountable proximity switches require a space behind the active area that is kept free of conductive materials. As a result, the nominal switching distance is available without restriction. Whereby the value "x" is the shortest distance between the active area and the conductive material located behind it.

Opposite mounting
All inductive proximity sensors mounted facing one another require a minimum distance of ≥ 3 d between their active areas.

- *Smallest design (ø 6.5 mm) with robust stainless steel housings*
- *Switching distance 0.1 … 1.5 mm (flush) or 0.1 … 3 mm (non-flush)*
- *Suitable for object detection and filling level measurement when mounting space limited*

KD/KL 08

from Page 656

- *Compact design in stainless steel housings*
- *Simple mounting thanks to universal M8 threads*
- *Switching distance 0.1 … 1.5 mm (flush) or 0.1 … 3 mm (non-flush)*

KD/KL 12

from Page 658

- *Robust stainless steel housings with universal M12 threads*
- *Switching distance 1 … 4 mm (flush) or 1 … 8 mm (non-flush)*
- *Sensitivity adjustment via potentiometer*

Capacitive sensors are suitable for the detection of metallic and non-metallic objects of all types. Even highly transparent glasses or liquids are easy to detect with a capacitive sensor. Only the dielectric conductivity of the target material is relevant: the greater the dielectric constant of a material, the higher the possible switching distances or the more reliable the detection.

The measurement of filling levels is among the classic applications of capacitive sensors because many liquids have comparatively high dielectric constants. Under certain circumstances it is also possible to measure from outside the container because capacitive sensors can, so to speak, see through walls. They are also used for detecting solids such as wood, paper and plastics. They are found in the most varied of industrial sectors due to their great immunity to interfering factors of all types. SensoPart offers a wide range of capacitive sensors in cylindrical housings for all areas of use.

TYPICAL SENSOPART

- Switching distances from 0.1 to 30 mm
- Robust cylindrical stainless steel housings (6.5 to 30 mm)
- Easy mounting thanks to conventional cylinder construction
- Simple sensitivity adjustment via potentiometer
- Various designs for flush and non-flush mounting
- Switching output: PNP or NPN
- Output function: N.O. or N.C.

13

Capacitive sensors

System description

Method of function
The non-contact capacitive sensor converts a value of interest for production purposes (distance or filling level) to a signal that can be further evaluated. Function is based on the change in the electrical field in the area of its active face. The basic structure of the device consists of an RC oscillator as a sensor, a demodulator and an output level.

The approach of metals or non-metals to the active face of the capacitive sensor results in a change in capacity, whereby the RC oscillator begins to oscillate. This causes the trigger level downstream from the oscillator to tip, and the switching amplifier changes its output state. The switching function at the output is N.O., N.C. or change-over contact depending on the device type.

Installation
Flush version
Sensors with a linear electrical field. These devices scan solid bodies (e.g. wafers, components, circuit boards, hybrids, cartons, stacks of paper, bottles, plastic blocks and sheets) for distance, or liquids through a partition made of glass or plastic (max. thickness 4 mm).
Non-flush version
Sensors with a spherical electrical field. The active face of these devices should be in contact with the target product to be actively scanned (e.g. granulate, sand, oil or water).

Size correction factor
With objects that are not flat and are smaller compared to the active face one obtains the following switching distances depending on the standardised surface F/F0 with F0 = sensor face surface (active face) and F = face surface of the target object. The data relate to flush sensors and objects in the form of long thin rods.

Standardised object area	Switching distance, S in %	ø – object in mm	F in mm²	S in mm
1.50	100	22	380	8
1.24	100	20	314	8
0.8	100	16	201	8
0.61	100	14	154	8
0.31	94	10	79	7.5
0.20	85	8	50	6.8
0.15	82.5	7	38	6.6
0.05	67.5	4	13	5.4
0.03	57.5	3	7	4.6

Table 1

Applications

Capacitive proximity switches are suitable for controlling and monitoring machine processes and for providing signals for counting tasks where metals and non-metals are available, as well as for signalling levels in containers and through container walls where liquid, pulverised or grainy materials require detection.

The dielectric constant of all solids and liquids is greater than air ($\varepsilon_{air} = 1$; see Table 2). Similarly, objects made of non-conductive materials have an effect on the active face of a capacitive sensor by increasing the coupling capacity. Materials with greater dielectric constants achieve longer switching distances. When scanning organic materials (wood, grain, etc.) it should be noted that the achievable switching distance is very strongly influenced by the water content ($\varepsilon_{water} = 80$!)

Types of interaction
Fig. 1
Fig. 2

Capacitive sensors are actuated by both conductive and non-conductive objects. Objects made of conductive materials form a counter-electrode to the sensor's active face. This forms two capacities, C_A and C_B connected in series, with the electrode surfaces A and B (Fig. 1). The capacity of this serial connection is always greater than the capacity of the uncovered electrodes A and B.

Metals achieve the highest switching distances due to their very high conductivity. Reduction factors for differing metals – like those of inductive sensors – must be taken into account.

Actuation by objects made of non-conductive materials (insulators): when one places an insulator between the electrodes of a condenser the capacity increases with the dielectric constant ε (Fig. 2) of the insulator.

13

Capacitive sensors

System description

The effect of differing materials

Switching distance and dielectric constants

The switching distance (S_r) is dependent on the dielectric constant (ε_r) of the target object. The maximum switching distance (100 %) is achieved with metallic objects while it is reduced with other materials in proportion to the dielectric constant of the target object.

Table 2 (below) shows the dielectric constants of some important materials. As a result of the high dielectric constant value of water, wood exhibits relatively large fluctuations. Damp wood is therefore considerably better detected by capacitive sensors than dry wood.

Dielectric constants (ε_r) of various materials			
Air, vacuum	1	Perspex	3.2
Teflon	2	Araldite	3.6
Wood	2…7	Bakelite	3.6
Paraffin	2.2	Quartz glass	3.7
Petroleum	2.2	Hard rubber	4
Terpentine oil	2.2	Oiled paper	4
Transformer oil	2.2	Pressboard	4
Paper	2.3	Porcelain	4.4
Polyethylene	2.3	Laminated paper	4.5
Polypropylene	2.3	Quartz sand	4.5
Cable compound	2.5	Glass	5
Soft rubber	2.5	Polyamide	5
Silicone rubber	2.8	Mica	6
PVC	2.9	Marble	8
Polystyrene	3	Alcohol	25.8
Celluloid	3	Water	80

Table 2

Object detection
Page 660

Capacitive sensors (e.g. KL 18) detect the quantity of the isolated bulk material through container walls with a thickness of up to 4 mm.
Level measuring
Page 656

The capacitive sensor (e.g. KL 08) detects the level of a reservoir for liquid refrigerant.
Level measuring
Page 658

For level control in a transparent container filled with pills, a capacitive sensor (e.g. KD 12) is used.

SmartPlug

Plug-in intelligence

MFI Inverter
from Page 668

- *Inverts NPN to PNP or PNP to NPN devices, and N.C./N.O. also adjustable*

MFC Counter
from Page 670

- *Adjustable counter (pulses or intervals) between 1 … 65535 ms*
- *Count parts*
- *Parts from results*
- *Flip-flop*

MFT Timer
from Page 672

- *Adjustable on-delay or drop-out delay between 1 … 65535 ms*

MFF Frequency
from Page 674

- *Adjustable frequency monitoring between 15 … 1000 Hz*
- *Monitoring standstills*
- *Monitoring rotary speeds*
- *Detection of accumulations*

SmartPlug saves you from using expensive timing elements or supplementary control elements because SmartPlug makes the sensor smarter. Connected with SmartPlug, your sensor takes over additional control functions. As a timer, counter or inverter, for monitoring frequency, or for on-delay or drop-out delay. Adjustment of the classic MFC, MFI, MFT and MFF takes place using teach-in via a control line. The new universal genius MFU is programmable with a PDA (palm) or notebook via an infrared interface. Every variant of SmartPlug can be cascaded so that counters and timers, for example, can be combined.

SmartPlug is suitable for sensors from all producers with standardised M12 plugs; a special adapter cable is available for connection to an M8 plug. SmartPlug accommodates its refined electronics in a small, easy-to-handle 60 × 20 mm² plug housing. With its maximum output current of 400 mA, the SmartPlug can also be used as a switching amplifier. SmartPlug: plug-in intelligence!

SmartPlug is also compatible with sensors from other producers.

TYPICAL SENSOPART

- Very easy handling
- No installation costs, due to direct connection between sensor and cable
- Reasonably priced compared to conventional function modules
- Assists PLC programs in time-critical functions
- Can be used as a switching amplifier up to 400 mA
- User-friendly due to simple teach-in
- MFU model offers comfortable programming via infrared interface and/or notebook (USB)

MFW Wipe Function
from Page 676

- *Adjustable wipe function for falling or rising edges; time calculation 1 … 65535 ms*
- *Signal expansion*
- *Filter*

MFU Universal
from Page 678

- *All-in multifunctional switching device programmable via USB*
- *Freely programmable counter, inverter and timer*
- *Accessories for parameterisation available*

SmartPlug

System description

TYPICAL SENSOPART

- The smart solution for simple tasks

- Switching amplifier up to 400 mA

- Simple setting via external teach-in wire

- Compatible with all sensor producers

- Compatible with all methods of function: optic, ultrasonic, inductive, capazitive

- No supplementary installation required

- A product that evolved from practical use for practical use

SmartPlug MFC application:
counting parts in a container with the F 50
Switching takes place after every tenth object – a typical task in packaging.
SmartPlug MFC application:
counting gear teeth with the F 50
The rotations of a gearwheel can also be counted.
SmartPlug MFI 12 Inverter

Depending on the SmartPlug Type, the SmartPlug MFI 12 Inverter converts the signal of the connected sensor from PNP to NPN (MFI 12 PN4) or vice versa (MFI 12 NP4). The output function can also be switched via the control line (NO/NC).

SmartPlug MFC 12 Counter

The SmartPlug MFC 12 Counter counts the output pulses of the connected sensor. The sensor's output pulse is switched through on reaching the preselected number. The preselected number can be set via teach-in.

SmartPlug MFT 12 Timer

The SmartPlug MFT 12 Timer supplements the connected sensor with the time function on-delay or drop-out delay. Both functions can be set via teach-in. The default setting is a drop-out delay of 100 ms. With this setting, the SmartPlug can be used directly for lengthening very short switching signals so they are suitable for PLCs.

SmartPlug MFT application:
chain detection with the FMS 30
The SmartPlug causes an on-delay or drop-out delay so that the PLC can evaluate the rapid movement of the chain.
SmartPlug MFF 12 Frequency Monitor

The SmartPlug MFF 12 monitors the frequency of the incoming signals. The SmartPlug's output is activated if the actual frequency falls below about 5% of the programmed level, and the sensor's signal is put through. Counting the input frequency on the SmartPlug; monitoring standstills; monitoring rotary speed; detecting accumulations.

SmartPlug MFW 12 Wipe Function

The SmartPlug MFW 12 Wipe Function reacts to the rising or falling edge (adjustable via external signal) of the input signal from the sensor and generates a switching pulse. The duration of the switching pulse, during which the SmartPlug holds the switching output of the signal, can be adjusted between 1 … 65535 ms.

SmartPlug MFU Universal

The all-rounder! Whether as a counter, inverter or timer, for monitoring frequency or for on-delay and drop-out delay – the SmartPlug MFU offers universal use compatible with all sensors from familiar producers, and communicates with a PC or notebook via an infrared interface. A USB adapter is available for simple programming via the notebook. All functions can be combined with one another. In addition to configuration, the user-friendly software allows reading out of the set values and the storage (and thus re-use) of settings already made.

14

SmartPlug MFI

NPN/PNP converter / inverter; adjustable N.O./N.C.

PRODUCT HIGHLIGHTS

- Direct adaptation between sensor and connection cable
- Adjustable N.C. / N.O. function
- Simple settings via control line
- No additional installations necessary
- Switching frequency of up to 10 kHz
- Switching amplifier up to 400 mA

Functions	
Indicator	LED, red
Adjustment possibilities	PNP / NPN conversion and N.C. / N.O. inversion or NPN / PNP conversion and N.C. / N.O. inversion
Default setting	N.O.

Electrical data	
Operating voltage, $+U_B$	10 … 30 V DC[1]
Power consumption	≤ 10 mA
Input resistance	> 10 kOhm
Input frequency	≤ 10 kHz
Input pulse width	50 µs
Output current, le	≤ 400 mA
Protective circuits	Short-circuit protection
Protection Class	2[2]
Switching output	See Selection Table
Standard connection	1 Bn $+U_B$ 3 BU $-U_B$ 4 BK output

Mechanical data	
Dimensions	Ø 20 × 60 mm
Enclosure rating	IP 67[3]
Material, housing	Plastic PBTP / PA
Type of connection: input	M12 ×1 socket, 4-pin

Setting N.C./N.O. signal inversion

Setting of signal inversion is achieved via the "Teach Input" and "Input SmartPlug" signals.

Example:

1. The SmartPlug should invert the sensor signal
   a. Activate sensor (output is active)
   b. Connect and separate Teach input and $+U_B$
   (provide $+U_B$ pulse at "Teach Input").
   → FINISHED

The setting remains even in switched-off state.

2. The SmartPlug should not invert the sensor signal (default setting)
   a. Do not activate sensor (output is inactive)
   b. Connect and separate Teach input and $+U_B$
   (provide $+U_B$ pulse at "Teach Input").
   → FINISHED

PRODUCT HIGHLIGHTS

- Direct adaptation between sensor and connection cable
- Counting of pulses or intervals
- Simple settings via external teach-in
- No additional installations necessary
- Switch inverter (N.C./N.O. function)
- Flip-flop (on/off switching)
- Distributor (1 pulse per rotation)
- Number range: 1 … 65535
- Switching amplifier up to 400 mA

Settings

Setting of the preselected number is achieved via the "Teach Input" and "Input SmartPlug" signals.

If, for example, 4 pulses are to be counted, the setting can be carried out as follows (operating voltage is on):

1. Connect Teach Input with +U$_B$
2. Activate sensor 4 times (= 4 events) (the SmartPlug automatically detects 4 pulses at Input SmartPlug)
3. Separate Teach Input from +U$_B$ → FINISHED

After making this setting, the output of the SmartPlug is active during every fourth sensor signal. The setting is also retained when turned off. The counting process is reset when the operating voltage is switched on again. The default preselected time is 1 (pulse counter).

Settings

Setting of the delay period is achieved via the "Teach Input" and "Input SmartPlug" signals.

If, for example, a delay of four seconds should occur, the setting can be carried out as follows (operating voltage is switched on):

1. Connect Teach Input with +U$_B$
2. Actuate sensor for a duration of 4 seconds
3. Separate Teach Input from +U$_B$ ➜ FINISHED

After this adjustment, the SmartPlug has an on-delay of 4 s. The setting remains even when switched off.

The timer is reset when the operating voltage is switched on. In the default state the preselected time is set to 100 ms drop-out delay.

Settings

1. Adjust the sensor with its SmartPlug MFF12 on the target object so that the sensor reliably switches.
2. Set the object in the motion to be monitored (e.g. motor set to nominal speed).
3. Connect Teach Input with +UB and separate again.
   (Lay down U$_B$ pulse at Teach Input. Pulse must be at least as long as a complete movement cycle of the object.)
4. Finished: the SmartPlug output will be activated when the input frequency falls by more than 5%.

Accessories

Connection cables	From Page A-32

Accessories

Meeting all needs

Mechanical accessories
from Page A-4

- *Brackets for sensors*
- *Mountings for VISOR® and illumination*

Optical accessories
from Page A-16

- *Reflectors and reflective tape*
- *Lenses and protective casings*
- *Illumination*

A sensor rarely comes unaccompanied: accessories supporting their mounting, commissioning and use are of considerable importance for the reliable functioning of an automation solution. The characteristic practical orientation of SensoPart products is thus also evident in a particularly versatile and user-friendly range of accessories. In this section they are divided into categories: mechanical, optical and electrical accessories.

The mechanical accessories include everything that is involved in mounting and protecting the sensor: mounting brackets, blocks, rods and rails, brackets with protective hoops, stainless steel casings for hygienic areas and many others. All accessories are extremely robust and designed to meet practical demands. We thus offer clever, sometimes patented, detailed solutions that greatly simplify the mounting and fine adjustment of sensors, particularly in difficult locations, such as dovetail mountings or rotatable brackets.

Optical accessories include lenses as well as protective casings, external illumination such as ring and surface lights, and reflectors of differing designs, shapes and sizes. All SensoPart lenses offer high optical quality. We offer C-mount lenses as an alternative to integrated lenses especially for vision sensors when, for example, very high measurement distances are required.

Our electrical accessories include a great variety of cables and adapters, power supply units and switching devices, as well as interface components for the integration of supplementary functions. One example of the latter category is the SmartPlug – very popular amongst users – which expands switching sensors with logic and control functions such as counters, timing elements, inverters or frequency converters. The SmartPlug is simply plugged in between the sensor and the cable – a brilliant little product that is only available from SensoPart!

Electrical accessories
from Page A-32

- *Cables*
- *Converters*
- *Power supply units and switching devices*
Flexible: the bracket rotates around two axes, simplifying the fine adjustment of vision sensors.

Practical: sensors can be comfortably and precisely aligned after mounting with the help of rod brackets.

Versatile: SensoPart offers a comprehensive selection of reflectors and reflective tape: rectangular, square or round.

Robust: all mounting and bracket elements are extremely stable and offer additional protection for sensors when necessary.

Reflectors for LED Retroreflective photoelectric sensor

Part number / Article number	R1 / 904-51532
Description	Reflector in housing
Dimensions	19 × 73 × 8 mm³
Mounting	2 mounting holes M3
Temperature range	-20 … +60 °C
Suitable for	Retroreflective photoelectric sensor (LED)
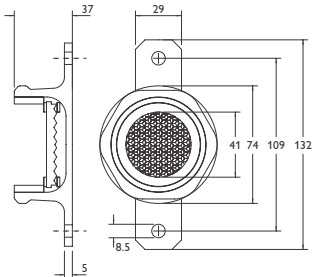

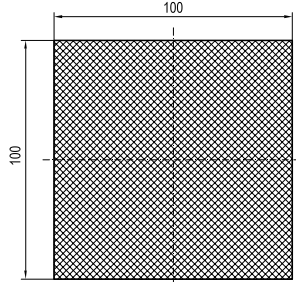

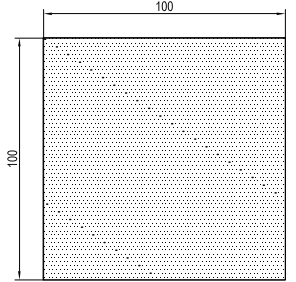

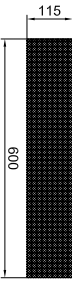

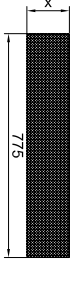

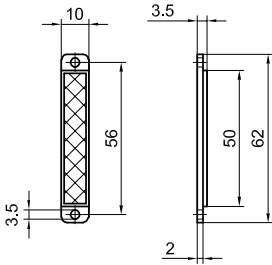

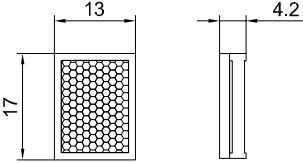

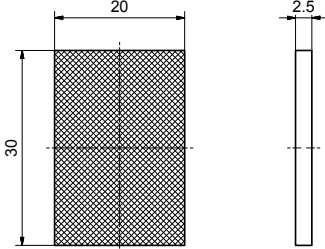

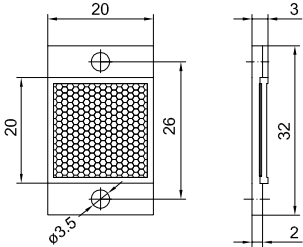

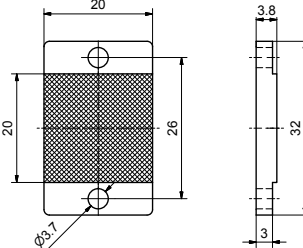

153-00068

Part number / Article number	R5 / 904-51533
Description	Reflector in housing
Dimensions	51 × 61 × 8 mm³
Mounting	2 mounting holes
Temperature range	-20 … +60 °C
Suitable for	Retroreflective photoelectric sensor (LED)

153-00069

Part number / Article number	R50 BC / 904-51641
Description	Reflector, chemically resistant for critical cleaning processes
Dimensions	51 × 69 × 8.1 mm³
Mounting	6 mounting holes
Temperature range	-20 … +140 °C
Suitable for	Retroreflective photoelectric sensor (LED)

ECOLAB®

153-00816

Part number / Article number	R100 BC / 904-51642
Description	Reflector, chemically resistant for critical cleaning processes
Dimensions	100 × 100 × 9.2 mm³
Mounting	2 mounting holes
Temperature range	-20 … +140 °C
Suitable for	Retroreflective photoelectric sensor (LED)

ECOLAB®

Reflectors for LED Retroreflective photoelectric sensor (Cont.)

153-00775	Part number / Article number	R128 / 904-51550
	Description	Reflector in housing, with protective glass for high robustness and high temperatures
	Dimensions	Ø 41 mm active area
	Mounting	2 mounting holes
	Temperature range	-20 … +300 °C
	Suitable for	Retroreflective photoelectric sensor (LED)
153-00071	Part number / Article number	RF 10 / 904-51536
	Description	Reflective tape
	Dimensions	100 × 100 mm^2
	Mounting	Self-adhesive
	Temperature range	-34 … +70 °C
	Suitable for	Retroreflective photoelectric sensor (LED)
153-00556	Part number / Article number	RF 10C / 904-51633
	Description	Reflective tape for FT 50 C colour sensor
	Dimensions	100 × 100 mm^2
	Mounting	Self-adhesive
	Temperature range	-40 … +70 °C
	Suitable for	FT 50 C
153-01012	Part number / Article number	RF 600x115 / 904-51540
	Description	Reflective tape for FMS 200-01 Analogue
	Dimensions	600 × 115 mm^2
	Mounting	Self-adhesive
	Temperature range	-40 … +70 °C
	Suitable for	Retroreflective photoelectric sensor (LED)
153-01015	Part number / Article number	RF 775x … mm / 904-51643
	Description	Reflective tape, choice of length, weatherproof
	Dimensions	775 × x mm^2
	Mounting	Self-adhesive
	Temperature range	-40 … +70°C
	Suitable for	Retroreflective photoelectric sensor (LED)

Reflectors for laser Retroreflective photoelectric sensor

153-00280	**Part number / Article number** — R1L / 904-51559 Description — Reflector in housing Dimensions — 10 × 62 × 3.5 mm³ Mounting — 2 mounting holes Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)
153-00771	**Part number / Article number** — R2-1LK / 904-51587 Description — Reflector in housing Dimensions — 13 × 17 × 4.2 mm³ Mounting — Self-adhesive Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)
153-00772	**Part number / Article number** — R3-2LK / 904-51588 Description — Reflector in housing Dimensions — 20 × 30 × 2.5 mm³ Mounting — Self-adhesive Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)
153-01047	**Part number / Article number** — R3-2LK1 / 904-51596 Description — Reflector in housing with very fine structure Dimensions — 20 × 30 × 2.5 mm³ Mounting — Self-adhesive Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)
153-00773	**Part number / Article number** — R2-2LB / 904-51586 Description — Reflector in housing Dimensions — 20 × 32 × 3 mm³ Mounting — 2 mounting holes Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)
153-001046	**Part number / Article number** — R2-2LB1 / 904-51595 Description — Reflector in housing, with very fine structure Dimensions — 20 × 32 × 3.8 mm³ Mounting — 2 mounting holes Temperature range — -20 … +60 °C Suitable for — Retroreflective photoelectric sensor (laser)

Reflectors for time-of-flight devices

Part number / Article number	RL 250 / 904-51562
Description	Reflector for ranges up to 50 m
Dimensions	248 × 248 × 4.5 mm³
Mounting	4 mounting holes
Temperature range	-20 … +60 °C
Suitable for	FR 90, FR 91

153-00483

Part number / Article number	RL 250/V / 904-51578
Description	Reflector for ranges up to 30 m
Dimensions	248 × 248 × 4.5 mm³
Mounting	4 mounting holes
Temperature range	-20 … +60 °C
Suitable for	FR 92

153-00483

Part number / Article number	RL 460 / 904-51565
Description	Reflector for ranges up to 80 m
Dimensions	460 × 460 × 4.5 m³
Mounting	4 mounting holes
Temperature range	-20 … +60 °C
Suitable for	FR 90, FR 91, FR 92

153-00485

Part number / Article number	RL 540 / 904-51571
Description	Reflector in housing for ranges up to 100 m
Dimensions	540 × 540 × 5.6 mm³
Mounting	4 mounting holes
Temperature range	-20 … +60 °C
Suitable for	FR 90, FR 91, FR 92

153-00484

A

Reflectors für time-of-flight devices (Cont.)

153-00486	**Part number / Article number** RL 660 / 904-51564 Description: Reflector for ranges up to 200 m Dimensions: 660 × 660 × 4.5 mm³ Mounting: 4 mounting holes Temperature range: -20 … +60 °C Suitable for: FR 90, FR 91, FR 92
153-00487	**Part number / Article number** RL 700 / 904-51570 Description: Reflector in housing for ranges up to 250 m Dimensions: 700 × 700 × 5,6 mm³ Mounting: 4 mounting holes Temperature range: -20 … +60 °C Suitable for: FR 90, FR 91, FR 92
153-00488	**Part number / Article number** RF 250 / 599-91009 Description: Reflective tape for ranges up to 50 m Dimensions: 250 × 250 mm² Mounting: Self-adhesive Temperature range: -20 … +60 °C Suitable for: FR 90, FR 91
153-00488	**Part number / Article number** RF 250/V / 904-51579 Description: Reflective tape for ranges up to 30 m Dimensions: 250 × 250 mm² Mounting: Self-adhesive Temperature range: -20 … +60 °C Suitable for: FR 92
153-01010	**Part number / Article number** Reflective tape / 904-51548 Description: Reflective tape Dimensions: 600 × 76 mm² Mounting: Self-adhesive Temperature range: -40 … +70 °C Suitable for: FR 85

Mounting of the reflectors as shown in the dimensional drawing or alignment according to labeling on reflector front.

Lenses

Lenses, C-mount

153-01024	Part number / Article number	LO C 8 / 526-51513
	Description	C-mount lens 8 mm focal length Aperture/focus: manual Filter thread: 30.5/0.5 Diameter: 33.5 mm Length: 28.2 Weight: 70 g
	Suitable for	V10 / V20 C-Mount
153-01025	Part number / Article number	LO C 12 / 526-51514
	Description	C-mount lens 12 mm focal length Aperture/focus: manual Filter thread: 30.5/0.5 Diameter: 33.5 mm Length: 28.2 mm Weight: 65 g
	Suitable for	V10 / V20 C-Mount
153-01026	Part number / Article number	LO C 16 / 526-51515
	Description	C-mount lens 16 mm focal length Aperture/focus: manual Filter thread: 30.5/0.5 Diameter: 33.5 mm Length: 28.2 mm Weight: 65 g
	Suitable for	V10 / V20 C-Mount
153-01027	Part number / Article number	LO C 25 / 526-51516
	Description	C-mount lens 25 mm focal length Aperture/focus: manual Filter thread: 30.5/0.5 Diameter: 33.5 mm Length: 36.0 mm Weight: 75 g
	Suitable for	V10 / V20 C-Mount
153-01028	Part number / Article number	LO C 50 / 526-51113
	Description	C-mount lens 50 mm focal length Aperture/focus: manual Filter thread: 30.5/0.5 Diameter: 33.5 mm Length: 38.1 mm Weight: 90 g
	Suitable for	V10 / V20 C-Mount

Surface light for V10, V20

Part number	Article number	Description
LF45 W-24-2L12	525-51147	Surface light, V10 / V20, white, 12-pin
LF45 R-24-2L12	525-51148	Surface light, V10 / V20, red, 12-pin
LF45 IR-24-2L12	525-51149	Surface light, V10 / V20, infrared, 12-pin*

153-00924
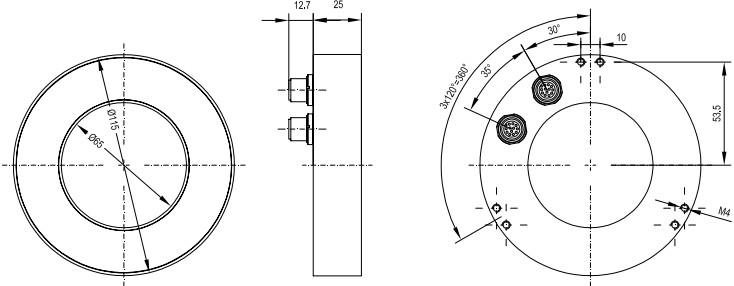

* External IR illumination can only be combined with IR Types or C-Mount sensors.
LED area lighting for incidental illumination in IP67 housings. Can be cascaded to illuminate from several directions.
No switching amplifier required.

Power supply units and switching devices

| Power supply units and switching devices		
153-00259	Part number / Article number	ST-05 / 997-51467
	Description	Sensor tester for PNP and NPN sensors – battery operated, 2 × 9 Volt (supplied) – with acoustic and optical signalling of switching output
	Part number / Article number	PA L4M4-TI / 997-51465
	Description	Teach-in unit for programming of SmartPlugs and sensors with Teach input – power supply voltage connection via 3-wire cable – M8 and M12 connection plugs
	Part number / Article number	Setup Box FR 85-2 ILLX / 533-11016
	Description	Setup Box for FR 85 Rail Pilot system. Enables parameterisation of the switching points of FR 85 via PC – Connection of power supply via plug M12, 5-pin – M12, 8-pin – Plug adapter M12, 8-pin to M12, 5-pin for the connection of FR 85 (5-pin) – RS232 interface for connection to PC – Gender Changer – Null modem adapter
	Part number / Article number	ST M12-12 / 994-51135
	Description	Power supply unit for V10 / V20, M12 connector, 12-pin, Europlug – connection of power supply voltage via Europlug – M12 connector
	Part number / Article number	ST M12-12-M / 994-51138
	Description	Power supply unit for V10 / V20, M12 connector, 12-pin, Multiplug – connection of power supply voltage via Multiplug – M12 connector
	Part number / Article number	ST V10 / 543-11022
	Description	Demo and Test Box for all V10 / V20 types. Allows test mode with simulation of inputs (triggers, etc.) and the display of outputs. All I/Os are through-wired, so parallel operation with controller also possible. Connections: – V10 / V20 via 12-pin, plug-in screw terminal – Trigger sensor via 9-pin, plug-in screw terminal and encoder input – PLC via M12 plug, 12-pin – Power supply via 9-pin, plug-in terminal – Power supply via small device plug – Display of switching outputs via LEDs – Operation of inputs via buttons; NPN / PNP selectable

SG 12

Power supply unit and switching device for standard rails

CE

PRODUCT HIGHLIGHTS

- DIN rail mounting
- Switch on/off delay
- Inversion of output

Functions		Dimensional drawing

LED indicator, yellow	Switching state indicator
Adjustment possibilities	Delay: rise / fall: 50 ms … 30 s
	Input impulse: ≥ 50 ms

090-12339

Electrical data		Mechanical data	
Operating voltage, +U_B (L1 - N)	See Selection Table	Dimensions	98.5 × 75 × 22.5 mm³
No-load current, I_0	16 mA at 230 V AC / 32 mA at 115 V AC	Enclosure rating	IP 40[2]
Switching output	Relay contact	Material, housing	Makrolon
Switching function	Change-over contact, potential-free	Type of connection	See Selection Table
Switching current	Max. 8 A	Ambient temperature: operation	-30 … +70 °C
Switching voltage	380 V AC / 250 V DC	Weight	250 g
Switching frequency (ti/tp 1:1)	≤ 10 Hz		
Duty cycle	1		
Output current, sensor	45 mA		
Power supply (V), sensor	24 V ± 10 % DC[1]		
Device input	PNP / NPN		
Repeatability	≤ 5 %		

[1] 2 % output ripple   [2] With connected IP 40 plug

Connection, non-inverted operation	Connection, inverted operation

154-00161

154-00162

Operating voltage	Type of connection	Part number	Article number
230 V AC (40 … 60 Hz)	Terminals	SG 12 T-00	688-51089
115 V AC (40 … 60 Hz)	Terminals	SG 12 T-02	688-51090

Version: 10/2013. Subject to changes; diagrams similar

IO Box

Expansion box for V10 / V20

PRODUCT HIGHLIGHTS

- Input/output expansion for V10, V20
- Transcribes sensor's serial data to discrete outputs
- 32 digital switching outputs for the discrete provision of up to 32 individual digital results
- 8 digital switching inputs, e.g. for changing over configurations
- Encoder input, e.g. for ejector control independent of conveyor speed
- Rail mounting
- Display for easy visualisation and operator guidance

Functions	
Programmable time function	Switch-on delay 0 to 7 s, switch-off delay 0 to 1 s, each adjustable in 1 ms increments via control panel.
Programmable counting function	Alternative to time function, 0 to 2000 encoder steps for switch-on delay, 0 to 200 encoder steps for switch-off delay (acc. to prescaler), each adjustable in individual steps via control panel, cache for 512 parts.
Ejector	2x potential-free relay contacts N.O. / N.C. (2 A / 24 V)

Dimensional drawing, IO Box

153-00795

Electrical data	
Operating voltage $+U_B$	20.4 … 26.4 V DC
No-load current, I_0	≤ 250 mA
Switching outputs	32x PNP (50 mA per output), total current max. 1 A
On delay, t_{On}, switching output	≤ 2 ms
Off delay, t_{Off}, switching output	≤ 2 ms
Inputs	8 ×
$U_{IN, HIGH}$ control/trigger inputs	> 18 V
$U_{IN, LOW}$ control/trigger inputs	< 3 V
Max. permissible cable length	Power 3 m, others 30 m

Mechanical data	
Dimensions	107.6 × 104.2 × 60.7 mm³
Enclosure rating	IP 20
Material, housing	Plastic
Connection system	Screw clamp contacts, plug-in
Ambient temperature: operation	5 … +50 °C
Ambient temperature: storage	0 … +50 °C
Vibration and impact resistance	EN 60947-5-2

Part number	Article number

Glossary

Adjustable focus

This is the area within which the focal position can be set, i.e. the area between minimum and maximum distance between the workpiece and the camera lens.

Ambient light

Apart from the light emitted by the transmitter, light from other sources can hit the receiver. This must not be permitted to lead to spurious switching.

Analogue output

The output of an analogue sensor, whereby the current or voltage signal provides the location information.

Analogue sensors

These provide a distance-proportional current or voltage signal as an output signal. The location of an object within the detection range is converted to a current or voltage value between 4 and 20 mA or 0 and 10 V.

Antivalent

In sensors with an antivalent output, the normally closed (N.C.) and normally open (N.O.) function are simultaneously provided at the corresponding connections. A 4-wire connection cable is required for this.

Auto-detect

Auto-detect combines a real PNP and a real NPN switching function in one sensor. On the basis of the load present, the sensor detects whether switching is necessary as a NPN or PNP output. Adaptation of the switching function takes place automatically.

Autocollimation principle

With retroreflective photoelectric sensors one speaks of the autocollimation principle when the light reflected from the reflector travels parallel to itself (i.e. within itself). Unlike the double-lens system, a retroreflective photo-electric sensor using the autocollimation principle has a very homogeneous and narrow optical path. Its switching point is largely independent of the entry direction of the target object.

The autocollimation principle
The double-lens system
Background suppression

Background suppression in photoelectric proximity sensors is a special process for detecting objects with differing surfaces and colours regardless of the background.

Bar codes

Bar codes consist of several bars and spaces that represent optoelectronically legible script. They are illuminated so that a light-sensitive sensor can detect the light beams (wavelengths) of the emitting element. The sensor receives the light reflected from the substrate. The data are thus read automatically and further processed electronically. The most familiar bar codes are 1- and 2-dimensional, whereby 2D codes can contain considerably more information.

Black/white- and grey/white-shift

The black/white-shift defines the difference in switching distance with measurement plates of differing reflectivity (reflectivity: white = 90 %, black = 6 %). The formula for the calculation used by SensoPart is: black/white-shift = [(switch-off point white − switch-on point black) / switch-on point black] × 100 %.

The grey/white-shift defines the difference in switching distance with measurement plates of differing reflectivity (reflectivity: white = 90 %, grey = 18 %). The formula for the calculation used by SensoPart is: grey/white-shift = [(switch-off point white − switch-on point grey) / switch-on point grey] × 100 %.

Blind zone

The area directly in front of the sensor within which no objects can be detected.

CCD

CCDs, Charge-Coupled Devices, are light-sensitive electronic components for transporting electrical charge. A CCD cell passes on its stored electrical charge to the neighbouring cell. The content of the storage cell is passed on to the next cell, as with an analogue shift register.

CMOS

A CMOS, a Complementary Metal Oxide Semiconductor, is an image sensor and light-sensitive component. It converts light falling onto it into a voltage.

Codabar

The Codabar is increasingly being replaced by new codes because of its high error rate. This code is a numerical code and is mainly used in libraries and health care.

Code 39

Code 39 is an alphanumerical, discrete and self-checking bar code and is used where an alphanumerical type of code is required.

Code 93

Code 93 is a continuous code and has a greater density of information than Code 39. The code's character set is identical to that of Code 39 and it is used when a higher information density and reliability is required.

Code 128

This code is based on the 128 representable characters of the ASCII code. Each character consists of 3 bars and 3 spaces of four different widths, with a total width of 11 modules. Apart from its high information density, Code 128 has been able to achieve a wide user community through its ability to represent the complete ASCII code.

Colour

Coloured CCD or CMOS imaging chips provide brightness values for the pixels of each colour channel, generally from 0 to 255. 0 means no light incidence, 255 means maximum light incidence. Coloured pictures are possible.

Colour sensors

These analyse the light reflected from an object according to its spectral composition, and can thus detect coloured objects and differentiate between them.

Correction factor

Refers to inductive sensors and is the reduction in the switching distance for damping materials that deviate from Fe 360 (ISO 630).

B

Glossary

Cycle time

This is the time required by a vision sensor to carry out the inspection task once.

Dark-switching

The switching output of a photoelectric sensor or a scanner is activated when no light hits the receiver. In this case, the downstream amplifier is activated and connected devices are switched on.

Receiver	Amplifier	Output (PNP)
Unilluminated	Activated	High
Illuminated	Not activated	Low

Datacode

Two-dimensional bar code.

DELTA function

See switching threshold adjustment.

Depth of field

The depth of field is the area in which an object in the object space of an imaging optical system can be sharply focused. Example: in the case of a contrast sensor with a scanning distance of 12 mm (focus) and a depth of field of ± 3 mm the sensor operates reliably in a zone between 9 and 15 mm.

Detector

A single inspection task in the VISOR®. Detectors are always part of the user settings for the VISOR® and are stored in a job.

Diffuse (energetic) sensor

A sensor with the transmitter and receiver accommodated in a single housing that can detect light diffusely reflected from the object. Whereby only the intensity of the reflected light is evaluated. Diffuse sensors can therefore only be used for object detection if no background is present or if it is necessary to differentiate between light and dark objects.

Diffuse reflection

Light hitting rough and uneven surfaces, in particular, is reflected in all directions.
Drag & drop

Drag & drop is a technique in graphic user interfaces with which graphic elements are picked up and moved (dragged) with the help of a pointer device and released (dropped) in the desired location.

EAN

EAN stands for European Article Number and is a 13-digit or 8-digit sequence of numbers. This international article number provides information about the article, e.g. the producer and the producing country.

ECC200

ECC200 is also called DataMatrix code and is a two-dimensional code. Compared to the linear bar code, considerably more information can be shown in a smaller space. The size of the code increases proportionately with the content. ECC200 codes can also be printed in a non-square shape.

Electromagnetic radiation spectrum

Only a very small part of the spectrum of all electromagnetic waves is visible to the human eye. The visible range begins at about 380 nm and stops at roughly 780 nm. The colours we perceive can be assigned to individual wavelengths.

Red light and infrared sensors are principally used as optical sensors. Red light offers the advantage that it is visible and thus simplifies the adjustment of sensors. Longer ranges, however, can be achieved with infrared light.
EN 60947-5-2

This is the European standard for optical sensors. It defines the limit values that sensors must maintain, e.g. regarding electromagnetic compatibility (EMC).

Enclosure rating (IP = ingress protection)

Uses a two-digit number to define the tightness of the sensor towards particles and dampness. The first digit stands for mechanical particles such as dust, the second digit stands for moisture particles, e.g. drops of water. The numbers mean differing values according to the following table.

First digit	Protection against contact	Second digit	Protection against water
0	Unprotected	0	Unprotected
1	Protection against foreign bodies > 50 mm	1	Protection against dripping water
2	Protection against foreign bodies > 12 mm	2	Protection against dripping water below 15°
3	Protection against foreign bodies > 2.5 mm	3	Protection against water spray
4	Protection against foreign bodies > 1 mm	4	Protection against water spray
5	Dust protection	5	Protection against water jets
6	Dust-proof	6	Protection against heavy seas
		7	Protection against immersion
		8	Protection against submersion (... m)
		9	High-pressure / steam jet cleaning

IP enclosure ratings, DIN 40 050, Part 9

B

Glossary

Encoder input

Sensors for determining changes in length (linear) or in angle (rotating) that can detect the path and path direction or angular changes and the direction of rotations are described as encoders or incremental encoders. Such a device can be directly connected to the vision sensor via the encoder input. The vision sensor can delay the output signals in dependence on the position and thus, for example, control an ejector that is not located directly alongside the vision sensor.

Ensured switching distance (operating distance, Sa)

The ensured switching distance takes into account all external influences and sample variances. It is roughly ≤ 80 % of the nominal switching distance. The sensor switches reliably within this range.

Ethernet (LAN)

This widespread producer-neutral technology allows data to be transferred to a Local Area Network (LAN).

EtherNet/IP (EIP)

EIP, also called Ethernet Industrial Protocol, is based on the TCP/IP and UDP/IP transport protocols and is an internationally accepted communication network using the Ethernet. In industry, the EIP thus forms a broad basis for effective data communication.

Exposure time

The illumination duration of, for example, a line sensor. It defines how long the detection line is illuminated. Increasing the exposure time can raise sensitivity (with a simultaneous reduction in switching frequency).

Fibre-optic sensors

The transmitter and receiver are accommodated in a single housing. The light emitted by the transmitter is reflected by the target object and evaluated by the receiver. The advantage is that the transmitted and received light is transported to and from the object directly via a fibre-optic cable – even when space is very limited.

Field of view

The field of view is the area within which objects can be detected.

Focal length

The focal length is the distance from the focus to the lens, also called the focal point. It is measured in millimetres. The greater the focal length of a lens, the smaller the field of view, and the larger and nearer the image appears.

Focus position

This is the location of the focal point in relation to the workpiece surface.

Fork width

The fork width is the distance between the transmitter and receiver of a fork photoelectric sensor.

GS1

The GS1 is a special form of Code 128. It is used in both commerce and industry. The length of the code is variable, but should not exceed the maximum length of 165 mm. A maximum of 48 useful characters can be coded. Because several pieces of data can be coded simultaneously it is also possible to record weight information and the sell-by date on, for example, the bar code of a food pallet.

Hysteresis

The difference between the sensor's switch-on point and switch-off point. It is measured in per cent (related to the switch-on point).

2/5 Industrial

The 2/5 Industrial code is a very simple, self-testing code with a high tolerance. Because of its simplicity it has a low information density, resulting in a relatively high space requirement. It is used, for example, in warehouses and on flight tickets.

2/5 Interleaved

The Interleaved 2 out of 5 code is a numerical, sequential and self-testing code. It is used wherever bar codes are to be attached in compact form. This would be, for example, with difficult surfaces such as outer wrapping made of corrugated cardboard or when the bar code is to be read from a long distance.

Infrared light

Light with wavelengths above that of visible light. The wavelength range of infrared light starts at about 780 nm.

Inspection program

An inspection program is a sequence of instructions in Eyesight.

Jitter (electrical)

Jitter is a measure of the accuracy of the response time. For example: with a max. response time of 20 µs and a jitter of 5 µs, the actual response time is 15 - 20 µs.

Job

Contains all the user settings necessary for operating the VISOR®. These are the basic settings such as resolution, exposure time, interfaces as well as the detectors with their settings.

Laser Protection Class

All devices that contain a laser light source must be assigned to one of the four laser Protection Classes with their corresponding sub-classes (Class 1, 1M, 2, 2M, 3R, 3B and 4). The laser Protection Classes are specified in the DIN EN 60825-1/2001-11 standard.
All current sensors from SensoPart are either in Classes 1 or 2 (not 1M or 2M – see data sheets). The relevant text in the standard is paraphrased below:

Class 1
Lasers that are safe under reasonably predictable operating conditions; whereby the use of optical instruments for the direct observation of the beam is included.
Class 2
Lasers that emit visible radiation at a wavelength between 400 nm to 700 nm; whereby the eyes are usually protected by aversion responses including the eyelid closing reflex. One can expect that this reaction offers appropriate protection under reasonably predictable operating conditions; whereby the use of optical instruments for the direct observation of the beam is included.

B

Glossary

Light-switching

The switching output of a photoelectric sensor or scanner is activated when light hits the receiver. In this case, the downstream amplifier is activated and connected devices are switched on.

Receiver	Amplifier	Output (PNP)
Unilluminated	Activated	High
Illuminated	Not activated	Low

Limit frequency

The frequency at which the amplitude of an analogue signal has fallen to about 70% (3 dB).

Linearity

A measure of the quality of the characteristic output curve. The sensor's electrical signal is processed and linearised. The characteristic curve thus obtained shows slight deviations from an exactly straight course, defined in per cent as linearity or linearity deviation.

Max. output current

The maximum current with which a load at the switching output can be operated.

Monochrome

Monochrome CCD or CMOS image chips provide a grey value for every pixel. From 0 to 255 with 8 bits. 0 means no light incidence (black), 255 means maximum light incidence (white).

Multi-colour RGB evaluation

During teach-in, contrast sensors with RGB illumination (red, green, blue) select the transmission colour that provides the largest contrast difference between the mark and the background. In operation, the sensor will then only work with this transmission colour.

No-load current

The current consumed by the sensor itself.

NPN output

The NPN output switches a load connected to the positive pole through to the negative pole.

Operating voltage

The voltage range that the sensors need for operation. This is generally 10 … 30 V DC for optical sensors.

PDF 417

This is a 2D code and is based on stacked bar codes. The characters used are encoded in code words. A code word consists of 17 modules, each made up of 4 bars and 4 spaces.

Pharmacode

This code is the standard bar code for the pharmaceutical industry, e.g. for checking the presence of package inserts. The information is coded in the bars. The code value is calculated by adding up the individual bar values. There are narrow and wide bars. This code offers extremely rapid readability and is not sensitive towards print tolerances.

Photoelectric proximity sensor

A sensor in which the transmitter and receiver are accommodated in a single housing and which detects the diffuse light reflected from the object. Whereby it is not the intensity of the reflected light that is evaluated. Diffuse scanners can therefore only be used for object detection if there is no background or when it is necessary to differentiate between light and dark objects.
Pixel

Also called picture element, it is the smallest image unit in digital projection systems. These are the individual grey or colour values in a digital raster graphic as well as the surface elements of an image sensor for representing a grey or colour value.

PNP output

The PNP output switches a load connected to the negative pole through to the positive pole.

Polarisation filters

Polarisation filters are optical filters that can be compared with a grid of lines. Incidental light that oscillates in all directions is filtered and only light that is oscillating parallel to the lattice plane is let through.

Highly reflective objects can be reliably detected by using a polarisation filter in combination with a retroreflective photoelectric sensor and a prismatic reflector.
Polarised light

Light that only oscillates on one plane.

Prismatic reflectors

A prismatic reflector consists of densely packed pyramidical individual reflectors. As a result of its structure it reflects the incidental light back into itself. In addition, the polarisation plane of the light is rotated by 90°.

B

Glossary

Push-pull

With push-pull a complementary pair of transistors (N-channel and P-channel) is used as the output stage. The sensor can therefore be operated as both a PNP and NPN device.

QR code

A quick-response code is a two-dimensional binary code that represents computer-legible text. It appears, for example, in newspapers, and can contain information such as text or Internet addresses.

Range/scanning distance or detection range

The area within which the sensor reliably detects objects.

Red light

In certain applications it can be helpful to change the colour of the light of the vision sensor. Red light generally achieves a better contrast on grey metal surfaces, in particular.

Reference material

A standardised reference material that is used for specifying sensors. A typical reference material would be Kodak paper with varying reflectivity levels (e.g. 90% white, 18% grey, 6% black).

Reflection

When a light beam hits a reflective object it is reflected as a result of the object's surface properties. The structure of the surface influences the type of reflection.

Reflection loss

As a result of the surface structure there is always reflection loss when reflectors are used. The imprecision of the surface is responsible for the level of loss. Highly reflective, polished mirrors have, for example, only low losses. The reflection loss also leads to the defined range being reduced when deflector mirrors are used.

Reflectivity

Reflectivity is the reflection of light by non-transparent surfaces. In the case of proximity sensors, the scanning distance is often defined in relation to the level of surface reflectivity. Black surfaces have a low level of reflectivity. White surfaces have a very high level of reflectivity. As a result of this property, the scanning distance of diffuse scanners is heavily dependent on the surface characteristics and colour of the target object.

Repeatability

This is the measure of the conformity of repeat measurements under the same conditions.

Resolution

The number of horizontal and vertical picture elements (pixels). The higher the number of pixels, the smaller the details that can be detected within the search area.

Response time

The time the sensor requires to show a detected object at the switching output is the maximum response time.

Retroreflection

As a result of the special design of the surface of reflectors it is possible to reflect the light beam in the same direction as it hits the reflector. Retroreflective photoelectric sensors can use this special construction of the reflector optimally because the light hitting the reflector is largely reflected back to the sensor.
Retroreflective photoelectric sensor

In a retroreflective photoelectric sensor the transmitter and receiver are accommodated in a single housing. The light emitted by the transmitter hits a reflector and is reflected back. The receiver evaluates the returning light. The advantage lies in the small size of the reflector. It is also easy to install because it is a passive element, i.e. requires no connections.
Reverse-polarity protection

This means that a sensor is protected against transposition of the positive and negative poles of the operating voltage.

Ripple

The maximum permissible fluctuation of the operating voltage for trouble-free operation. It is defined in per cent of the operating voltage.

RS422

The RS422 interface was developed for serial high-speed data transfer over long distances. The serial data are transferred without reference to Ground as a voltage difference between two corresponding cables.

Scanners with background suppression

These evaluate the location of an object and not the light intensity. They can therefore also detect, for example, dark objects against bright backgrounds, because they work (almost) independently of the intensity.

Short-circuit protection

The semiconductor outputs of sensors can be protected from short-circuits by taking special electronic measures. Whereby the electronics in the sensor constantly measures the output current. The output is switched off if it exceeds a certain value. The sensor returns to its normal operating state when normal conditions are restored.

SmartPlug

A multifunctional device for use with sensors, available as a timing element, counter, frequency monitor and inverter. All SmartPlugs work as switching current amplifiers to a maximum output current of 400 mA at a switching frequency of 10 kHz.

B

Glossary

Standby time / readiness delay

The time the sensor needs to be ready for operation after the operating voltage has been applied.

Switching distance (nominal switching distance, Sn)

The switching distance is the distance between an object and the active surface of a sensor at which a switching process is triggered. The switching distance does not take any external factors, such as temperature, supply voltage or sample variances, into account.

Switching frequency

The maximum frequency with which events can be detected. The reciprocal value of the switching frequency is the minimum time that an object must be in the detection zone in order to be detected.

Switching threshold adjustment (DELTA function)

DELTA – Dynamic Evaluation of Light for Threshold Adaption – describes the automatic adaptation of the switching threshold to changing environmental conditions (e.g. the gradual contamination of a reflector).

Teach-in

A process for setting optical sensors, whereby the sensor is adjusted for the process at the press of a button. The button is pressed when the object is in the detection zone of the sensor (with a time lock of 3 seconds to prevent unintentional adjustment). The sensor shows detection of the object by means of simultaneous blinking of the LEDs. The object is removed after releasing the button, and the button is pressed again for one second in order to store the signal value without the object.

Temperature drift

Temperature drift is the change of a physical value in response to a change in the (ambient) temperature.

Test input

Input with which the function of a through-beam photoelectric sensor can be checked. The laying down of a signal at the test input causes the transmitter to switch off, resulting in a change in the switching state of the receiver if the sensor is functioning properly.

Through-beam photoelectric sensor

Transmitter and receiver are physically separated and each requires its own power supply. Long ranges can be achieved with this system.
Total reflection

Total reflection occurs, for example, with highly reflective mirrors. Whereby the angle of light incidence is equal to the angle of reflection. In optimum cases reflection losses are insignificantly small.

Transmission

The penetration of a medium by radiation (e.g. light through transparent objects).

Triangulation

The light cone of the transmitter and the sensitive area of the receiver form a sectional plane. This is evaluated using triangulation. In the ideal case, only objects in the area of this sectional plane are detected. Objects that lie outside this sectional plane are ignored. Special proximity sensor designs can allow the position of the sectional plane to be changeable.

Sectional plane

Trigger input

An input with which the sensor can, for example, be timed. If, for example, the sensor should only detect objects at a particular point in time, a signal is provided to the trigger input within this time period and during the rest of the time the input remains signal-free and the sensor thus function-free.

Types of reflections

Direct reflection
Retroreflection
Diffuse reflection
Total reflection

UPC

UPC, Universal Product Code, is the forerunner of EAN and is still used in the USA.

Vibration and impact resistance

The stresses caused by vibrations or sudden loads to which a sensor may be exposed without function being impaired. The limit values for optical sensors are defined in the EN 60947-5-2 sensor standard.

Vision sensor

A vision sensor is an image-processing system that records pictures, evaluates them and then triggers a reaction. The sensor is optimised for a particular use or field of use. A vision sensor is characterised, above all, by the software interface and operation being designed in such a way that even users with little or no image-processing knowledge can operate it. After commissioning, a vision sensor carries out its inspection task autonomously – without an external PC.

Glossary

Vision systems

A vision system consists of a camera and software, generally with a larger scope of function than a vision sensor. A vision system is thus considerably more powerful, but far more demanding in terms of operation. After commissioning, a vision system carries out its inspection task autonomously – without an external PC.

White light

White light is used as a light source for colour sensors, contrast sensors, vision sensors and systems because it is a homogeneous spectrum and no mixture of different colours is required.

Window size

The area within which the transmitter and receiver elements of a frame light sensor are located is defined as the window size.

C
Type key

V 10 - OB - A 1 - W 12 D

V = Vision sensor

Resolution
10 = WVGA monochrom
20 = SXGA monochrom
10C = WVGA color
20C = SXGA color

Functionality
OB = Object
CO = Color
CR = Code Reader
SO = Solar
EYE = Eyesight

Performance
S = Standard
A = Advanced
P = Professional

Version

Depth of field (optional)
" " = depth of field = normal
D = depth of field = enhanced

Lens
6 = 6 mm
12 = 12 mm
25 = 25 mm
C = C-mount

Illumination
W = white LEDs
R = red LEDs
I = infrared LEDs
U = UV LEDs

FT 10 - RLH - PS - E4

Functional principle
FT = Photoelectric proximity switch
FR = Retroreflective photoelectric sensor
FE = Through-beam photoelectric sensor, receiver
FS = Through-beam photoelectric sensor, transmitter

Series
F 10

Sensor features
RL = red light laser, teach-in
RLH = red light laser with background suppression, teach-in
RLHR = red light laser with background suppression, teach-in, wide light spot
B-RLF1 = red light, fixed focus with background suppression, 15 mm (basic)
B-RLF2 = red light, fixed focus with background suppression, 30 mm (basic)

Connection
E4 = plug, M5, 4-pin
K4 = cable, 2 m, 4-wire
KM3 = pigtail, 200 mm, M8, 3-pin
KM4 = pigtail, 200 mm, M8, 4-pin

Switching output
PS = PNP, N.O. (default)
NS = NPN, N.O. (default)

FT 25 - RHD - PNS - M4M

Functional principle

FT = Photoelectric proximity sensor
FR = Retroreflective photoelectric sensor
FE = Through-beam photoelectric sensor, receiver
FS = Through-beam photoelectric sensor, transmitter

Series

F 25

Sensor features

C = red/green/blue colour sensor, teach-in
R = red light, teach-in
RA = red light distance sensor, teach-in
RL = red light laser, teach-in
RLO = red light laser, autokollimation principle, teach-in
RH = red light with background suppression, teach-in
RHD = red light with background suppression, teach-in, long scanning distance
RLH = red light laser with background suppression, teach-in
W = white light, teach-in
RGB = red/green/blue, teach-in
RGO = red light, for transparent objects, autocollimation principle, teach-in
RGO2 = red light, autocollimation principle, teach-in
RF1 = red light, fixed focus with background suppression, 60 mm
RF2 = red light, fixed focus with background suppression, 80 mm
RF = fixed setting

Connection

M4 = plastic plug, M8, 4-pin
M3M = metal plug, M8, 3-pin
M4M = metal plug, M8, 4-pin
K4 = cable, 2 m, 4-wire
KL4 = pigtail, 150 mm, M12, 4-pin

Switching output

PS = PNP, N.O. (default)
NS = NPN, N.O. (default)
PNS = auto-detect (PNP / NPN), N.O. (default)
GS = push-pull, N.O. (default)

FT 55 - RH - PS - L4

Functional principle

FT = Photoelectric proximity sensor
FR = Retroreflective photoelectric sensor
FE = Through-beam photoelectric sensor, receiver
FS = Through-beam photoelectric sensor, transmitter

Series

F 55

Sensor features

R = red light, teach-in
RL = red light laser, teach-in
RLO = red light laser, autokollimation principle, teach-in
RL2 = red light laser (Laser Class 2), teach-in
RH = red light with background suppression, potentiometer, long scanning distance
B-RH = red light with background suppression, potentiometer (basic)
RLH = red light laser with background suppression, potentiometer
RL2H = red light laser (Laser Class 2) with background suppression, potentiometer
RHM = red light with background suppression, metal housing, teach-in
RM = red light, metal housing, teach-in

Connection

L4 = plug, M12, 4-pin
K4 = cable, 3 m, 4-wire

Switching output

PS = PNP; S = N.O. (default)
NS = NPN; S = N.O. (default)

Active worldwide.
