Obtaining the Quality Image

1 The dot pattern in the emitting surface can produce inconsistent images.

Reducing inconsistent images produced by dot patterns

1. Open the lens aperture slightly.
2. Focus on the object precisely.
3. Adjust the height of the Light. (Install it outside the focal depth.)
4. Adjust the light intensity. (Suppress reflections and shining.)
5. If the light is too bright, increase the shutter speed of the camera.

2 Ambient light can reflect from the surface of the Light or object, which can affect the captured image.

Preventing the effects of ambient light

1. Install a hood or otherwise to block the ambient light.
2. For red light, mount a Sharp-cut Filter on the lens.
3. Increase the shutter speed of the camera. (Close the lens aperture slightly.)

Application Precautions

The captured image can be affected by dirt and dust on the surface of the Light.

Preventing the Effects of Dirt and Dust

- Handle the Light carefully to keep it clean from dirt, dust, and fingerprints.
- Do not wipe off dirt or dust with your fingers. Blow them off with air.
- If the Light becomes contaminated with fingerprints, wipe them off with a fine, soft cloth.
- If the Light becomes very dirty, wipe it off lightly with a thin solution of neutral detergent.

Luminescent spots may result from foreign matter in the emitting surface. These are within CCS inspection standards and do not indicate faults in the product.

2. Important Information for Equipment Safety

-Read Before Use-

Incorrect usage of the product may result in fire, electric shock, or other serious damages. Please ensure to follow the conditions below.

■ The following symbols are used in this instruction guide to indicate and classify the relative importance of warnings and cautions.

	Warning	Indicates that incorrect usage may result in serious injury or death.
	Caution	Indicates that incorrect usage may result in injury or property damage.

■ The following symbols in the instruction guide indicate and classify the precautions.

PROHIBITED	DISASSEMBLY PROHIBITED	DO NOT TOUCH	DO NOT SUBJECT TO MOISTURE
These symbols mean the prohibited action.			
INSTRUCTED			
These symbols mean the necessary action must obey.			

 Warning			
Do not disassemble or modify the product. Doing so may result in fire or electric shock.	 DISASSEMBLY PROHIBITED	LED light radiation may cause corneal or retinal abnormalities if you look directly at the light. To prevent harmful light exposure, never look directly at the LED light.	 INSTRUCTED
Do not touch the product with wet hands. Doing so may result in electric shock.	 DO NOT TOUCH WITH WET HANDS	This product generates high temperatures. Do not touch the product while it is turned on or immediately after it is turned off, or burning may result. Provide cooling with a fan or other ventilation if the product is to be used in a closed space.	 INSTRUCTED
Make sure that the product is free of moisture or any liquid. Exposure to water may result in fire, electric shock, or product failure.	 DO NOT SUBJECT TO MOISTURE		
Connect or disconnect the light cable only after turning off the power supply for the LED light. Failure to do so may result in circuit damage, fire caused by a minute spark, or electric shock.			 INSTRUCTED
If abnormal condition occurs such as fuming, heat, smell, noise, or so on, stop using the product immediately, and turn the power off. A fire or electric shock may result if the product is kept used.			 INSTRUCTED

 Caution			
Do not use user-made cables. Doing so may cause product failure. Use the optional extension cable if it is necessary to extend the distance between the light and the power supply.	 PROHIBITED	Do not drop the product or subject it to impact. Doing so may cause the product to malfunction.	 PROHIBITED
Be careful of static electricity. Damage to the LED light may occur, if a person charged with static electricity touches it. Keep the product away from all items charged with static electricity.	 PROHIBITED	Make sure that the length of the extension cable is less than 5m. If the extension cable is longer than 5m, the voltage applied to both ends of the LED light will drop due to the DC resistance of the cable. The rated voltage will not be attained for 100% radiant ability, and the radiant quantity will drop as a result.	 INSTRUCTED

Note: Before using Infrared LED Lights, read the enclosed *Handling Precautions for Infrared LED Lights*.

Preparation to capture images

1. Turn on the power supply for the LED light.
2. Focus the imaging device, such as a camera, onto the inspection object.
3. Adjust light range, light angle, and radiant quantity to optimize images.

Note: When using white LED lights with color image processing equipment, readjust the white balance for the camera approximately 60 minutes after turning on the power.

- Imaging example -

To obtain the optimal image

1. Image irregularities and moire* may occur due to the dot pattern on the light guide diffuser.

*moire: A periodic stripe pattern made as a result of mutual interference between the geometric dot pattern of the lighting and the pixel pattern of the CCD.

■ How to decrease image irregularities and luminescent spots caused by the dots

- Open the F-stop as much as possible.
- Bring the inspection object into focus.
- Adjust the position of the light. (set outside of the focal depth)
- Adjust the radiant quantity. (control reflection and shining)
- Use a shorter exposure time and adjust the radiant quantity.

Note: Luminescent spots may result from foreign matter contained in the light guide diffuser, but these are within the CCS inspection range and do not constitute a malfunction.

2. When the ambient light is reflected from the surface of the light or the surface of the object, the captured image may be affected.

■ Methods for preventing the effects of ambient light

- Attach a sharp-cut filter. (effective for red light)
- Make the exposure time of camera shorten and adjust the radiant quantity.
- Prevent the entry of glare by shroud.

3. Dirt or dust on the surface of the light may affect the captured image.

■ Dirt and dust removal methods

- Handle the light with care. Make sure no dirt, dust, or fingerprints get on the light.
- Remove dirt and dust by blowing air rather than by hand.
- Use a soft, finely woven cloth to wipe away any marks such as fingerprints.
- Use diluted neutral detergent to remove any heavy dirt.

● Efficient Use of LED Lights

LED lights generate heat that decreases radiant quantity and speeds degeneration. Follow the instructions below in order to suppress the heat of LED lights and prevent decreases radiant quantity and speeds degeneration.

- Use the light with the light level turned as low as possible.
- Only turn light on during imaging.
- Installing a fan or providing air flow for heat dissipation.

When connecting a power supply to this product, use following CCS Power Supply Units for the LED light. Select a power supply to match the application and purpose. When making the selection, confirm that the total power consumption of the connected lights will be within the power supply output power specifications. Read the Instruction Guide of the power supply for the LED light before use.

● Digital Power Supply (Pulse duty control)

The digital power supply is able to control radiant quantity with a PWM light control system.

● Analog Power Supply (Constant voltage control)

The analog power supply providing stepless intensity control through variable voltage control.

Note: This product does not support overdrive power supplies.

Please contact CCS Inc. about an other power supply.
