

LFR-250

Model	LFR-250
Voltage	12V DC
Power consumption	9.0W
Mass	1080g
Connector type	2P (1: +, 2: -)

Third Angle Projection Units: mm

Flat-ring Lights

LFR/LKR Series

Evenly diffused top lighting

Overhead diffuse light eliminates LED glare and shadows for even illumination

Thin flat ring using CCS light conduction

The LEDs are arranged on a flexible board in a straight line, and then wrapped around the perimeter of a light diffusion plate. This channels the light directly from the LEDs into the light diffusion plate.

In addition, a reflective film is applied to the surfaces of the light diffusion plate to refract and scatter the light in a complex way after it is introduced from the emitters. The light will spread evenly through the entire light diffusion plate and produce a very even light distribution.

Patent Pending

Even illumination without shadows (LKR)

LKR Series. Light shines from the conical emitting surface at all angles, making it possible to evenly illuminate the work without forming shadows.

LKR-70-8

Solder joint inspection for chip components on printed circuit board.
FOV 10mm, LWD 10mm
No hot spots, uniform illumination, only the solder joints stand out in white.
Lighting: LKR-70A

Illumination structure of LFR-100

Light from the LEDs around the periphery of the light diffusion plate is scattered and reflected within the plate to create diffuse light that illuminates from directly overhead.

Examples of Flat Ring Illumination Images

Inspecting for nicks on a glass bottle

Normal areas of the bottle appear illuminated as a white ring. Broken parts can be detected as dark spots within the rings.

Light used: LFR-100

Inspecting characters on a QFP package

The characters are illuminated with good contrast.

Light used: LFR-130

Inspecting of stains on plastic caps

The stains on inside and bottom face of plastic caps can be detected.
