

### Ultrasonic sensors for high precision detection of clear and transparent objects

- Clear object detection, inspection on transparent or highly reflective film and liquid level measurement
- Standard M18 tubular and M18 right angle mounting
- 50...500 mm Background and Foreground Suppression
- Teach-in push button or remote input for distance range setting
- Auto-Window function
- Standard M12 4-pole connector and M12 5-pole connector
- PNP or NPN outputs for object detection and 0-10 V or 4-20 mA analog outputs for distance measure
- IP67, NEMA 6P-rated

#### **APPLICATIONS**

- Packaging machines
- Beverage & Bottling
- Automotive assembling line

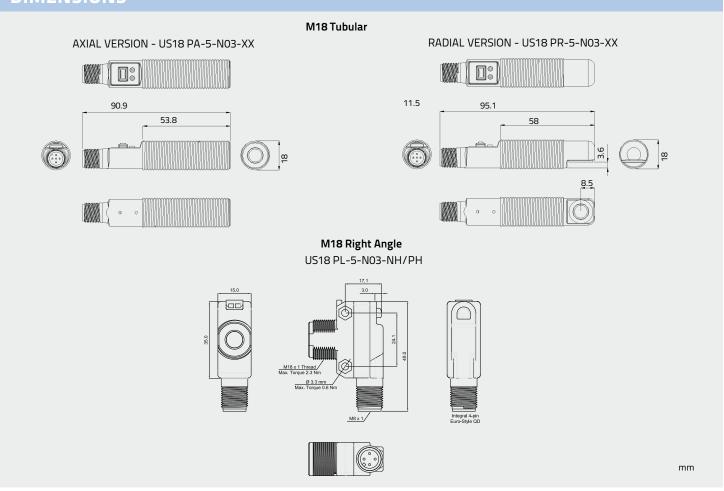

US18			
Tubular		30300 mm Analog model resolution: 0,5 mm (SLOW mode), 1 mm (FAST mode)	
Right angle		50500 mm Repeatibility: 0,7 mm	
Power supply	Vdc	1030 V (US18 tubular), 1230 V (US18 right angle)	
	Vac		
	Vac/dc		
Output	PNP	•	
	NPN	•	
	NPN/PNP	•	
	relay		
	other	010 V, 420 mA Analog (US18 tubular)	
Connection	cable		
	connector	•	
	pig-tail		
Housing material		Plastic	
Mechanical protection		IP67, NEMA 6-P	

### **TECHNICAL DATA**

	US18-PA/PR-5-N03	US18-PL-5-N03		
Operating distance	30300 mm	50500 mm		
Housing Type	M18 tubular M18 Right Angle			
Power supply	1030 Vdc	1230 Vdc		
Ripple	10% max.			
Current consumption	65 mA max.	25 mA max.		
Output current	100 mA	A max.		
Output saturation voltage	1,6 V max.	3 V max.		
Output	PNP and NPN  010 V or 420 mA analog output			
Delay at powering	300 ms			
Response time	8 ms (NPN/PNP) 2,5 ms (Analog out. FAST mode) 30 ms (Analog out. SLOW mode)	15 ms		
Switching frequency	62,5 Hz (NPN/PNP) 200 Hz (Analog out. FAST mode) 16 Hz (Analog out. SLOW mode)	32 Hz		
Repeatibility	0,5 mm	0,7 mm		
Indicators	yellow/green OUTPUT LED red/green RANGE LED red POWER LED yellow/red OUTPUT LED			
Setting	Teach-in push-button or remote input			
Ultrasonic emission frequency	300 kHz			
Minimum detection window	5 mm			
Operating temperature	−25+65 °C −20+60 °C			
Vibration	0.5 mm amplitude, 10 55 Hz frequency, for every axis (EN60068-2-6)			
Shock resistance	11 ms (30 G) 6 shock for every axis (EN60068-2-27)			
Housing material	thermoplastic polyester ABS			
Protection class	IP67, NEMA 6-P rated			
Connections	M12 5-pole connector	M12 4-pole connector		

### **DIMENSIONS**

#### **MAIN FEATURES**

The US18 ultrasonic sensors detection is indipendent from the target color, reflectivity and transparency, making them suitable for critical material applications.

The US18 series is designed to withstand hostile environments. IP67 and NEMA 6-P rated guarantee protection against water, dust, oil or coolant, enabling either indoor or outdoor use.

### **PRINCIPLES OF OPERATION**

Ultrasonic sensors emit one or multiple pulses of high frequency energy which travel through the air at the speed of sound. The sensor detects an object when a portion of this energy is reflected by the target and travels back to the sensor.

The sensor measures the total time required for the energy to reach the target and return to the sensor and the distance to the object is then calculated using the following formula

D = vt/2

D = distance from the sensor to the target

v = speed of sound in air

t = transit time for the ultrasonic pulse

#### **TEMPERATURE COMPENSATION**

The speed of sound is dependent upon the composition, pressure and temperature of the gas in which it is travelling. For most ultrasonic applications, the composition and pressure of the gas are relatively fixed, while the temperature may fluctuate.

Changes in air temperature affect the speed of sound, which in turn affects the distance reading measured by the sensor. An increase in air temperature shifts both sensing window limits closer to the sensor. Conversely, a decrease in air temperature shifts both limits farther away from the sensor. This shift is approximately 3,5% of the limit distance for a 20°C change in temperature.

The US18 ultrasonic sensors are temperature compensated. This reduces the error due to temperature by about 90%. The sensor will maintain its window limits to within 1,8% over the -20° to +60°C range.

### CONNECTIONS

#### M12 CONNECTOR

PIN		TUBULAR DIGITAL VERSION US18 PA/PROH	TUBULAR ANALOG VERSION US18 PA/PRIH/VH	RIGHT ANGLE US18 PLNH/PH
1	Brown	1030 Vdc	1030 Vdc	1230 Vdc
2	White	NPN OUTPUT	420 mA or 010 V	REMOTE TEACH (02 Vdc)
3	Blue	0 V	OV	OV
4	Black	PNP OUTPUT	530 Vdc (FAST mode) or 02 Vdc (SLOW mode)	OUTPUT (PNP or NPN)
5	Grey	REMOTE TEACH (02 Vdc)	REMOTE TEACH (02 Vdc)	-

#### **TUBULAR**

The **US18-PA/PR-5-N03 tubular** version sensors are excellent foreground and/ or background suppressors and guarantee a small blind zone providing a wide operating range from 30 to 300 mm.

The standard M18 tubular shape and the two different directions of acoustic emission, axial and radial, offer comprhensive solutions of installation. Connecting properly the output pins is possible to set the sensor in FAST mode (down to 2,5 ms of response time) or in SLOW mode (30 ms). Speeding the output response means reduce the resolution. Slowest applications will allow to detect smaller objects.

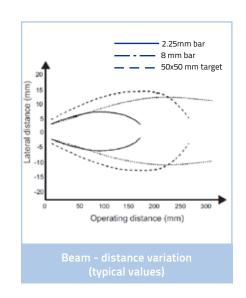

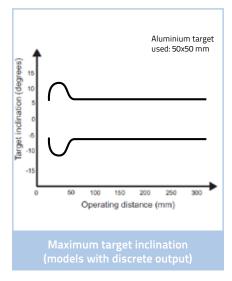

The series offers models either with discrete or with analog output.

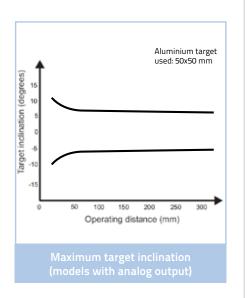

The Teach-in procedure is simple and allows to set the minimum and maximum values or to fix a switching window with 10 mm width in the models with discrete output (Auto-Window function).

The models with analog output are conceived as distance sensors and the output signal can be scaled on windows of any width inside the operating range or positioned at the centre of a detection window with a fixed width of 100 mm (Auto-window function).

### **DETECTION DIAGRAM**

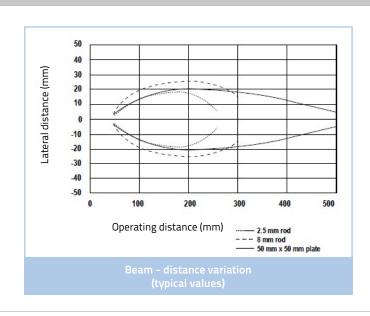

#### **RIGHT ANGLE**

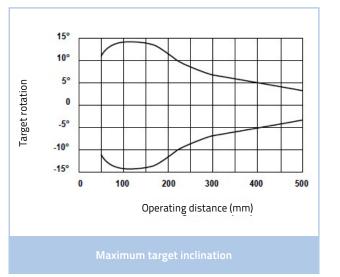

The **US18-PL-5-N03** right angle sensor is able to detect directly the objects, without any separeted receiver unit, performing the foreground and the background suppression with an extremely reduced blind zone and operating distances from 50 to 500 mm.

This model provides discrete outputs (PNP or NPN) through a M12 4-pole standard connector, active when the maximum and minimum detection thresholds are exceeded, making this sensor very suitable for objects detection in limited space and very subject to light reflections.

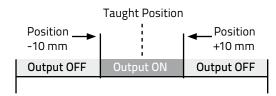

### **DETECTION DIAGRAM**

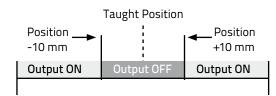

#### Normally Open operation

#### Normally closed operation

The sensors are easily configured through the Teach-in function, fixing the minimum and maximum limits in which the target has to be detected or centering a 20 mm window on the taught position when the Auto-Window feature is used.

#### **SETTING**

Two TEACH methods may be used to program the sensor:

- teaching individual minimum and maximum limits
- using Auto-Window feature to center a sensing window around the taught position

The sensor may be programmed either via its push button, or via a remote switch.

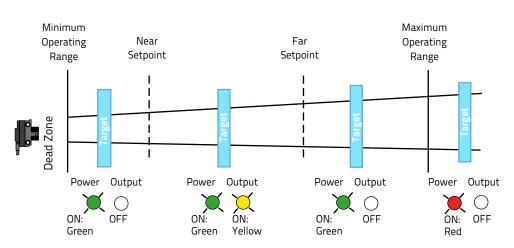

Remote programming also may be used to disable the push button, preventing unauthorized personnel from adjusting the programming settings.

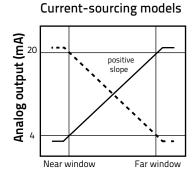

The operating status is reported by two color LEDs:

red POWER LED when the target is weak or outside sensing range, green POWER LED when the target is good and the sensor is operating normally

yellow OUTPUT LED when the target is within the window limits, red OUTPUT LED when the sensor is in TEACH mode

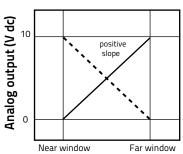

#### **TEACH** interface

#### Voltage-sourcing models

Target position

#### M18 TUBULAR - ANALOG VERSION

The sensor may be programmed for either a positive or a negative output slope, based on which limit is taught first:

- if the Near limit is taught first, the slope will be positive
- if the Far limit is taught first, the slope will be negative

The analog output signal, is automatically distributed over the width of programmed sensing window (linearity: ±1 mm in FAST mode, ±0,5 mm in SLOW mode).
